PUBLISHERS' STATEMENT.

A NEW WEBSTER'S DICTIONARY.

The great work of Noah Webster has received from time to time a succession of revisions by competent scholars, by which it has been kept abreast of the swift growth of the language. In the **International Dictionary** we offer to the public a new revision, the product of the labour of a large body of workers during more than ten years. Of the present book it may be said that, in the thoroughness and completeness of its reconstruction, it surpasses even the edition of 1864. We have at various times, in the intervals of the great revisions, added supplements and appendixes, but in a broad view it may be said that three dictionaries have been successively constructed upon the foundation laid by Dr. Webster. The first was the book of 1847, which was little more than the original work of 1828 brought from two volumes into one, pruned of some excrescences, and with moderate additions. The next was the book of 1864, in which the more scientific principles of modern lexicography were applied, and a large store of additional matter was included. Following the several supplements by which that book has been enlarged, we now present Webster's INTERNATIONAL DICTIONARY, which embodies substantially the amplification and enrichment of the language during another generation.

A NEW TITLE.

Upon the issue of an edition so materially altered and improved as the present one is, the occasion seemed appropriate for a modification of the title. In naming it "Webster's International Dictionary," we recognize that the language of the mother-country now encircles the globe; that the literature of each of its branches is the common possession of all; that not only through the literary, but also through the popular, speech of all these peoples there runs a unity of structure, a common vocabulary, and a substantial identity of the entire language, compared with which local variations are but trifling. Any complete dictionary of this language must be so comprehensive in its scope, and at the same time so true to those canons of the best usage which are everywhere acknowledged, that it shall be serviceable to the inhabitants of Great Britain, of the United States, of Canada, of Australia, and to the English-speaking population of India and of Africa. The Londoner, reading a story of Bret Harte, will turn to such a dictionary for the slang of a California mining-camp, and the Melbourne merchant will consult it for the usage of the New York Stock Exchange. Beyond any other modern or ancient tongue, the English is coming to be a world-speech. The extension over the earth of the race-elements that use it as their mother-tongue, and the strengthening bond of unity among all English-speaking peoples, are among the most significant and beneficent facts of the age. It is in recognition of this, and of the wide use of Webster's Dictionary as an authority in Great Britain and its dependencies, as well as in the United States, that the present edition is distinctively called "The International."

AN ESSENTIALLY NEW BOOK.

A reference to the Preface will show something of the amount of labour and scholarship bestowed upon the volume. The preceding edition, with all its supplementary matter, has been re-studied line by line. A close comparison has been made with a whole library of the most recent authoritative works in philology and in all branches of knowledge that include new usages of speech. Upon technical subjects specialists have been employed, and their contributions have been carefully harmonized in form with the general principles of the revision. Great care has been devoted to the pictorial illustrations; the number has been increased from three thousand to nearly four thousand, and about two-thirds of them are entirely new. There has been elimination of many errors, large amplification and enriching by new material, and a judicious conservatism toward those excellent definitions of standard words which were Dr. Webster's especial merit. Some increase of the amount of matter in the book was inevitable; it is partly represented by the enlarged page and the greater number of pages. But increase of size has not been sought, and the difference in bulk between this volume and its predecessor is no measure of the difference in value. A comparison of the two in any part, page by page, will reveal how frequent are the changes and how great is the improvement.

THE LABOUR AND THE COST.

The editing has been done under the supervision of the same editor-in-chief, and the same publishers, who conducted the previous revision. They began this revision, not as a speculative venture, but as a duty to scholars and to letters, before the signal of new rivalries was sounded. They have carried it patiently through to an unforced completion. They have not been obliged to omit any approved excellence of older editions on account of the vested rights of others; nor, on the other hand, have they been compelled to experiment in novelties in order to attract attention. Their labour has been directed to perfecting what was already acknowledged by eminent scholars to be **the Best.**

With what liberal expenditure of time and toil and money this duty to scholarship and to the public has been performed partly appears in the following statements:—

Work having direct specific reference to the publication of this Dictionary has been **in progress for over ten years.**

Not fewer than **one hundred paid editorial labourers** have been engaged upon it. Besides these, a large number of interested scholars have freely contributed in important ways to its completeness and value.

Within the ten years that the work has been in progress, and before the first copy was printed, there was expended in carrying on its various departments a sum **exceeding £60,000.**

These facts are presented as an assurance, which under existing conditions is due to the public, that **Webster's International Dictionary** is the rightful heir to the pre-eminent favour which for more than half a century has been given to the great work of **Noah Webster** and its successive revised editions

"CERTAINLY THE BEST PRACTICAL DICTIONARY EXTANT."—*Quarterly Review*, October, 1873.

The special principles observed in this revision are further set forth in the General Preface by the editor-in-chief, Dr Porter, and also in the introductions to the various topics comprised in the Appendix. Of the Appendix we may say here that the aim has been to perfect the vocabularies, tables, etc., in the former edition, and bring them fully up to the present date, rather than to make conspicuous additions of new features. In this respect, and in every respect, the purpose of the revision has been not display nor the provision of material for showy advertisement, but the due, judicious, scholarly, thorough perfecting of a work which in all the stages of its growth has obtained in an equal degree the favour and confidence of scholars and of the general public.

As a comprehensive popular dictionary we believe that Webster's International Dictionary is worthy to retain that pre-eminence a Quarterly Reviewer assigned to its predecessor seventeen years ago We believe that it embodies the ripest results of modern philology, in the degree and form appropriate to a work of its class. It is neither a library nor an encyclopedia, but it is a dictionary designed to meet the everyday needs of all who write or speak the English tongue It retains that excellence in definitions which has made Webster the safe and familiar authority to which judge, journalist, scholar, artisan, and man of business refer In etymology, pronunciation, citations, pictorial illustrations, it carries to greater perfection the merits of its predecessor. It adequately represents the vast and various advances in all departments of thought and knowledge in recent years. We believe it is worthy to serve as the convenient, trustworthy, sufficient, popular interpreter of the English language in its present development, and of the incomparable literature of which that language is the medium.

PREFACE TO THE ENGLISH EDITION.

THE first or original edition of Webster's large or Unabridged Dictionary was published in two volumes quarto in the year 1828, and was sold largely by subscription.

The second edition, 1840, somewhat enlarged and revised by the author, was published in two volumes royal octavo; to which a supplement was added in 1843.

After the death of Dr. Webster in 1843, the unsold remainder of this edition and the copyright of the work were purchased by the predecessors of the present proprietors, who immediately took measures to prepare and issue a new and revised edition in a single volume in small quarto. This edition was edited by Professor Chauncey A. Goodrich, the son-in-law of Dr. Webster, who had previously superintended the preparation of an abridged edition of the original quarto. Dr. Goodrich had an able corps of assistants, and the new edition of 1847 was received with general favour.

In 1859 an edition was published which included important supplementary matter and a large number of pictorial illustrations. The general popularity and acknowledged excellence of this edition suggested the opportunity and enforced the duty of a thorough revision of the entire work. Arrangements were made for such a revision, and the work was begun by Professor Goodrich and a body of assistants. These arrangements were so seriously disturbed by his death as to require important readjustments, as the result of which the writer reluctantly consented to act as editor-in-chief, and Mr. William A. Wheeler became the assistant and acting editor, having previously given abundant evidence of his pre-eminent qualifications for this office. The etymologies were all revised and recast in the light of modern philology by Dr. C. A. F. Mahn, of Berlin. The definitions were rewrought and rearranged and greatly condensed and improved by the combined efforts of Professors William D. Whitney and Daniel C. Gilman. Many fresh examples of the meanings and uses of words were introduced from older and more recent writers. Scientific terms were more generally recognized and carefully defined, and their meanings were often illustrated for the eye as well as for the mind. By this means the new dictionary from being the driest became the most attractive volume in multitudes of households. Valuable tables were furnished in the appendix, conspicuous among which was the Explanatory Vocabulary of the Names of Noted Fictitious Persons and Places, which was prepared by Mr. Wheeler.

The general excellence of this edition of 1864 was cordially and universally recognized, and both contributors and publishers owe a debt of gratitude to the many friends who have since been so just and so generous in their criticisms and praises. Their activity and care did not terminate with the origination and publication of the bulky volume for which they had become responsible. They have always held themselves ready to listen to suggestions, and to correct mistakes, whether errors of matter or errors of the press. They have been prompt to accumulate and preserve every description of material which might be available for future use. From material thus gathered they were able to publish a valuable supplement in the year 1879, which was edited by Professor Franklin B. Dexter.

In the same year a more formal beginning was made in the preparation of the edition which is now completed and will be known as the Revision of 1890. It would seem on the one hand that the revision and emendation of a work so satisfactory as the edition of 1864 would be the least expensive of time and attention. And yet it has been proved on the other hand by our experience that no work may be made so expensive of both time and energy as that involved in careful verification, condensation, and adjustment. It is believed that no dictionary of the English language yet completed has cost more painstaking in these particulars than the present edition. Much of the care thus expended may leave little trace on the printed page, indeed, no trace of any kind, except of satisfaction in the mind of the critical and conscientious editor. The condensation which becomes imperative from the increase of human knowledge may often seem to shrivel and contract the product in which the reader looks for amplitude of statement, proof, and illustration; and yet even an Unabridged Dictionary has its limits. The task of adjustment is often the most difficult of all, although it may show the least of the careful attention which it has cost. All these and other difficulties can only be overcome by the employment for many years of a large number of trained assistants in the office who have devoted themselves to literary research and verbal criticism, and of a corps of specialists who have made original contributions in Science and the Arts. The prominence given to the definitions and illustrations of scientific, technological, and zoological terms will attract the attention of every reader and perhaps elicit the displeasure of many critics. While we sympathize with their regret that so much space is given to explanations and illustrations that are purely technical rather than literary, we find ourselves compelled to yield to the necessity which in these days requires that the dictionary which is ever at hand should carefully define the terms that record the discoveries of Science, the triumphs of Invention, and the revelations of Life. We have spared no pains to make this part of our book as perfect as possible in both text and illustration.

In the important department of Etymology, the excellent work of the last edition has been supervised and readjusted to the demands of modern Philology and recast by Professor Edward S. Sheldon, of Harvard University. As a matter of curious and, to a few readers, of instructive interest, the eminent Professor August Fick, of the University of Göttingen, has prepared a select table of radicals of important English words, with the various forms which they have taken in their historical development.

The important department of Pronunciation has been committed to the special direction of the Reverend Samuel W. Barnum, and Professor Samuel Porter of the National Deaf-Mute College, Washington, D.C. Mr. Barnum has made the study of English pronunciation almost a life-work, having been trained under Professor Goodrich in the special and

exact knowledge of the subject in its details, and having made himself familiar with the teachings of the leading writers in English Orthoëpy. Professor Porter contributes, in the Guide to Pronunciation, the result of a careful and long-continued study of Phonology in the physiological method pursued by Mr. Alexander Melville Bell, whose system in its more prominent features is accepted as scientifically true and practically useful. The history of the various methods of pronunciation has been subject to a most careful revision and rendered, if possible, more trustworthy than ever before. The Synopsis (§ 277) of words differently pronounced by different Orthoëpists, and the marking of the pronunciation of the words in the vocabulary by respelling, are the work of Mr. Barnum.

The definitions in Anatomy have been revised by Professor Sidney I. Smith, of Yale University ;

In Architecture and the Fine Arts, by Professor Russell Sturgis, of the College of New York ;

In Biology and Physiology, by Professor Russell H. Chittenden, of Yale University ;

In Botany, by Professor Daniel C. Eaton, of Yale University ;

In Chaucer (Canterbury Tales), by Professor Thomas R. Lounsbury, of Yale University ;

In Chemistry, by Professor Arthur W. Wright, of Yale University, assisted by Professor Charles S. Palmer, University of Colorado ;

In Law, by Francis Wharton (deceased), of the Department of State at Washington ;

In Mathematics and Astronomy, by Professor Hubert A. Newton, of Yale University ;

In Mechanics and Engineering, by Professor Charles B. Richards, of Yale University, and Professor William P. Trowbridge, of Columbia College ;

In Medicine, by Alexander Duane, M.D., New York ;

In Mineralogy and Geology, by Professor Edward S. Dana, of Yale University ;

In Music, by Mr. John S. Dwight, of Boston ;

In Nautical Terms, by Mr. Charles L. Norton, of New York ;

In Paleontology and Geology, by Professor Oscar L. Harger (deceased), of Yale University ;

In Zoology, by Professor Addison E. Verrill, of Yale University ;

The Dictionary of Noted Names of Fiction has been carefully elaborated by Professor Henry A. Beers, of Yale University, who has also contributed many new topics and corrected some oversights, and in many ways increased its attractiveness.

The Brief History of the English Language, originally prepared by Professor James Hadley, has been carefully revised and brought down to the present time by Mr. George Lyman Kittredge, of Harvard University.

The Pictorial Illustrations have received careful attention, not only in respect to artistic excellence, but in respect to scientific exactness.

The Revision now given to the public is the fruit of over ten years of work by a large editorial staff, in which publishers and editors have spared neither expense nor pains to produce a comprehensive, accurate, and symmetrical work

As a matter of historical interest, the prefaces of the principal earlier editions are appended in their chronological order.

MEMOIR OF NOAH WEBSTER.

BY CHAUNCEY A. GOODRICH, D. D.

It is natural for those who make frequent use of a work like this, to desire some knowledge of the author's life, and especially of that long course of intellectual labor by which he contributed so largely to the literary treasures of our language. To gratify this desire is the object of the present Memoir. A brief outline will be given of the leading occurrences of his life, with particular reference to the occasions which called forth the principal productions of his pen. The materials of this sketch were obtained from Dr. Webster himself, about ten years before his death, and were first used in the preparation of a memoir inserted in the "National Portrait Gallery of Distinguished Americans," in the year 1833. That memoir has been rewritten, with large additions, and is now brought down to the period of the author's death.

Noah Webster was born in Hartford, Connecticut, about three miles from the center of the city, on the 16th of October, 1758. His father was a respectable farmer and justice of the peace, and was a descendant, in the fourth generation, of John Webster, one of the first settlers of Hartford, who was a magistrate, or member of the colonial council, from its first formation, and, at a subsequent period, governor of Connecticut His mother was a descendant of William Bradford, the second governor of the Plymouth colony. The family was remarkable for longevity. His father died at the advanced age of nearly ninety-two. He and one of his brothers lived considerably beyond the age of eighty. His remaining brother died in his eightieth year, and of his two sisters, one was advanced beyond seventy, and the other had nearly reached the same age, at the period of their death.

Mr. Webster commenced the study of the classics, in the year 1772, under the instruction of the clergyman of the parish, the Rev. Nathan Perkins, D. D., and in 1774 was admitted a member of Yale College. The war of the Revolution, commencing the next year, interrupted the regular attendance of the students on their usual exercises, and deprived them of no small part of the advantages of a collegiate course of instruction. In his Junior year, when the western part of New England was thrown into confusion by General Burgoyne's expedition from Canada, Mr. Webster volunteered his services under the command of his father, who was captain in the *alarm list*, a body comprising those of the militia who were above forty-five years of age, and who were called into the field only on pressing emergencies. In that campaign, all the males of the family, four in number, were in the army at the same time. Notwithstanding the interruption of his studies by these causes, Mr. Webster graduated with reputation in 1778

The class to which he belonged produced an unusual number of men who were afterward distinguished in public life. Among these may be mentioned Joel Barlow, author of the Columbiad, and minister of the United States to the court of France; Oliver Wolcott, secretary of the treasury of the United States under the administration of Washington, and subsequently governor of the State of Connecticut; Uriah Tracy, a distinguished member of the Senate of the United States; Stephen Jacob, chief justice, and Noah Smith, associate judge, of the Supreme Court of Vermont; Zephaniah Swift, chief justice, and Ashur Miller, associate judge, of the Supreme Court of Connecticut; besides a number of others, who were either members of Congress or among the leaders of our great political parties at the commencement of the present century.

The period at which Mr. Webster entered upon life was an unpropitious one for a young man to be cast upon the world without property. The country was impoverished by the war to a degree of which it is difficult, at the present day, to form any just conception; there was no prospect of peace; the issue of the contest was felt, by the most sanguine, to be extremely doubtful, and the practice of the law, which Mr. Webster intended to pursue, was in a great measure set aside by the general calamity. It was under these circumstances that, on his return from the Commencement when he graduated, his father gave him an eight-dollar bill of the Continental currency (then worth about four dollars in silver), and told him that he must thenceforth rely on his own exertions for support. As a means of immediate subsistence, he resorted to the instruction of a school, and, during the summer of 1779, resided at Hartford, Connecticut, in the family of Mr., afterward Chief Justice, Ellsworth. An intimate friendship was thus formed between these two gentlemen, which was interrupted only by the death of the chief justice.

Not having the means of obtaining a regular education for the bar, Mr. Webster, at the suggestion of a distinguished counselor of his acquaintance, determined to pursue the study of the law in the intervals of his regular employment, without the aid of an instructor; and, having presented himself for examination, at the expiration of two years, was admitted to practice in the year 1781. As he had no encouragement to open an office, in the existing state of the country, he resumed the business of instruction, and taught a classical school, in 1782, at Goshen, in Orange county, New York. Here, in a desponding state of mind, created by the unsettled condition of things at the close of the war, and the gloomy prospects for business, he undertook an employment which gave a complexion to his whole future life. This was the compilation of books for the instruction of youth in schools. Having prepared the first draught of an elementary treatise of this kind, he made a journey to Philadelphia in the autumn of the same year, and, after exhibiting a specimen of the work to several members of Congress, among whom was Mr. Madison, and to the Rev. S. S Smith, D. D., at that time a professor, and afterward president, of the college at Princeton, he was encouraged by their approbation to prosecute his design Accordingly, in the winter following, he revised what he had written, and, leaving Goshen in 1783, he returned to Hartford, where he published his "*First Part of a Grammatical Institute of the English Language.*" The second and third parts were published in the years immediately following. These works, comprising a Spelling Book, an English Grammar, and a compilation for reading, were the first books of the kind published in the United States. They were gradually introduced into most of the schools of our country; and to so great an extent has the Spelling Book been used, that, during the twenty years in which he was employed in compiling his American Dictionary, the entire support of his family was derived from the profits of this work, at a premium for copyright of less than a cent a copy. About twenty-four millions of this book have been published, down to the present year [1847] in the different forms which it assumed under the revision of the author; and its popularity has gone on continually increasing The demand for some years past has averaged about one million copies a year To its influence, probably, more than to any other cause, are we indebted for that remarkable uniformity of pronunciation in our country, which is so often spoken of with surprise by English travelers.

In entering thus early on his literary career, Mr. Webster did not confine himself to the publication of his own works. At a period when nothing had as yet been done to perpetuate the memorials of our early history, he led the way, in this important branch of literary effort, by the publication of that highly valuable and characteristic work, Governor Winthrop's Journal. Having learnt that a manuscript copy was in possession of Governor Trumbull, of Connecticut, he caused it to be transcribed at his own expense, by the governor's private secretary, and risked more than the amount of his whole property in its publication. The sale never remunerated him for the expenses thus incurred.

At the period of Mr. Webster's return to Hartford, in 1783, the State was agitated by violent dissensions on the subject of a grant, made by Congress to the army, of half pay for life, which was afterward commuted for a grant of full pay for five years beyond their term of service. To this grant it was strongly objected, that, if the army had suffered by the reduced value of the bills in which they were paid, the country at large had sustained an equal loss by the depreciation of the currency, and by other causes. So strong was the excitement on this subject, that public meetings were held throughout the State, to prevent the laws of Congress from being carried into effect; and at length a convention met at Middletown with the same design, at which two thirds of the towns in Connecticut were represented. In this state of things, Mr. Webster, though only twenty-five years of age, came forward to vindicate the measures of Congress, and wrote a series of papers on the subject, under the signature of Honorius, which were published in the "Connecticut Courant," and read extensively throughout the State. The effect was great. At the next election, in April, 1784, a large majority of the legislature were supporters of Congress in their measures So highly were Mr. Webster's services appreciated on this occasion, that he received the thanks of Governor Trumbull in person, and was publicly declared by

a member of the council, to have "done more to allay popular discontent, and support the authority of Congress at this crisis, than any other man."

These occurrences in his native State, together with the distress and stagnation of business in the whole country, resulting from the want of power in Congress to carry its measures into effect, and to secure to the people the benefits of a stable government, convinced Mr. Webster that the old Confederation, after the dangers of the war were past, was utterly inadequate to the necessities of the people. He therefore published a pamphlet, in the winter of 1784-85, entitled "*Sketches of American Policy*," in which, after treating of the general principles of government, he endeavored to prove that it was absolutely necessary, for the welfare and safety of the United States, to establish a new system of government, *which should act not on the States, but directly on individuals, and vest in Congress full power to carry its laws into effect.* Being on a journey to the Southern States, in May, 1785, he went to Mount Vernon, and presented a copy of this pamphlet to General Washington. It contained, the writer believes, the first distinct proposal, made through the medium of the press, for a new Constitution of the United States.

One object of Mr. Webster's journey to the South was, to petition the State legislatures for the enactment of a law securing to authors an exclusive right to the publication of their writings. In this he succeeded to a considerable extent; and the public attention was thus called to a provision for the support of American literature, which was rendered more effectual by a general copyright law, enacted by Congress soon after the formation of our government. At a much later period (in the years 1830-31), Mr. Webster passed a winter at Washington, with the single view of endeavoring to procure an alteration of the existing law, which should *extend* the term of copyright, and thus give a more ample reward to the labors of our artists and literary men. In this design he succeeded; and an act was passed more liberal in its provisions than the former law, though less so than the laws of some European governments on this subject.

On his return from the South, Mr. Webster spent the summer of 1785 at Baltimore, and employed his time in preparing a course of lectures on the English language, which were delivered, during the year 1786, in the principal Atlantic cities, and were published in 1789, in an octavo volume, with the title of "*Dissertations on the English Language.*"

The year 1787 was spent by Mr. Webster at Philadelphia, as superintendent of an Episcopal academy. The convention which framed the present Constitution of the United States were in session at Philadelphia during a part of this year; and when their labors were closed, Mr. Webster was solicited by Mr. Fitzsimmons, one of the members, to give the aid of his pen in recommending the new system of government to the people. He accordingly wrote a pamphlet on this subject, entitled an "*Examination of the Leading Principles of the Federal Constitution.*"

In 1788, Mr. Webster attempted to establish a periodical in New York, and for one year published the "*American Magazine*," which, however, failed of success; as did also an attempt to combine the efforts of other gentlemen in a similar undertaking. The country was not yet prepared for such a work.

In 1789, when the prospects of business became more encouraging, after the adoption of the new Constitution, Mr. Webster settled himself at Hartford in the practice of the law. Here he formed or renewed an acquaintance with a number of young men just entering upon life, who were ardently devoted, like himself, to literary pursuits. Among these may be mentioned his two classmates, Barlow and Wolcott; Trumbull, author of McFingal; Richard Alsop; Dr Lemuel Hopkins; and, though somewhat older, the Rev. Nathan Strong, pastor of the First Congregational Church, who, in common with the three last mentioned, was highly distinguished for the penetration of his intellect and the keenness of his wit. The incessant contact of such minds at the forming period of their progress had great influence on the literary habits of them all in after life. It gave them a solid and manly cast of thought, a simplicity of taste, a directness of statement, a freedom from all affectation and exuberance of imagery or diction, which are often best acquired by the salutary use of ridicule, in the action and reaction on each other of keen and penetrating minds. It had, likewise, a powerful influence on the social circles in which they moved; and the biographer of Governor Wolcott has justly remarked, that at this time "few cities in the Union could boast of a more cultivated or intelligent society than Hartford, whether men or women."

In the autumn of the same year, encouraged by the prospect of increasing business, Mr. Webster married the daughter of William Greenleaf, Esq., of Boston, a lady of a highly cultivated intellect, and of great elegance and grace of manners. His friend Trumbull speaks of this event in one of his letters to Wolcott, who was then at New York, in his characteristic vein of humor. "Webster has returned, and brought with him a very pretty wife. I wish him success; but I doubt, in the present decay of business in our profession, whether his profits will enable him to keep up the style he sets out with. I fear he will breakfast upon Institutes, dine upon Dissertations, and go to bed supperless." The result, however, was more favorable than it appeared in the sportive anticipations of Trumbull. Mr. Webster found his business profitable, and continually increasing, during his residence of some years in the practice of the law at Hartford.

This employment he was induced to relinquish, in 1793, by an interesting crisis in public affairs. General Washington's celebrated *proclamation of neutrality*, rendered necessary by the efforts of the French minister, Genet, to raise troops in our country for the invasion of Louisiana, and to fit out privateers against nations at peace with the United States, had called forth the most bitter reproaches of the partisans of France; and it was even doubtful, for a time, whether the unbounded popularity of the FATHER OF HIS COUNTRY could repress the public effervescence in favor of embarking in the wars of the French revolution. In this state of things, Mr. Webster was strongly solicited to give the support of his pen to the measures of the administration, by establishing a daily paper in the city of New York. Though conscious of the sacrifice of personal ease which he was called upon to make, he was so strongly impressed with the dangers of the crisis, and so entirely devoted to the principles of Washington, that he did not hesitate to accede to the proposal. Removing his family to New York, in November, 1793, he commenced a daily paper, under the title of the "*Minerva*," and afterward a semi-weekly paper, with that of the "*Herald*"—names which were subsequently changed to those of the "*Commercial Advertiser*," and "*New York Spectator.*" This was the first example of a paper for the country, composed of the columns of a daily paper, without recomposition—a practice which has now become very common. In addition to his labors as sole editor of these papers, Mr. Webster published, in the year 1794, a pamphlet which had a very extensive circulation, entitled "*The Revolution in France.*"

The publication of the treaty negotiated with Great Britain by Mr. Jay, in 1795, aroused an opposition to its ratification of so violent a nature as to stagger for a time the firmness of Washington, and to threaten civil commotions. Mr. Webster, in common with General Hamilton and some of the ablest men of the country, came out in vindication of the treaty. Under the signature of CURTIUS, he published a series of papers, which were very extensively reprinted throughout the country, and afterward collected by a bookseller of Philadelphia in a pamphlet form. Of these, ten were contributed by himself, and two by Mr., afterward Chancellor, Kent. As an evidence of their effect, it may not be improper to state, that Mr. Rufus King expressed his opinion to Mr. Jay, that the essays of CURTIUS had contributed more than any other papers of the same kind to allay the discontent and opposition to the treaty; assigning as a reason, that they were peculiarly well adapted to the understanding of the people at large.

When Mr. Webster resided in New York, the yellow fever prevailed at different times in most of our large Atlantic cities; and a controversy arose, among the physicians of Philadelphia and New York, on the question whether it was introduced by infection, or generated on the spot. The subject interested Mr. Webster deeply, and led him into a laborious investigation of the history of pestilential diseases at every period of the world. The facts which he collected, with the inferences to which he was led, were embodied in a work of two volumes, octavo, which, in 1799, was published both in this country and in England. This work has always been considered as a valuable repository of facts; and during the prevalence of the Asiatic cholera in the year 1832, the theories of the author seemed to receive so much confirmation, as to excite a more than ordinary interest in the work, both in Europe and America.

During the wars which were excited by the French revolution, the power assumed by the belligerents to blockade their enemies' ports by proclamation, and the multiplied seizures of American vessels bound to such ports, produced various discussions respecting the rights of neutral nations in time of war. These discussions induced Mr. Webster to examine the subject historically; and, in 1802, he published a treatise full of minute information and able reasoning on the subject. A gentleman of competent abilities, who said he had read all that he could find on that subject in the English, French, German, and Italian languages, declared that he considered this treatise as the best he had seen. The same year, he also published "*Historical Notices of the Origin and State of Banking Institutions and Insurance Offices*," which was republished in Philadelphia by one Humphrey, without giving credit to the author; and a part of which, taken from this reprint, was incorporated into the Philadelphia edition of Rees's Cyclopedia.

At this time, Mr. Webster resided at New Haven, to which place he had removed in the spring of 1798. For a short period after his departure from New York, he wrote for the papers mentioned above, which, although placed under the care of another editor, continued for a time to be his property. He very soon succeeded, however, in disposing of his interest in them, and from that time devoted himself entirely to literary pursuits.

In the year 1807, Mr. Webster published "*A Philosophical and Practical Grammar of the English Language.*" This was a highly original work, the result of many years of diligent investigation. The author's views may be gathered from the motto on the title-page, taken from Lord Bacon's Aphorisms—"Antisthenes, being asked what learning was most necessary, replied, 'To unlearn that which is *naught*.'" He considered our English Grammars as objectionable in one important respect, namely, that of being too much conformed to those of the Latin and Greek languages in their nomenclature and classification. True philosophy, he maintained, requires us to arrange things, and give them

names, according to their real nature. But our language is rude and irregular in comparison with those of the ancients. It can not be reduced to the same orderly system. The several parts of it can not be brought under the same names and classifications. We need, therefore, a nomenclature of our own in some important particulars. Thus the word *pronoun* properly denotes a *substitute* for a *noun*. But, in many cases, words of this class are substitutes for clauses, or parts of sentences, and not for single nouns. There are also other words, not ordinarily ranged among pronouns, which act equally as substitutes, that is, perform the office of pronouns. Mr. Webster, therefore, proposed to lay aside the word *pronoun*, and apply the term *substitute* to this whole class, as describing their true office. Other changes were proposed, of the same nature, and for the same reasons. No one, who examines the subject with attention, can doubt the advantages of Mr. Webster's nomenclature, in itself considered. It enabled him to give an analysis of sentences, and to explain constructions, in a manner incomparably superior to that of the ordinary systems. His intimate acquaintance with the sources of our language prepared him to account, in the most satisfactory manner, for many puzzling forms of expression. Still, the prejudice against a change of nomenclature is so great, that this work has been far less known than it ought to be. It contains much valuable matter found in no other work, and is believed to be the most truly philosophical Grammar which we have of the English language.

After publishing his Grammar, Mr. Webster entered, in the same year (1807), on the great work of his life, which he had contemplated for a long period — that of preparing a new and complete Dictionary of the English language. As preliminary to this, he had published, in 1806, a dictionary in the octavo form, containing a large number of words not to be found in any similar work, with the definitions corrected throughout, though necessarily expressed in very brief terms. From this time, his reading was turned more or less directly to this object. A number of years were spent in collecting words which had not been introduced into the English dictionaries, in discriminating with exactness the various senses of all the words in our language, and adding those significations which they had recently received. Some estimate may be formed of the labor bestowed on this part of the work, from the fact that "*The American Dictionary of the English Language*" contained, in the first edition, twelve thousand words, and between thirty and forty thousand definitions, which are not to be found in any preceding work. The number has been swelled, by subsequent additions, to about thirty thousand new words. Seventy years had elapsed since the first publication of Johnson's Dictionary; and scarcely a single improvement had been attempted in the various editions through which it had passed, or the numerous compilations to which it had given rise, except by the addition of a few words to the vocabulary. Yet in this period the English mind was putting itself forth in every direction, with an accuracy of research and a fertility of invention which are without a parallel in any other stage of its history. A complete revolution had taken place in almost every branch of physical science; new departments had been created, new principles developed, new modes of classification and description adopted. The political changes which so signally marked that period, the excitement of feeling and conflict of opinion resulting from the American and French revolutions, and the numerous modifications which followed in the institutions of society, had also left a deep impress on the language of politics, law, and general literature. Under these circumstances, to make a defining dictionary adapted to the present state of our language, was to produce an entirely *new work;* and how well Mr. Webster executed the task, will appear from the decision of men best qualified to judge, both in this country and in Europe, who have declared that his improvements upon Johnson are even greater than Johnson himself made on those who preceded him. Still more labor, however, was bestowed on another part of the work; viz., the etymology of our leading terms. In this subject, Mr. Webster had always felt a lively interest, as presenting one of the most curious exhibitions of the progress of the human mind. But it was not till he had advanced considerably in the work as originally commenced that he found how indispensable a knowledge of the true derivation of words is to an exact development of their various meanings. At this point, therefore, he suspended his labors on the defining part of the Dictionary, and devoted a number of years to an inquiry into the origin of our language, and its connection with those of other countries. In the course of these researches, he examined the vocabularies of twenty of the principal languages of the world, and made a synopsis of the most important words in each; arranging them under the same radical letters, with a translation of their significations, and references from one to another, when the senses are the same or similar. He was thus enabled to discover the real or probable affinities between the different languages, and, in many instances, to discover the primary, physical idea of an original word, from which the secondary senses have branched forth. Being thus furnished with a clew to guide him among the numerous, and often apparently inconsistent, significations of our most important words, he resumed his labors on the defining part of the Dictionary, and was able to give order and consistency to much that had before appeared confused and contradictory. The results of his inquiries into the origin and filiation of languages were embodied in a work, about half the size of the American Dictionary, entitled "*A Synopsis of Words in Twenty Languages.*" This, owing to the expense of the undertaking, has not yet been published; though its principal results, so far as our language is concerned, are briefly given in tracing the etymology of our leading terms.

During the progress of these labors, Mr. Webster, finding his resources inadequate to the support of his family at New Haven, removed, in 1812, to Amherst, a pleasant country town within eight miles of Northampton, Massachusetts. Here he entered, with his characteristic ardor, into the literary and social interests of the people among whom he was placed. His extensive library, which was open to all, and his elevated tone of thought and conversation, had naturally a powerful influence on the habits and feelings of a small and secluded population. It was owing, in part, probably, to his removal to this town, that an academy was there established, which is now among the most flourishing seminaries of our land. A question having soon after arisen respecting the removal of Williams College from a remote part of the State to some more central position, Mr. Webster entered warmly into the design of procuring its establishment at Amherst, as one of the most beautiful and appropriate locations in New England. Though the removal did not take place, so strong an interest on the subject was awakened in Amherst and the neighboring towns, that a new college was soon after founded there, in the establishment of which Mr. Webster, as president of its first board of trustees, had great influence, both by his direct exertions to secure it patronage, and by the impulse which he had given to the cause of education in that part of the State.

In 1822, Mr. Webster returned with his family to New Haven, and, in 1823, received the degree of LL. D. from Yale College. Having nearly completed his Dictionary, he resolved on a voyage to Europe, with a view to perfect the work by consulting literary men abroad, and by examining some standard authors, to which he could not gain access in this country. He accordingly sailed for France in June, 1824, and spent two months at Paris in consulting several rare works in the *Bibliothèque du Roi*, and then went to England, where he remained till May, 1825. He spent about eight months at the University of Cambridge, where he had free access to the public libraries; and there he finished "THE AMERICAN DICTIONARY." He afterward visited London, Oxford, and some of the other principal cities of England, and in June returned to this country. This visit to England gave him an opportunity to become acquainted with literary men and literary institutions in that country, and to learn the real state of the English language there.

Soon after Dr. Webster returned to this country, the necessary arrangements were made for the publication of the work. An edition of twenty-five hundred copies was printed in this country, at the close of 1828, which was followed by an edition of three thousand in England, under the superintendence of E. H. Barker, Esq., editor of the "Thesaurus Græcæ Linguæ" of Henry Stephens. With the publication of the American Dictionary, at the age of seventy, Dr. Webster considered the labors of his literary life as brought, in a great measure, to a close. He revised a few of his earlier works for publication, and particularly his "*History of the United States*," a book designed for the higher classes of schools, for youth who are acquiring a taste for history, and for men of business who have not time to peruse larger treatises.

In 1840-41, Dr. Webster published a second edition of the American Dictionary, consisting of three thousand copies, in two volumes, royal octavo. The improvements consisted chiefly in the addition of a number of thousand words to the vocabulary, the correction of definitions in several of the sciences, in conformity with later discoveries and classifications, and the introduction and explanation of many phrases from foreign languages, and of foreign terms used in books of music.

In 1843, he published "*A Collection of Papers on Political, Literary, and Moral Subjects*," in one volume, octavo. This was composed chiefly of tracts and disquisitions, which had been published at an earlier period of his life, either in the form of pamphlets, or of papers read before literary and philosophical societies, and printed among their Transactions. It contains his "*Observations on the French Revolution*," his "*Essay on the Rights of Neutral Nations*," and the papers signed CURTIUS, in vindication of Mr. Jay's treaty with Great Britain. To these is added an elaborate dissertation "*On the supposed Change in the Temperature of Winter*," which was read before the Connecticut Academy of Arts and Sciences, in the year 1799. In this he controverts the opinion which has generally prevailed, that the temperature of the winter season, in northern latitudes, has suffered a material change, and become warmer in modern than it was in ancient times. The subject was one which required very great minuteness and extent of historical research, and this paper contains the result of a series of investigations, which had been carried on, in conjunction with the author's other pursuits, for a period of more than ten years. Many of the facts which it presents are of a very curious and striking nature. There is, probably, no other treatise which exhibits the historical evidence on this subject with so much fullness and accuracy. In addition to this, the volume contains a number of other papers of an interesting character, and the whole collection forms a truly valuable record of the author's earlier labors.

In thus tracing the principal events of Dr. Webster's life, we have reached the commencement of the year in which he died; and it may here be proper to pause for a moment, and consider some of those qualities and habits of mind which prepared him for this long course of public

service and literary labor. The leading traits in the character of Dr. Webster were enterprise, self-reliance, and indomitable perseverance. He was naturally of a sanguine temperament; and the circumstances under which he entered on the active duties of life were eminently suited to strengthen the original tendencies of his nature. Our country was just struggling into national existence. The public mind was full of ardor, energy, and expectation. His early associates were men of powerful intellect, who were engaged, to a great extent, in laying the foundations of our government, and who have stamped the impress of their genius on the institutions of their country. As the advocate of the Federal Constitution, and a strenuous supporter of Washington's administration, he was brought into habits of the closest intimacy with Alexander Hamilton, John Jay, Oliver Wolcott, Timothy Pickering, and the other great men on whom Washington relied for counsel and aid in organizing the new government. The journal which he established at New York was their organ of communication with the public, in the great commercial emporium of the United States. He was thus placed on terms of constant and confidential intercourse with the leading members of the cabinet, and the prominent supporters of Washington throughout the country. While he had their respect as a ready and energetic writer, he enjoyed their counsel, imparted with the utmost freedom, as to the manner in which he might best conduct the defense of their common principles. The natural result, especially on a mind constituted like his, was the formation of all his habits of thought and action into a resemblance to theirs. Energy, self-reliance, fearlessness, the resolute defense of whatever he thought right and useful, the strong hope of ultimate success, — these became the great elements of his intellectual character. He carried them with him, at a subsequent period, into all his literary pursuits, and they sustained him under the pressure of difficulties which would have crushed the spirit of almost any other man.

One of the habits which Dr. Webster formed in this early course of training, was that of arranging all his acquired knowledge in the most exact order, and keeping the elements of progressive thought continually within his reach. Although his memory was uncommonly quick and tenacious, he saw, as the editor of a daily journal, how idle and unsafe it is to rely on mere recollection for the immense mass of materials which a public writer must have ever at command. He learnt, therefore, to preserve *documents* of all kinds with the utmost care. All that he had ever written, all that had been written against him, everything that he met with in newspapers or periodicals which seemed likely to be of use at any future period, was carefully laid aside in its appropriate place, and was ready at a moment's warning. He had also a particular mark by which he denoted, in every work he read, all the new words, or new senses of words, which came under his observation. He filled the margin of his books with notes and comments containing corrections of errors, a comparison of dates, or references to corresponding passages in other works, until his whole library became a kind of *Index Rerum*, to which he could refer at once for everything he had read.

Another habit, which resulted in part from his early pursuits, was that of carrying on numerous and diversified employments at the same time. To men of the present generation, Dr. Webster is known chiefly as a learned philologist; and the natural inference would be, that he spent his whole life among his books, and chiefly in devotion to a single class of studies. The fact, however, was far otherwise. Though he was always a close student, — reading, thinking, and writing at every period of his life, — he never withdrew himself from the active employments of society. After his first removal to New Haven, he was for a number of years one of the aldermen of the city, and judge of one of the State courts. He also frequently represented that town in the legislature of the State. During his residence at Amherst, he was called, in repeated instances, to discharge similar duties, and spent a part of several winters at Boston as a member of the General Court. He entered with zeal into all the interests of the town and county where he lived, its schools and academies, its agriculture and mechanic arts, its advance in taste and refinement. He gave freely of his time, his counsel, and the efforts of his pen, when requested, in public addresses, or through the medium of the press, for the promotion of every kind of social improvement. Equally large and diversified was the range of his intellectual pursuits. There was hardly any department of literature which he had not explored with lively interest, at some period of his life. He wrote on a greater variety of topics than perhaps any other author of the United States; — on the foundations of government, the laws of nations, the rights of neutrals, the science of banking, the history of his country, the progress of diseases, and the variations of climate; on agriculture, commerce, education, morals, religion, and the great means of national advancement, in addition to the principal theme of his life, philology and grammar. Such was the activity of his mind, and the delight he found in new acquisitions, that a *change* of employment was all the relief he needed from the weariness of protracted study. The refreshment which others seek in journeys, or the entire suspension of intellectual effort, he found, during most of his life, in the stimulus afforded by some new and exciting object of pursuit. Mental exertion was the native element of his soul; and it is not too much to say, that another instance of such long-continued literary toil, such steady, unfaltering industry, can hardly be found in the annals of our country.

The last of those mental habits which will now be traced was that of original investigation, of thorough and penetrating research. The period at which Dr. Webster came forward in public life was one, to an uncommon extent, in which every important subject was discussed in its *principles*. It was a period when the foundations of our civil polity were laid, and when such men as Hamilton, Madison, and Jay became "the expounders of the Constitution," and the advocates of the new government. All things conspired to make the discussions of that day masterly exhibitions of reasoning and profound investigation, — the character of the men engaged, the conflict of great principles, and the weighty interests suspended on the issue. Dr. Webster for some years took a large share in these discussions, both in pamphlets and through the journal which he conducted. The habits which he thus formed went with him into all the literary pursuits of his subsequent life. They made him a bold, original thinker, — thorough in all his investigations, and fearless in proclaiming the results. He had no deference for authority, except as sustained by argument. He was no copyist, no mere compiler. Everything he wrote, from a chapter in "*The Prompter*," to his "*Introduction to the American Dictionary*," bore the same impress of original thought, personal observation, and independent inquiry.

It is unnecessary to say how perfectly these habits were adapted to prepare Dr. Webster for the leading employment of his life, the production of the American Dictionary. Nothing but his eager pursuit of every kind of knowledge, and his exact system in bringing all that he had ever read completely under his command, could have enabled him to give in his first edition more than twelve thousand words and forty thousand definitions, which could then be found in no other similar work. Nothing but his passion for original investigation prevented him from building, like Todd, on the foundation of Johnson, or arranging Horne Tooke's etymologies, like Richardson, with some additions and improvements, under their proper heads in a dictionary. But, commencing with the Diversions of Purley as the starting point of his researches, he was led by the character of his mind to widen continually the field of his inquiries. He passed from the Western languages to the Eastern, in tracing the affinities of his native tongue. He established some of those great principles which have made etymology a science, and led the way in that brilliant career of investigation by which the German philologists are throwing so clear a light on the origin and filiation of the principal languages of the globe. But into these studies he would never have entered, nor even thought of attempting such a work as an original dictionary of the English language, except under the impulse of those other traits, — that sanguine temperament, that spirit of self-reliance, that fearless determination to carry out everything that he thought useful and true, to its utmost limits, — which were spoken of above, as forming the master principle of his character. It is difficult to conceive, at the present day, how rash and hopeless such an undertaking then appeared on the part of any citizen of the United States. It was much as though we should now hear of a similar design by one of the settlers of New Holland. He was assailed with a storm of ridicule at home and abroad; and even his best friends, while they admired his constancy, and were fully convinced of his erudition, had strong fears that he was engaged in a fruitless effort, — that he would never have justice done him, in bringing his work before the world under such adverse circumstances. Nothing, plainly, but uncommon ardor, boldness, and self-confidence, could have sustained him under the pressure of these difficulties. But such qualities, it must be confessed, notwithstanding all the support they afford, are not without their disadvantages. They often lead to the adoption of hasty opinions, especially in new and intricate inquiries. Of this Dr. Webster was aware. He saw reason to change his views on many points, as he widened the sphere of his knowledge. In such cases, he retracted his former statements with the utmost frankness; for he had not a particle of that pride of opinion which makes men so often ashamed to confess an error, even when they have seen and abandoned it. This ardor of mind is apt, also, to lead men into a strength and confidence of statement which may wear at times the aspect of dogmatism. If Dr. Webster should be thought by any one to have erred in this respect, the error, it should be remembered, was one of temperament — the almost necessary result of that bold, self-relying spirit, without which no man could have undertaken, much less have carried through, the Herculean task of preparing the American Dictionary. Those, however, who knew him best, can testify that his strength of statement, however great it might be, was never the result of arrogance or presumption. He spoke from the mere frankness of his nature; he practiced no reserve; he used none of that cautious phraseology with which most men conceal their feelings, or guard against misconstruction. He was an ardent lover of truth, and he spoke of the discoveries which he believed himself to have made, much as he would have spoken of the same discoveries when made by others. He was aware that there must be many things in a book like this, especially on a science so imperfect in its development as etymology, which would not stand the test of time. But he never doubted, even in the darkest seasons of discouragement and obloquy, that he could at last produce such a work, that the world "should not willingly let it die." The decision of the public verified his anticipations, and freed him from the charge of presumption. Three very large editions, at a high price, have already been exhausted in this country and England. The demand is still increasing

on both sides of the Atlantic; and the author might well be gratified to learn, that a gentleman who asked, some years since, at one of the principal bookselling establishments of London, for the best English dictionary on their shelves, had this work handed to him, with the remark, "That, sir, is the only *real* dictionary which we have of our language, though it was prepared by an American."

In his social habits, Dr. Webster was distinguished by dignified ease, affability, and politeness. He was punctilious in his observance of all the nicer proprieties of life. There was nothing that annoyed him more, or on which he remarked with greater keenness, than any violation of the established rules of decorum, any disposition to meddle with the concerns of others, or to encroach on the sanctity of those rights and feelings, which, as they can not be protected by law, must owe their security to delicacy of sentiment in an enlightened community. He had an uncommon degree of refinement in all his thoughts and feelings. Never, in his most sportive or unguarded moments, did any sentiment escape him which was coarse or vulgar. He had, in this respect, almost a feminine purity of mind. It might be truly said of him, as was remarked concerning one of his distinguished contemporaries in public life, that he was never known to utter an expression which might not have been used with entire freedom in the most refined female society. In his pecuniary transactions, he was acknowledged by all to be not only just, but liberal. It was a principle with him, for life, never to be in debt. Everything was paid for at the time of purchase. In all his dealings and social intercourse, he was remarkably direct, frank, and open. He had but one character, and that was "known and read of all men." Whatever faults might be imputed to him, no one ever suspected him of double dealing; no one ever thought he was capable of a mean or dishonorable action.

In the discharge of his domestic duties, Dr. Webster was watchful, consistent, and firm. Though immersed in study, he kept in his hands the entire control of his family arrangements, down to the minutest particulars. Everything was reduced to exact system; all moved on with perfect regularity and order, for *method* was the presiding principle of his life. In the government of his children there was but one rule, and that was instantaneous and entire obedience. This was insisted upon as *right*, — as, in the nature of things, due by a child to a parent. He did not rest his claim on any explanations, or on showing that the thing required was reasonable or beneficial. While he endeavored to make it clear to his children that he sought their happiness in whatever he required, he commanded as one having *authority*, and he enforced his commands to the utmost, as a duty which he owed equally to his children and to God, who had placed them under his control. He felt that on this subject there had been a gradual letting down of the tone of public sentiment, which was much to be deplored. Many, in breaking away from the sternness of Puritan discipline, have gone to the opposite extreme. They have virtually abandoned the exercise of parental authority, and endeavored to regulate the conduct of their children by reasoning and persuasion, — by the mere presentation of motives, and not by the enforcement of commands. If such persons succeed, as they rarely do, in preserving anything like a comfortable state of subordination in their families, they fail at least in the accomplishment of one great end for which their offspring were committed to their care. They send forth their children into life without any of those habits of submission to lawful authority which are essential to the character of a good citizen and a useful member of society. In the intellectual training of his children, on the other hand, Dr. Webster had much less of system and complicated machinery than many are disposed to adopt. His great principle was not to overdo, — to let nature have free scope, and to leave the development of the mind, within certain limits, to the operation of awakened curiosity directed to its proper objects. He therefore threw open his extensive library to his children at an early period of their lives, and said, in the words of Cotton Mather, "Read, and you will know." He felt that children should learn to acquire knowledge by severe effort; that the prevailing disposition to make everything easy is unphilosophical and wrong; that the great object of early training is to form the mind into a capacity of surmounting intellectual difficulties of any and every kind. In his view, also, the young have much to learn in early life, the use of which they can not then comprehend. They must learn it by rote, particularly the spelling of so complicated a language as ours; and all those systems which lead forward children no faster than they can understand and apply every word they spell, he considered as radically erroneous. He wished, on the contrary, at this early period of ready memory and limited comprehension, to store the mind with many things which would afterward be found of indispensable use; things which are learnt with the utmost reluctance, or rather, in most cases, are not learnt at all, in the more advanced stages of intellectual progress. He felt that there must necessarily be much of drudgery in the formation of a thoroughly educated mind. He thought it wise, therefore, to commence those tasks which it involves, from the earliest period at which the youthful intellect can endure them. Upon these principles he constructed his Spelling Book, and other works for the use of children. He designed to make them instructive, and not mere books of amusement. Whether his views were incorrect or unphilosophical, the public will judge.

In respect to religion, Dr. Webster was a firm believer, during a large part of his life, in the great distinctive doctrines of our Puritan ancestors, whose character he always regarded with the highest veneration. There was a period, however, from the time of his leaving college to the age of forty, when he had doubts as to some of those doctrines, and rested in a different system. Soon after he graduated, being uncertain what business to attempt, or by what means he could obtain subsistence, he felt his mind greatly perplexed, and almost overwhelmed with gloomy apprehensions. In this state, as he afterward informed a friend, he read Johnson's "Rambler" with unusual interest; and, in closing the last volume, he made a firm resolution to pursue a course of virtue through life, and to perform every moral and social duty with scrupulous exactness. To this he added a settled belief in the inspiration of the Scriptures and the governing providence of God, connected with highly reverential views of the divine character and perfections. Here he rested, placing his chief reliance for salvation on a faithful discharge of all the relative duties of life, though not to the entire exclusion of dependence on the merits of the Redeemer. In this state of mind he remained, though with some misgiving and frequent fluctuations of feeling, to the winter of 1807-8. At that time, there was a season of general religious interest at New Haven, under the ministry of the Rev. Moses Stuart, now a professor in the Andover Theological Seminary. To this Dr. Webster's attention was first directed by observing an unusual degree of tenderness and solemnity of feeling in all the adult members of his family. He was thus led to reconsider his former views, and inquire, with an earnestness which he had never felt before, into the nature of personal religion, and the true ground of man's acceptance with God. He had now to decide not for himself only, but, to a certain extent, for others, whose spiritual interests were committed to his charge. Under a sense of this responsibility, he took up the study of the Bible with painful solicitude. As he advanced, the objections which he had formerly entertained against the humbling doctrines of the gospel were wholly removed. He felt their truth in his own experience. He felt that salvation *must* be wholly of grace. He felt constrained, as he afterward told a friend, to cast himself down before God, confess his sins, implore pardon through the merits of the Redeemer, and there to make his vows of entire obedience to the commands and devotion to the service of his Maker. With his characteristic promptitude, he instantly made known to his family the feelings which he entertained. He called them together the next morning, and told them, with deep emotion, that, while he had aimed at the faithful discharge of all his duties as their parent and head, he had neglected one of the most important — that of family prayer. After reading the Scriptures, he led them, with deep solemnity, to the throne of grace, and from that time continued the practice, with the liveliest interest, to the period of his death. He made a public profession of religion in April, 1808. His two oldest daughters united with him in the act, and another, only twelve years of age, was soon added to the number.

In his religious feelings, Dr. Webster was remarkably equable and cheerful. He had a very strong sense of the providence of God, as extending to the minutest concerns of life. In this he found a source of continual support and consolation, under the severe labors and numerous trials which he had to endure. To the same divine hand he habitually referred all his enjoyments, and it was known to his family that he rarely, if ever, took the slightest refreshment, of any kind, even between meals, without a momentary pause, and a silent tribute to God as the giver. He made the Scriptures his daily study. After the completion of his Dictionary, especially, they were always lying on his table, and he probably read them more than all other books. He felt, from that time, that the labors of his life were ended, and that little else remained but to prepare for death. With a grateful sense of past mercies, a cheering consciousness of present support, and an animating hope of future blessedness, he waited with patience until his appointed change should come.

During the spring of 1843, Dr. Webster revised the Appendix of his Dictionary, and added some hundreds of words. He completed the printing of it about the middle of May. It was the closing act of his life. His hand rested, in its last labors, on the volume which he had commenced thirty-six years before. Within a few days, in calling on a number of friends in different parts of the town, he walked, during one afternoon, between two and three miles. The day was chilly, and immediately after his return, he was seized with faintness and a severe oppression on his lungs. An attack of peripneumonia followed, which, though not alarming at first, took a sudden turn after four or five days, with fearful indications of a fatal result. It soon became necessary to inform him that he was in imminent danger. He received the communication with surprise, but with entire composure. His health had been so good, and every bodily function so perfect in its exercise, that he undoubtedly expected to live some years longer. But though suddenly called, he was completely ready. He gave some characteristic directions as to the disposal of his body after death. He spoke of his long life as one of uniform enjoyment, because filled up at every stage with active labors for some valuable end. He expressed his entire resignation to the will of God, and his unshaken trust in the atoning blood of the Redeemer. It was an interesting coincidence, that his former pastor, the Rev. Mr. Stuart, who received him to the church thirty-five years before, had just arrived at New Haven on a visit to his friends. He called immediately; and the interview brought into affecting comparison the beginning and

the end of that long period of consecration to the service of Christ. The same hopes which had cheered the vigor of manhood were now shedding a softened light over the decay and sufferings of age. "I know whom I have believed," — such was the solemn and affecting testimony which he gave to his friend, while the hand of death was upon him, — "I *know* whom I have believed, and that he is able to keep that which I have committed to him against that day." Thus, without one doubt, one fear, he resigned his soul into the hands of his Maker, and died on the 28th day of May, 1843, in the eighty-fifth year of his age.

In his person, Dr. Webster was tall, and somewhat slender, remarkably erect throughout life, and moving, even in his advanced years, with a light and elastic step.

Dr. Webster's widow survived him more than four years, and died on the 25th day of June, 1847, in the eighty-second year of her age. He had seven children who arrived at maturity, — one son, William G. Webster, Esq., who resides at New Haven, and six daughters. Of these, the oldest is married to the Hon. William W. Ellsworth, of Hartford, late governor, and now judge of the Supreme Court of Connecticut; the second to the author of this sketch; the third, now deceased, was first married to Edward Cobb, Esq., of Portland, Maine, and afterward to the Rev. Professor Fowler, of Amherst, Mass.; the fourth, also deceased, was married to Horatio Southgate, Esq., of Portland, Maine, and left at her death a daughter, who was adopted by Dr. Webster, and is now married to Henry Trowbridge, Jun., Esq., of New Haven; the fifth is married to the Rev. Henry Jones, of Bridgeport, Conn.; and the sixth remains unmarried, in the family of her brother.

August, 1847.

In conclusion, it may be said that the name of NOAH WEBSTER, from the wide circulation of some of his works, is known familiarly to a greater number of the inhabitants of the United States, than the name, probably, of any other individual except the FATHER OF HIS COUNTRY. Whatever influence he thus acquired was used at all times to promote the best interests of his fellow-men. His books, though read by millions, have made no man worse. To multitudes they have been of lasting benefit, not only by the course of early training they have furnished, but by those precepts of wisdom and virtue with which almost every page is stored.

AUTHOR'S PREFACE TO THE EDITION OF 1828.

IN the year 1783, just at the close of the Revolution, I published an elementary book for facilitating the acquisition of our vernacular tongue, and for correcting a vicious pronunciation which prevailed extensively among the common people of this country. Soon after the publication of that work, — I believe in the following year, — that learned and respectable scholar, the Rev. Dr. GOODRICH, of Durham, one of the trustees of Yale College, suggested to me the propriety and expediency of my compiling a Dictionary which should complete a system for the instruction of the citizens of this country in the language. At that time, I could not indulge the thought, much less the hope, of undertaking such a work, as I was neither qualified by research, nor had I the means of support, during the execution of the work, had I been disposed to undertake it. For many years, therefore, though I considered such a work as very desirable, yet it appeared to me impracticable, as I was under the necessity of devoting my time to other occupations for obtaining subsistence.

About thirty-five years ago, I began to think of attempting the compilation of a Dictionary. I was induced to this undertaking, not more by the suggestion of friends, than by my own experience of the want of such a work while reading modern books of science. In this pursuit I found almost insuperable difficulties, from the want of a dictionary for explaining many new words which recent discoveries in the physical sciences had introduced into use. To remedy this defect in part, I published my *Compendious Dictionary* in 1806, and soon after made preparations for undertaking a larger work.

My original design did not extend to an investigation of the origin and progress of our language, much less of other languages. I limited my views to the correcting of certain errors in the best English dictionaries, and to the supplying of words in which they are deficient. But after writing through two letters of the alphabet, I determined to change my plan. I found myself embarrassed, at every step, for want of a knowledge of the origin of words, which JOHNSON, BAILEY, JUNIUS, SKINNER, and some other authors, do not afford the means of obtaining. Then, laying aside my manuscripts, and all books treating of language, except lexicons and dictionaries, I endeavored, by a diligent comparison of words having the same or cognate radical letters, in about twenty languages, to obtain a more correct knowledge of the primary sense of original words, of the affinities between the English and many other languages, and thus to enable myself to trace words to their source.

I had not pursued this course more than three or four years before I discovered that I had to unlearn a great deal that I had spent years in learning, and that it was necessary for me to go back to the first rudiments of a branch of erudition which I had before cultivated, as I had supposed, with success.

I spent ten years in this comparison of radical words, and in forming a *Synopsis of the principal Words in twenty Languages, arranged in Classes under their primary Elements or Letters.* The result has been to open what are to me new views of language, and to unfold what appear to be the genuine principles on which these languages are constructed.

After completing this *Synopsis*, I proceeded to correct what I had written of the Dictionary, and to complete the remaining part of the work. But before I had finished it, I determined on a voyage to Europe, with the view of obtaining some books and some assistance which I wanted, of learning the real state of the pronunciation of our language in England, as well as the general state of philology in that country, and of attempting to bring about some agreement or coincidence of opinions in regard to unsettled points in pronunciation and grammatical construction. In some of these objects, I failed; in others, my designs were answered.

It is not only important, but in a degree necessary, that the people of this country should have an *American Dictionary of the English Language;* for, although the body of the language is the same as in England, and it is desirable to perpetuate that sameness, yet some differences must exist. Language is the expression of ideas; and if the people of one country can not preserve an identity of ideas, they can not retain an identity of language. Now, an identity of ideas depends materially upon a sameness of things or objects with which the people of the two countries are conversant. But in no two portions of the earth, remote from each other, can such identity be found. Even physical objects must be different. But the principal differences between the people of this country and of all others arise from different forms of government, different laws, institutions, and customs. Thus the practice of *hawking* and *hunting*, the institution of *heraldry* and the *feudal system* of England, originated terms which formed, and some of which now form, a necessary part of the language of that country; but, in the United States, many of these terms are no part of our present language, and they can not be, for the things which they express do not exist in this country. They can be known to us only as obsolete or as foreign words. On the other hand, the institutions in this country which are new and peculiar give rise to new terms, or to new applications of old terms, unknown to the people of England, which can not be explained by them, and which will not be inserted in their dictionaries, unless copied from ours. Thus the terms *land-office*, *land-warrant*, *location of land*, *consociation* of churches, *regent* of a university, *intendant* of a city, *plantation*, *selectmen*, *senate*, *congress*, *court*, *assembly*, *escheat*, etc., are either words not belonging to the language of England, or they are applied to things in this country which do not exist in that. No person in this country will be satisfied with the English definitions of the words *congress*, *senate*, and *assembly*, *court*, etc.; for although these are words used in England, yet they are applied in this country to express ideas which they do not express in that country. With our present constitutions of government, *escheat* can never have its feudal sense in the United States.

But this is not all. In many cases, the nature of our governments and of our civil institutions requires an appropriate language in the definition of words, even when the words express the same thing as in England. Thus the English dictionaries inform us that a *justice* is one deputed by the *king* to do right by way of judgment; he is a *lord* by his office; justices of the peace are appointed by the *king's commission* — language which is inaccurate in respect to this officer in the United States. So *constitutionally* is defined, by CHALMERS, *legally;* but in this country the distinction between *constitution* and *law* requires a different definition. In the United States, a *plantation* is a very different thing from what it is in England. The word *marshal*, in this country, has one important application unknown in England, or in Europe.

A great number of words in our language require to be defined in a phraseology accommodated to the condition and institutions of the people in these States, and the people of England must look to an *American Dictionary* for a correct understanding of such terms.

The necessity, therefore, of a dictionary suited to the people of the United States is obvious; and I should suppose that, this fact being admitted, there could be no difference of opinion as to the *time* when such a work ought to be substituted for English dictionaries.

There are many other considerations of a public nature which serve to justify this attempt to furnish an American work which shall be a guide

to the youth of the United States. Most of these are too obvious to require illustration.

One consideration, however, which is dictated by my own feelings, but which, I trust, will meet with approbation in correspondent feelings in my fellow-citizens, ought not to be passed in silence. It is this: "The chief glory of a nation," says Dr. JOHNSON, "arises from its authors." With this opinion deeply impressed on my mind, I have the same ambition which actuated that great man when he expressed a wish to give celebrity to BACON, to HOOKER, to MILTON, and to BOYLE.

I do not, indeed, expect to add celebrity to the names of FRANKLIN, WASHINGTON, ADAMS, JAY, MADISON, MARSHALL, RAMSAY, DWIGHT, SMITH, TRUMBULL, HAMILTON, BELKNAP, AMES, MASON, KENT, HARE, SILLIMAN, CLEAVELAND, WALSH, IRVING, and many other Americans distinguished by their writings or by their science; but it is with pride and satisfaction that I can place them, as authorities, on the same page with those of BOYLE, HOOKER, MILTON, DRYDEN, ADDISON, RAY, MILNER, COWPER, DAVY, THOMSON, and JAMESON.

A life devoted to reading and to an investigation of the origin and principles of our vernacular language, and especially a particular examination of the best English writers, with a view to a comparison of their style and phraseology with those of the best American writers, and with our colloquial usage, enables me to affirm, with confidence, that the genuine English idiom is as well preserved by the unmixed English of this country as it is by the best *English* writers. . . . It is true that many of our writers have neglected to cultivate taste and the embellishments of style; but even these have written the language in its genuine *idiom*. In this respect, FRANKLIN and WASHINGTON, whose language is their hereditary mother tongue, unsophisticated by modern grammar, present as pure models of genuine English as ADDISON or SWIFT. But I may go further, and affirm, with truth, that our country has produced some of the best models of composition. The style of President SMITH; of the authors of the FEDERALIST; of Mr. AMES; of Dr. MASON; of Mr. HARPER; of Chancellor KENT; [the prose] of Mr. BARLOW; of Dr. CHANNING; of WASHINGTON IRVING; of the legal decisions of the Supreme Court of the United States; of the reports of legal decisions in some of the particular States; and many other writings, — in purity, in elegance, and in technical precision, is equaled only by that of the best British authors, and surpassed by that of no English compositions of a similar kind.

The United States commenced their existence under circumstances wholly novel and unexampled in the history of nations. They commenced with civilization, with learning, with science, with constitutions of free government, and with that best gift of God to man, the Christian religion. Their population is now equal to that of England; in arts and sciences, our citizens are very little behind the most enlightened people on earth, — in some respects they have no superiors; and our language, within two centuries, will be spoken by more people in this country than any other language on earth, except the Chinese, in Asia — and even that may not be an exception.

It has been my aim in this work, now offered to my fellow-citizens, to ascertain the true principles of the language, in its orthography and structure; to purify it from some palpable errors, and reduce the number of its anomalies, thus giving it more regularity and consistency in its forms, both of words and sentences; and in this manner to furnish a standard of our vernacular tongue, which we shall not be ashamed to bequeath to *five hundred millions of people*, who are destined to occupy, and I hope to adorn, the vast territory within our jurisdiction.

If the language can be improved in regularity, so as to be more easily acquired by our own citizens and by foreigners, and thus be rendered a more useful instrument for the propagation of science, arts, civilization, and Christianity; if it can be rescued from the mischievous influence of sciolists, and that dabbling spirit of innovation which is perpetually disturbing its settled usages and filling it with anomalies; if, in short, our vernacular language can be redeemed from corruptions, and our philology and literature from degradation, — it would be a source of great satisfaction to me to be one among the instruments of promoting these valuable objects. If this object can not be effected, and my wishes and hopes are to be frustrated, my labor will be lost, and this work must sink into oblivion.

This Dictionary, like all others of the kind, must be left, in some degree, imperfect; for what individual is competent to trace to their source, and define in all their various applications, popular, scientific, and technical, *seventy* or *eighty thousand* words! It satisfies my mind that I have done all that my health, my talents, and my pecuniary means would enable me to accomplish. I present it to my fellow-citizens, not with frigid indifference, but with my ardent wishes for their improvement and their happiness; and for the continued increase of the wealth, the learning, the moral and religious elevation of character, and the glory, of my country.

To that great and benevolent Being, who, during the preparation of this work, has sustained a feeble constitution, amidst obstacles and toils, disappointments, infirmities, and depression, — who has borne me and my manuscripts in safety across the Atlantic, and given me strength and resolution to bring the work to a close, — I would present the tribute of my most grateful acknowledgments. And if the talent which he intrusted to my care has not been put to the most profitable use in his service, I hope it has not been "kept laid up in a napkin," and that any misapplication of it may be graciously forgiven.

NOAH WEBSTER.

NEW HAVEN, 1828.

EDITOR'S PREFACE TO THE REVISED EDITION OF 1847.

THE demand for THE AMERICAN DICTIONARY OF THE ENGLISH LANGUAGE has increased so rapidly within a few years past, that the publishers have felt the necessity of its being stereotyped, for the greater convenience of the public, in a single quarto volume. In deciding upon this measure, they were desirous that the work should be thoroughly revised anew, and that each department which it embraces should be brought down, as far as possible, to the latest advances of science, literature, and the arts, at the present day. With this view, it was placed in the hands of the Rev. CHAUNCEY A. GOODRICH, Professor in Yale College, as one of the members of Dr. WEBSTER'S family, in the expectation of his obtaining such additional aid as might be necessary for the accomplishment of this design. The Editor has not acted, however, upon his own personal responsibility in executing this trust. He has, from time to time, laid open the sheets to the inspection of the other members of the family; and no important alterations have been made, especially in any of the leading characteristics of the work, except with the concurrence, or at the request, of Dr. Webster's legal representatives. In laying before the public an edition thus prepared, the fruit of nearly three years of care and attention, the Editor will be expected to make some brief statement of the principles on which he has conducted the revision, and the result of his labors, as exhibited in the present volume.

This work was first published, in two quarto volumes, in the year 1828. At the expiration of twelve years, or in the years 1840-41, a second edition was published by the Author, in two royal octavo volumes. Of this he thus speaks in the Advertisement prefixed: "The improvements in this edition of the AMERICAN DICTIONARY consist chiefly in the addition of several thousand words to the vocabulary, the division of words into syllables, and the correction of definitions in several of the sciences, which are made conformable to recent discoveries and classifications. For the latter improvements, the Author is indebted chiefly to Professor TULLY, of the Medical College in New Haven. To these improvements may be added the introduction and explanation of many phrases from foreign languages, frequently used by English authors, and in conversation; and also of many foreign terms used in books of music." In conducting this revision, Dr. Webster was aided in some part of his labors by his son, WILLIAM G. WEBSTER, Esq., of New Haven; who, also, at a subsequent period, prepared the revised Addenda, under the direction of his father. The later improvements of the Author, down to the period of his death, are here inserted under their proper heads, from the manuscripts which he left. By these successive revisions, and the one which has now been made, new matter, to the amount of more than three hundred pages, has been added to the work; all of which, by the use of a smaller type, and by careful compression, is now brought within the compass of this volume. Of the course pursued in the revision it will now be proper briefly to speak.

In respect to the *Etymologies*, the Editor has not considered it as lying within his province to make any material alterations. In a very few cases of obvious necessity, some slight change has been made. But the chief labor, in reference to this part of the work, has been bestowed on the difficult task of giving with accuracy the numerous words from Oriental and foreign languages, which are used in tracing the origin of our own.

The chief value of a dictionary consists in its *Definitions*; — in giving a clear, full, and accurate exhibition of all the various shades of meaning which belong, by established usage, to the words of a language. It is in this respect, especially, that Dr. Webster's Dictionary has been generally considered superior to every other, both of this country and of England. To this point, therefore, the labors of the Editor have been mainly directed. No efforts have been spared to obtain the most recent and valuable works, not only in lexicography, but in the various departments of science and the arts embraced in the American Dictionary. As these subjects are in a state of continual progress, every important word,

in its various applications, has been diligently examined and compared with the statements made on each topic, by the latest and most approved authorities. Smart's English Dictionary, in the edition of 1846, has been carefully collated with this work, and also the unfinished one [Craig's], in a course of publication by Gilbert, so far as the numbers have appeared. Reference has likewise constantly been made to Richardson's Dictionary, — although this had been previously examined by Dr. Webster, — and also to the Analytical Dictionary of Booth. Each of the articles in Brande's Encyclopedia of Science, Literature, and Art, has been collated with the corresponding portions of this Dictionary, as the starting-point, when necessary, of investigation in larger treatises. The Penny Cyclopedia has been consulted at every step, especially in matters of science; and the Encyclopædia Americana (based on the German *Conversations-Lexikon*) has been relied upon, particularly on subjects of Continental literature, philosophy, history, art, etc. In order to secure greater accuracy, numerous *special* dictionaries or vocabularies, confined to some single department, have also been collated with this work; and the ablest treatises on important branches of science and art have been diligently examined. In architecture, the chief reliance has been placed on the Oxford Glossary of Architecture (1845), and the Encyclopedia of Architecture (1842), by Gwilt, author of the articles on this subject in Brande's Encyclopedia. In agriculture, Johnson's Farmer's Encyclopedia (1844), and Gardner's Farmer's Dictionary (1846) have been chiefly used. In general antiquities, the large treatise of Fosbroke has been frequently consulted; while in classical antiquities, the principal reliance has been placed on the recent Dictionary of Smith (1846), as a work of the highest authority. In respect to the antiquities of the church, the elaborate work of Coleman (1841) has been frequently consulted; and Hook's Church Dictionary (1844) has been collated throughout, with reference to the rites, ceremonies, vestments, etc., of the Church of England, and also of the Roman Catholic and Greek churches. In botany, use has principally been made of the writings of Lindley and Loudon. In Natural History, Partington's British Cyclopedia of Natural History (1835-37), and Jardine's Naturalist's Library (1834-43), have been much consulted, in connection with the articles on these subjects in the Penny Cyclopedia and similar works. In geology, mineralogy, and some associated branches of natural history, Humble's Dictionary of terms in these departments (1846) has been compared with this work throughout In respect to mercantile subjects, banking, coins, weights, measures, etc., M'Culloch's Commercial Dictionary (1845) has been collated at every step, as the standard work on these subjects. In manufactures and the arts, Dr. Ure's Dictionary of Manufactures, Arts, and Mines, with its Supplement (1845), has been relied upon as of the highest authority. In engineering and mechanical philosophy, Hebert's Engineer's and Mechanic's Cyclopedia (1842) has been carefully collated, with a constant reference to the more popular and recent Dictionaries of Francis, Gner, and Buchanan, in the editions of 1846. In seamanship, the Dictionary of Marine Terms, in Lieutenant Totten's Naval Text-Book (1841), has been taken as a guide. In military affairs, the Dictionary of Campbell (1844) has been followed, in connection with the more extended articles contained in Brande and the Penny Cyclopedia, on the kindred topics. In the fine arts, much use has been made of the Dictionary of Elmes. In domestic economy, the Encyclopedia of Webster and Parkes on this subject (1844) has furnished many important statements, on a great variety of topics, presented for the first time in a scientific form; and to this has been added Cooley's Cyclopedia of Practical Receipts (1846), as exhibiting much collateral information in respect to the arts, manufactures, and trades. Such, in general, are the authorities which have been relied on in this revision.

But it is obviously impossible for any one mind to embrace with accuracy all the various departments of knowledge which are now brought within the compass of a dictionary. Hence arise most of the errors and inconsistencies which abound in works of this kind. To avoid these as far as possible, especially in matters of science, the Editor at first made an arrangement with Dr. James G. Percival, who had rendered important assistance to Dr. Webster in the edition of 1828, to take the entire charge of revising the scientific articles embraced in this work. This revision, however, owing to causes beyond the control of either party, was extended to but little more than two letters of the alphabet; and the Editor then obtained the assistance of his associates in office, and of other gentlemen in various professional employments. To these he would now return his acknowledgments for the aid they have afforded. The articles on law have been collated with Blackstone, and with Bouvier's Law Dictionary, by the Hon. Elizur Goodrich, formerly Professor of Law in Yale College, and the errors discovered, which were few in number, have been carefully corrected. The departments of ecclesiastical history and ancient philosophy have been thoroughly revised by the Rev. James Murdock, D. D., late Professor in the Andover Theological Seminary, who has furnished, in many instances, new and valuable definitions. The terms in chemistry have been submitted to Professor Silliman, of Yale College; and whatever changes were requisite in the explanations have been made under his direction. In the departments of botany, anatomy, physiology, medicine, and some branches of natural history, Dr. Webster received assistance, in the revision of 1840, as mentioned above, from Dr. William Tully, late Professor in the Medical Institution of Yale College. Still further aid has been received from the same source in the present revision, and much of the accuracy of this work, in these branches, will be found owing to the valuable assistance he has thus afforded. On topics connected with Oriental literature, aid has frequently been obtained from Professor Gibbs, of Yale College. A part of the articles on astronomy, meteorology, and natural philosophy, in the edition of 1828, passed under the revision of Professor Olmsted, of Yale College. This revision has now been extended to all the articles on these subjects throughout the work, and new definitions have been furnished in numerous instances. The definitions in mathematics, after having been compared with those given in the Dictionaries of Hutton and of Barlow, have been submitted to Professor Stanley, of Yale College, and the alterations have, in all cases, been made under his direction. In the sciences of geology and mineralogy, a thorough revision of the whole volume has been made by James D. Dana, Esq., Geologist and Mineralogist of the United States Exploring Expedition, and associate editor of the American Journal of Science and Arts, to whom the editor is likewise indebted for assistance on various other subjects, which has greatly enhanced the value of the work. In practical astronomy, and the science of entomology, aid has been frequently received from Edward C. Herrick, Esq., Librarian of Yale College. The articles on painting and the fine arts have, to a great extent, passed under the inspection of Nathaniel Jocelyn, Esq., Painter, of New Haven, and new definitions have in many cases been furnished.

A correspondence has likewise been carried on with literary friends in England, and especially with one of the contributors to the Penny Cyclopedia, with a view to obtain information on certain points, in respect to which nothing definite could be learned from any books within the reach of the Editor. Extended lists of words have been transmitted for examination, and returned with ample notes and explanations. Much obscurity has thus been removed in respect to the use of terms which have a peculiar sense in England, especially some of frequent occurrence at the universities, in the circles of trade, and in the familiar intercourse of life. To the friends who have given their assistance in these various departments the Editor would return his cordial thanks. Whatever improvement the work may have gained from this revision, in respect to clearness, accuracy, and fullness of definition, will be found owing, in a great degree, to the aid which they have thus afforded.

With regard to the insertion of *new words*, the Editor has felt much hesitation and embarrassment. Some thousands have been added in the course of this revision, and the number might have been swelled to many thousands more, without the slightest difficulty. There is, at the present day, especially in England, a boldness of innovation on this subject which amounts to absolute licentiousness. A hasty introduction into our dictionaries, of new terms, under such circumstances, is greatly to be deprecated. Our vocabulary is already encumbered with a multitude of words, which have never formed a permanent part of English literature, and it is a serious evil to add to their number. Nothing, on the contrary, is so much needed as a thorough expurgation of our dictionaries in this respect - the rejection of many thousands of words, which may properly find a place in the glossaries of antiquarians, as a curious exhibition of what has been *proposed*, but never *adopted*, as a part of our language, but which, for that reason, can have no claim to stand in a dictionary designed for general use. All words, indeed, which are necessary to an understanding of our great writers, such as Bacon, Spenser, Shakespeare, etc., ought, though now obsolete, to be carefully retained; and in the present revision a considerable number of this class have been introduced for the first time. Other words have likewise been admitted, to a limited extent, namely, the familiar terms of common life in England, which have been much used of late by popular writers in Great Britain. Many of these need to be explained for the benefit of the readers in this country; and, if marked as "familiar," "colloquial," or "low," according to their true character, they may be safely inserted in our dictionaries, and are entitled to a place there, as forming a constituent part of our written and spoken language. One of the most difficult questions on this subject relates to the introduction of technical and scientific terms. Most of our general dictionaries are, at present, without any plan as to the extent and proportion in which such words should be inserted; nor can they ever be reduced to order until each department is revised by men of science who are intimately acquainted with the subjects, and who are competent to decide what terms ought to be admitted into a general dictionary, and what terms should be reserved for *special* dictionaries devoted to distinct branches of science. Something of this kind, on a limited scale, has been attempted in the progress of this revision. Lists of words have been obtained from the gentlemen mentioned above which might properly be inserted in this volume; and very few terms of this class have been admitted except under their direction. In accordance with their advice, a small number have been excluded; but in this respect the Editor has not felt at liberty to carry out his views in their full extent.

In respect to *Americanisms*, properly so called, it is known to those who are conversant with the subject, that they are less numerous than has been generally supposed. Most of those familiar words, especially of our older States, which have been considered as peculiar to our country, were brought by our ancestors from Great Britain, and are still in constant use there as local terms. The recent investigations of Forby,

Holloway, and Halliwell have thrown much light on this subject; and the names of these authors are, therefore, frequently placed under the words in question, to indicate their origin and their present use in England. Notes have also been added to some words which are peculiar to our country; but their number is comparatively small.

In reference to *Orthography*, some important alterations have been made, but in strict conformity, it is believed, with the Author's principles on this subject. The changes in our orthography recommended by Dr. Webster are of two distinct kinds, and rest on very different grounds. These it may be proper for a moment to consider. His main principle was, that *the tendencies of our language to greater simplicity and broader analogies ought to be watched and cherished with the utmost care.* He felt, therefore, that whenever a movement toward wider analogies and more general rules had advanced so far as to leave but few exceptions to impede its progress, those exceptions ought to be set aside *at once*, and the analogy rendered complete. On this ground, he rejected the *u* from such words as *favour*, *labour*, etc. Of these we have a large number, which came to us, in most cases, from Latin terminations in *or*, through the Norman French, but encumbered with the silent *u*, as in *emperour*, *authour*, *editour*, etc. From this entire class, except about twenty words, the *u* has been gradually dropped; and in respect to these, scarcely any two persons can be found, however strenuous for retaining it, who are in *practice* consistent with each other, or with themselves, as to the words in which this letter is used. In fact, we have reached a point where, unless we take Webster and the dictionaries which agree with him as our guide, we have *no standard on the subject;* for Johnson, Walker, and others retain the *u* in numerous words into which no one would think of introducing it at the present day. Public convenience, therefore, demands that we do at once what must ultimately be done. No one can believe that the progress of our language will be arrested on this subject. The *u* will speedily be omitted in all words of this class, unless, from the sacredness of its associations, it be retained in *Saviour*, which may stand for a time as a solitary exception. Nor is it Dr. Webster who is the innovator in this case, but the English mind, which has for two centuries been throwing off a useless encumbrance, and moving steadily on toward greater simplicity in the structure of our language. Such, too, is the case with certain terminations in *-re*, pronounced like *-er;* as, *centre*, *metre*, etc. We have numerous words of this class, derived from the French, all of which originally ended in *-re*, as, *cider* (*cidre*), *chamber* (*chambre*), etc. These have been gradually conformed to the English spelling and pronunciation, till the number in *-re* is reduced to not far from twenty words, with their derivatives; and in respect to them also the process is still going on. *Center* is, to a considerable extent, the spelling of the best mathematical writers *Meter* is the word given by Walker in his Rhyming Dictionary, from a sense of the gross inconsistency of attaching to this word and its derivative, *diameter*, a different termination Others are gradually undergoing the same change Dr. Webster proposes, therefore, to complete the analogy at once, and conform the spelling of the few that remain to the general principles of our language. *Acre*, *lucre*, and *massacre* present the only difficulty, from their liability, if changed, to be mispronounced, and may therefore be suffered to stand as *necessary* exceptions. Another departure from the principles of English orthography which Dr. Webster has endeavored to correct, is one that was pointed out by Walker, in very emphatic terms, nearly fifty years ago. The principle in question is this, — that, in adding to a word the formatives *-ing*, *-ed*, *-er*, etc., a single consonant (if one precedes) is doubled when the accent falls on the *last* syllable, as in *forgetting*, *beginning*, etc., but *is not doubled when the accent falls on any of the preceding syllables*, as in *benefiting*, *gardening*, etc. Walker, in his fifth Aphorism, says, "Dr. Lowth justly remarks that an error frequently takes place in the words *worshipping*, *counselling*, etc., which, having the accent on the first syllable, ought to be written *worshiping*, *counseling*. An ignorance of this rule has led many to write *bigotted*, for *bigoted*, and from this spelling has frequently arisen a false pronunciation. But no letter seems to be more frequently doubled improperly than *l*. Why we should write *libelling*, *levelling*, *revelling*, and yet *offering*, *suffering*, *reasoning*, I am totally at a loss to determine; and unless *l* can give a better plea than any other letter of the alphabet for being doubled in this situation, I must, in the style of Lucian, in his trial of the letter *T*, declare for an expulsion." These were the deliberate and latest opinions of Walker. If he had taken the trouble to carry them into his vocabulary, instead of relying on a mere remark of this kind for the correction of the error, — if he had simply stated, under about forty verbs, how the participle should be spelt (for he did not give participles in his Dictionary), and had altered six or eight words, as *worshipper* into *worshiper*, *traveller* into *traveler*, etc., the error would probably, by this time, have been wholly eradicated from our orthography, and Dr. Webster would have escaped much ignorant vituperation for following in the footsteps of Walker and of Lowth. Walker also says in his Aphorisms, "Why should we not write *dullness*, *fullness*, *skillful*, *willful*, as well as *stiffness*, and *gruffness*?" The principles of our language plainly require us to do so; and Dr. Webster felt that the change might easily be made. The words which need to be reduced to this analogy are only about eight in number, including *installment* and *inthrallment*, which, if spelt with a single *l*, are liable to be mispronounced *instălment*, etc. Again, the words *expense*, *license*, *recompense*, which formerly had a *c* in the last syllable, have now taken an *s*, because the latter consonant is the only one used in the derivatives; as, *expensive*, etc. A similar change is needed in only three words more to complete the analogy, namely, *defense*, *offense*, and *pretense;* and these Dr. Webster has changed. It is sometimes asked, "Why not change *fence* also?" For the simple reason, that its derivatives are spelt with a *c*, as *fenced*, *fencing;* and the word, therefore, stands regularly with others of its own class. Finally, Dr. Webster proposes to drop the *u* in *mould* and *moult*, because it has been dropped from *gold*, and all other words of the same ending. Such are the principal changes, under this head, introduced by Dr. Webster into his Dictionary. In the present edition, the words are spelt in both ways, for the convenience of the public, except in cases where this seemed to be unnecessary, or was found to be inconvenient. These changes, considering the difficulty that always belongs to such a subject, have met with far more favor from the public than was reasonably to be expected. Most of them have been extensively adopted in our country. They are gaining ground daily, as the reasons by which they are supported are more generally understood; and it is confidently believed that, being founded in established analogies, and intended merely to repress irregularities and remove petty exceptions, they must ultimately prevail.

The other class of changes mentioned above rests on a different basis — that of *Etymology*. These will be estimated very differently, according to the acquaintance of different persons with the languages from which the words are derived. When Dr Webster substituted *bridegoom* for *bridegroom*, *fether* for *feather*, etc., the German critics highly applauded the change. They predicted its speedy and universal reception, because similar improvements, on a much broader scale, had been easily made in their language. But Dr. Webster found the case to be widely different among us. After an experiment of twelve years, he restored the old orthography to a considerable number of such words. In the present edition, it is restored in respect to nearly all that remain, from the full conviction, that, however desirable these changes may be, in themselves considered, as they do not relate to the general analogies of the language, and can not be duly appreciated by the body of the people, they will never be generally received.

On the subject of *Pronunciation*, much labor has been bestowed in the progress of this revision. A careful comparison has been made with the latest authorities, and wherever changes seemed desirable, and could be made in consistency with the Author's principles, they have been here introduced. The Key to Pronunciation has been somewhat enlarged, and placed at the bottom of each page, for greater ease of reference, and the pointed letters have been used to a still greater extent. Many thousand words have been respelled, and no efforts have been spared to render the work, in all respects, a complete *Pronouncing Dictionary*. In the progress of these labors, the Editor has been frequently struck with the wisdom of Dr. Webster, in not attempting too much as to marking the pronunciation. Most of the later orthoepists, as Knowles, Smart, etc., have made their system of notation so extensive and complicated, and have aimed to exhibit so many nice shades of distinction, as in many cases to perplex, rather than aid.

The Publishers, being desirous to make this, in all respects, a complete work of reference, have introduced, at the close of the volume, a list of Greek and Latin Proper Names, with their pronunciation, prepared by Professor THACHER, of Yale College; a list of Scriptural Proper Names, prepared by Professor PORTER, of Yale College; and a Pronouncing Vocabulary of Modern Geographical Names, prepared also under the superintendence of Professor Porter. Of these a full account will be found in the several prefaces by which they are accompanied.

In conclusion, the Editor would acknowledge his obligations to the gentlemen who have aided him for more than two years in these labors — Mr. SAMUEL W. BARNUM, M. A., of Yale College, and WILLIAM G. WEBSTER, Esq., of New Haven. The intimate acquaintance of the latter with his father's views has made his council and cooperation of great value in the progress of this revision.

To the overseers of the mechanical execution of this work, at the BOSTON TYPE AND STEREOTYPE FOUNDRY, the Editor would likewise make his acknowledgments for many valuable suggestions during the progress of the revision, and for the watchful care and assiduity with which they have performed the difficult task of giving accuracy to the details of this volume.

NEW HAVEN, *September*, 1847.

NOTE. — Among the sources from which words not in former editions have been derived, mention should be made of a catalogue of between five and six thousand, furnished by President ALLEN, late of Bowdoin College, which were collected by him in the course of his reading, during a period of forty years, from several hundred volumes of general literature, and given for the most part with authorities annexed This catalogue, added to a similar list formerly furnished to Dr. Webster, makes an aggregate of some thousands of new words placed in the hands of the Author and Proprietor of this Dictionary, thus contributing materials for its improvement.

EDITOR'S PREFACE TO THE EDITION OF 1864.

SINCE the publication of the REVISED EDITION OF WEBSTER'S DICTIONARY in 1847, the purpose has been kept steadily in view to prepare another edition, embracing all the alterations and improvements which the progress of the language and the additional facilities for improving its Lexicography might seem to require. The late Professor GOODRICH had, from the first, directed his attention to the collection of words not inserted in the previous edition, and to the preparation of definitions of meanings which had been overlooked, or were made necessary by new applications of words in the writings of respectable authors, and by the progress of Science and the Arts.

Many of these words and definitions were given to the public in the Pictorial Edition of 1859, together with numerous illustrative wood cuts. To these was added a large collection of discriminated Synonyms, which had been carefully prepared by Professor Goodrich. This edition was, however, a provisional one, designed to serve only until the more careful and thorough revision, which had been so long in contemplation, could be perfected.

In preparing for the present revision, the attention of both the Editor and the Publishers was first directed to the Etymology. They were aware that, however admirable the industry and valuable the contributions of Dr. WEBSTER in this department, the science of comparative Philology was by no means perfect in his time, if indeed it could be said to exist at all. It is only within a very few years that the true principles on which this science rests have been suggested and confirmed, and the methods have been determined by which future investigations may be successfully prosecuted. It seemed necessary, first of all, that these new principles and methods should be applied in the entire revision of the Etymologies of Dr. Webster, by a scholar who had made Etymology his special study. In 1854, arrangements were made with Dr. C. A. F. MAHN, of Berlin, Prussia, to undertake this task. Dr. Mahn was recommended by some of the most distinguished scholars of Germany as admirably qualified for the service, and he had been favorably known by special researches in this department. He has employed several years upon the work, and has performed it in a manner worthy of his high reputation. The results are submitted to all persons who are interested in philological studies, with the belief that they will find in them a new and valuable contribution to the stores of linguistic knowledge. This feature of the present edition will, it is thought, be acknowledged by all scholars as one of marked superiority, and will be gratefully welcomed by the now very large number of instructors and studious persons who are interested in acquiring a more thorough knowledge of the English language.

Professor JAMES D. DANA, of Yale College, had been engaged, at an early date, to revise the definitions in Geology, Natural History, etc., and the revision in these and some kindred departments has been completed by him, or has passed under his careful scrutiny.

The work of revising the definitions of the principal words occasioned great and perplexing difficulties to Professor Goodrich and those with whom he conferred. He was well aware of the defective method which had been adopted by Dr. JOHNSON, of defining words by enumerating and explaining their special applications rather than by developing their broadly distinguished meanings, and he knew that in this, Johnson had furnished the model for most, if not all, of the defining dictionaries of the English language which have since been published. Dr. Webster, in his strictures on Johnson's Dictionary, noticed, as one of its defects, that the author had, in many cases, failed to exhibit full and explicated definitions of important significations. This fault Dr. Webster endeavored to avoid, and with manifest success. His own definitions are superior to those of Johnson in fullness and precision, as well as in the greater copiousness and appropriateness of illustrative phrases. But he had not emancipated himself entirely from the influence of Johnson's example in accumulating definitions that are really the same, though at first sight they may appear to be different. Dr. Webster insists, also, with earnestness, that it is the duty of the lexicographer to give first the primitive signification of every word, and to develop and arrange the dependent meanings in the order in which they were derived. But his theory in respect to these and other points was better than his practice. Of these and other imperfections in Dr. Webster's definitions, Professor Goodrich was fully aware. He was also aware that the dictionaries of many other languages, both ancient and modern, had been constructed on a better theory and after better methods. He had formed for himself a conception, more or less distinct, of the proper method of exhibiting and illustrating the definitions of the leading words. But it seemed to him an Herculean task to undertake to revise the work of Dr. Webster, and he was reluctant to assume the labor and responsibility which it involved. At last, with enfeebled bodily strength, he consented to enter upon a tentative process in connection with able and experienced associates. These associates were, at first, Mr. WILLIAM G. WEBSTER, the Rev. CHAUNCEY GOODRICH, and Professor CHESTER S. LYMAN, of Yale College, all of whom had been employed in preparing the Pictorial Edition. Only repeated trials could satisfy so conscientious a lexicographer as Professor Goodrich in respect to the best plan of subjecting to new forms of expression the mass of valuable matter accumulated by Dr. Webster, and of rearranging it according to more approved methods. The undertaking involved so much labor, and required changes so extensive and material, that Professor WILLIAM D. WHITNEY and Professor DANIEL C. GILMAN, both of Yale College, were soon added to the corps of associates. To these gentlemen was assigned the special duty of suggesting the changes and modifications which seemed to be required in the definitions of the principal words, their suggestions being submitted to Professor Goodrich for his judgment and decision. Under this arrangement the work of experiment was going on till the death of Professor Goodrich. This untoward event occurred, however, before the experiment had been carried so far as to determine how much it was desirable to attempt in the way of recasting the definitions, or how much it was practicable to accomplish.

After the death of Professor Goodrich, in 1860, the direction of the work of revision was committed to Professor NOAH PORTER, who had been intimately acquainted with his views ever since the publication of the Revised Edition of 1847, and had frequently conferred with him in respect to the excellencies and the defects of that edition, as well as the methods by which these defects might be remedied. Before the present revision was undertaken, Professor Porter had communicated in writing his views of the changes which ought to be made in the matter and form of the Dictionary; and, with a full knowledge of these views, Professor Goodrich had earnestly solicited him to undertake the entire responsibility and direction of the work. When the proposal was renewed by the proprietors of the copyright and by the family of Dr. Webster, it could not easily be declined; for it was enforced by considerations of affection and of duty, both to the living and to the dead. But the service was assumed by him with great reluctance, as being foreign to his special studies, and incompatible with very pressing occupations. At the urgent solicitation of his valued friends the publishers, as well as of the family interested, and of his beloved associate the late EDWARD C. HERRICK, — whose acquaintance with the Dictionary, and whose interest in it, extended back to the publication of the first edition in 1828, — he at first consented to undertake a general superintendence of the revision, but soon, by the force of circumstances, was constrained to bestow upon it a more minute attention. The collaborators already named continued their services to the end, and others were from time to time employed for a longer or a shorter period.

The following persons have been actively engaged in the preparation of the work. Mr. WILLIAM G. WEBSTER, — who has for many years labored in this field, first in connection with his honored father, and subsequently with Professor Goodrich, — has represented the views of his father and of the family, in respect to all questions of doubt or difficulty, and has also attended to the syllabication of the words, the determination of the accents, and the marking of the pronunciation. Professors WILLIAM D. WHITNEY and DANIEL C. GILMAN have labored at the definitions of the principal words, recasting, rearranging, and condensing them, introducing citations, etc.; their work, in all cases, having been sanctioned or revised by the Editor. Professor CHESTER S. LYMAN has given his attention chiefly to the terms in Mathematics, Physics, Technology, and Machinery, with the exception of those relating to the Steam Engine and to Railways. These last have been carefully defined, and in some cases furnished, by ALEXANDER L. HOLLEY, Esq., an eminent Civil Engineer of New York, who has also contributed many original valuable drawings for the illustrative wood cuts. Captain WILLIAM P. CRAIGHILL, of the United States Engineers, recently Assistant Professor of Military and Civil Engineering and the Science of War in the Military Academy at West Point, has given a like attention to the terms in Military Science, Engineering, and Gunnery, furnishing original drawings when necessary. It has already been stated that Professor JAMES D. DANA had several years since been employed in the departments of Geology, Natural History, etc., to prepare new definitions, to recast the old, and to select new words. At his suggestion, WILLIAM C. MINOR, M. D., was employed to render assistance in these departments, and he has labored with great ability and zeal in connection with Professor Dana, who has, in every

instance, carefully reviewed and expressly sanctioned his work. The terms pertaining to Musical Science and Art were chiefly prepared or revised by LOWELL MASON, Esq., of New York; but many of the articles were written by JOHN S. DWIGHT, Esq., of Boston. In Physiology and Medical Science, Professor R. CRESSON STILES, M. D., has furnished many carefully considered definitions and emendations. The Hon. J. C. PERKINS, of Salem, Massachusetts, who has had long experience as editor of various law publications, has, with great labor and care, revised the terms of Law and Jurisprudence. He has aimed to phrase these definitions in the more exact language which is required by the advance of Legal Science, and to support them by copious references to legal authorities. E. B. O'CALLAGHAN, LL. D., of Albany, has revised and rewritten the definitions of such terms as have special meaning in the Roman Catholic Church. It having been deemed desirable slightly to condense some of the etymological articles furnished by Dr. Mahn, and to translate portions of them into English, this work was committed to the care of Mr. EUGENE SCHUYLER, under the direction of Professor JAMES HADLEY, of Yale College. The derivation of a number of words of Indian origin has been furnished by the Hon. J. HAMMOND TRUMBULL, of Hartford, well known as a learned and accurate student of the aboriginal languages of America.

To the Rev. CHAUNCEY GOODRICH was committed the very important duty of receiving the mass of material furnished by the most of the assistants who have been named, verifying its accuracy, and then incorporating it into the final copy for the printer. In this work he was assisted for several months by the Rev. FISK P. BREWER and the Rev. JOHN M. MORRIS. Mr. Goodrich has also revised or prepared many of the definitions in Agriculture and Horticulture, in Antiquities and Architecture, in Biblical matters and Ecclesiastical History, in Commerce Domestic Economy, and the Fine Arts, making use of the best authorities in each of these departments. He has also brought to the service the results of his own experience while laboring under his father's guidance, and the remembrance of his father's views and wishes in respect to many important details.

It was thought desirable, in order to secure the greatest possible accuracy and perfection to the copy, to place it for further revision in the hands of some scholar of critical habits and approved experience, who had not been concerned in its earlier preparation. Accordingly, Mr. WILLIAM A. WHEELER was employed for this service, and also to correct the proof sheets; and with him was associated, at a later period, Mr. ARTHUR W. WRIGHT. Mr. Wheeler was also employed in various other services hereafter to be named; and he has furnished especially valuable contributions from his ample literary stores, and given the work throughout the benefit of his exact learning and his nice discrimination. Mr. William G. Webster shared with Mr. Wheeler and Mr. Wright the responsibility of correcting the proofs. Mr. SAMUEL PORTER, of Hartford, besides reading a portion of the first proofs, has examined with great care the final or plate proofs; and the Dictionary is much the better for his detection of oversights, and for the alterations he has suggested. Valuable assistance has been received from various persons connected with the Boston Stereotype Foundry, especially from Mr. THOMAS HOLT, the Reader of the establishment, whose taste, experience, conscientious fidelity, and accurate but unpretending scholarship, have materially benefited the work.

The preparation of the Appendix was intrusted almost entirely to the supervision of Mr. Wheeler, who has read every page of it with critical care. The "Pronouncing Vocabulary of Scripture Names" was wholly prepared by him, and he constructed the very interesting and valuable "Vocabulary of the Names of Noted Fictitious Persons, Places, etc." The full and accurate "Pronouncing Vocabulary of Greek and Latin Proper Names" was prepared with much labor and care by Professor THOMAS A. THACHER, of Yale College. The "Pronouncing Vocabularies of Modern Geographical and Biographical Names" are the work of Dr. JOSEPH THOMAS, of Philadelphia, the well-known editor of Lippincott's Pronouncing Gazetteer of the World, and his name will be a sufficient guaranty for their trustworthiness and value. The "Etymological Vocabulary of Modern Geographical Names" was prepared by the Rev. CHARLES H. WHEELER, of Cambridge, Massachusetts, who also prepared the Explanatory Vocabulary of Christian Names, from materials furnished in part by CHARLES J. LUKENS, Esq., of Philadelphia. The Table of "Arbitrary Signs used in Writing and Printing" was originally prepared by Professor Lyman, and has been revised for this edition by Mr. Wright and Mr. William A. Wheeler. Mr. William G. Webster, with the assistance of several of the other collaborators, has revised and greatly improved the list of "Abbreviations and Contractions used in Writing and Printing," and the list of "Quotations, Words, Phrases, Proverbs, etc., from the Greek, the Latin, and Modern Foreign Languages," which were originally compiled by him. A particular account of the various vocabularies will be found in the general Preface to the Appendix, and in the special Prefaces to the Vocabularies themselves.

The elaborate and learned Introduction to the previous editions has been omitted. It is not without regret that this venerable memorial of the enterprise, the sagacity, and the scholarship of Dr. Webster, has been displaced to make room for new matter more in accordance with the advance of Philological Science and the wants of the present generation. To supply its place, Professor JAMES HADLEY has contributed "A Brief History of the English Language," designed to show its philological relations, and to trace the progress and influence of the causes which have brought it to its present condition. Professor Hadley has also contributed his advice in respect to numerous questions, philological and general, which were constantly arising, and has given his sanction to the principles and aims that have guided the Editor and his collaborators in the changes which have been adopted in this edition.

* * * * * * * * * * * * * *

The "Principles of Pronunciation," originally prepared by Professor Goodrich for the edition of 1859, have been carefully revised and much expanded by Mr. Wheeler, whose attention had been previously directed to this subject in the preparation of "A Manual of English Pronunciation and Spelling" (Boston, 1861). Mr. Wheeler has also revised and much enlarged the "Synopsis of Words Differently Pronounced by Different Orthoëpists," which was originally prepared by Dr. JOSEPH E. WORCESTER, and inserted in the Octavo Abridgment of Webster's "American Dictionary," and which was afterward revised by Professor Goodrich.

* * * * * * * * * * * * * *

The features of the present edition which deserve to be specially enumerated are the following:—

I. *The Revised Etymology.* This feature has already been noticed. It is believed that critical readers will acknowledge the learning, the brevity, the sound judgment, the self-explaining order, and the minutely traced ramifications, which characterize these etymologies, and it is hoped that they will attract the attention and stimulate the studies of all who desire to know more of the varied history of their mother tongue.

II. *The Revised Definitions.* The definitions of the principal words, not scientific or technical, have been carefully elaborated by Professors Whitney and Gilman, each possessing peculiar qualifications, and each performing his work as thoroughly as was possible within the limits prescribed. Their work was carefully reviewed by the Editor before it was admitted into the copy. The rule which he adopted for his own guidance was freely to accept and make any change in the matter and the language of the previous edition which he had reason to suppose would be desired by Dr. Webster himself, were he now living, and fully possessed of the principles which have been universally accepted by modern philologists and lexicographers, or which Professor Goodrich would have sanctioned, had he been able to give to the work of revision the full measure of his well-known energy and sagacious judgment. In accordance with this rule, great pains have been taken, 1. To contract and condense the definitions into as few general heads, or numbered divisions, as was practicable. In this the example of Dr. Goodrich, in his experimental work, was followed, and the Revisers have sought to avoid all redundancy and tautology, to strike out all mere enumerations of particular applications of meanings, and to reduce the number of illustrative phrases to the actual wants of the reader. While they have been thus bold on the one hand, they have been studiously careful, on the other, to retain the exact language of the earlier edition, in every case possible, esteeming very highly Dr. Webster's plain and clearly-expressed definitions for their own sake as well as for that of the author, and preferring to err on the side of cautious reverence rather than on that of thoughtless innovation. In many cases in which the numbered articles under a word have been diminished, it will be found that the number of real definitions has been materially increased, and that the gathering of them into fewer groups has contributed to their more easy comprehension and more ready use. A single article often includes a group of kindred meanings, and thus enables the reader to view at a glance their close relation and similarity, and to trace out the subtle movement of thought by which one was evolved from another. Often, too, a well-chosen citation from a good author has been preferred, as a means of definition, to an explanatory circumlocution. 2. An effort has been constantly made to develop and arrange the several meanings and groups of meanings in the order of their actual growth and history, beginning, if possible, with the primitive signification, as indicated by the etymology. As this, for many reasons, has now become possible in numerous cases in which it was impossible in the time of Dr. Webster, and as, in many instances, Dr. Webster did not perfect this order when the materials were within his reach, it has been often found necessary, in the present edition, to change the arrangement of the definitions. Special consideration has been given to this point in view of the fact that the study, or even the casual notice, of the order of growth in the meanings of single words, is a stimulant of thought, and the habitual attention to it is of itself an education. 3. Many new meanings have been added, either as they have been brought to light by an extended examination of authors in the earlier and later periods of English literature, or as they have occurred to the Revisers in performing their work, or have been suggested by the kindness of critical and thoughtful friends.

III. *The Illustrative Citations.* Special effort has been made to obtain illustrative passages from classical English writers, both old and new. In order to collect such passages, and also to discover words and meanings that had been omitted in other English Dictionaries, a systematized

plan was devised by which a large number of works in all departments of literature were carefully read by many competent persons, and a copious collection of illustrative passages was placed at the disposal of the Revisers. The principal dramatic authors, and various prose writers, of the age of Queen Elizabeth, were read with care by Mr. H. S. DANA. The plays of Shakespeare and the poetry of Milton were carefully studied by the aid of the excellent Concordances of Mrs. Mary Cowden Clarke and Mr. Guy Lushington Prendergast, with particular reference to any special usage which these poets have sanctioned. The most prominent in the long series of English writers, down to the latest, have been read for the purpose of selecting illustrations, especially those writers whose use of language is particularly idiomatic or classical. Sir Walter Scott, Southey, Coleridge, Lamb, Byron, Washington Irving, De Quincey, Macaulay, Tennyson, Hawthorne, and many others, have received as much attention as the older writers. A comparatively small portion only of the passages which were marked and copied has been actually used, it being thought undesirable to multiply such passages when they were required for no valuable end. In cases where to cite a passage would serve no purpose in illustrating a meaning or justifying the use of a word, the name only of the author has been given, provided, as in the case of words obsolete or not now approved, the authority of some writer was deemed desirable. The free use of this large and varied collection of citations will, it is thought, add greatly to the value and interest of the present edition. It is believed that no dictionary of the language contains so many apt illustrations from so large a variety of writers. The citations which have been retained from the preceding editions, as well as those introduced for the first time, have, as far as possible, been verified and copied with scrupulous care. Such passages were preferred as would throw additional light upon the definitions, or as possessed any interest of thought or of language.

IV. *The Vocabulary.* No pains have been spared to introduce additional words, provided they were of such a character as to deserve insertion. At the same time, the Revisers have been actuated by no desire to swell the list to the greatest possible number. Words which were the offspring of the individual conceit of a whimsical or lawless writer, which did not conform to the analogies of the language, and which were never accepted or approved by good writers, of their own or a subsequent generation, have not been admitted. On the other hand, new words which have been acknowledged and approved as good have been carefully garnered, whether used by old authors or new. A great number of obsolete or obsolescent words, which were once accepted and freely used, have been recovered by the readings and researches that were directed in part to this end. Self-explaining compounds have been designedly omitted by hundreds, if not by thousands, while care has been taken to introduce and explain all those which need to be defined. It will be observed, however, that this edition differs from the former editions in following a strictly alphabetical arrangement of all such words. The participles, participial adjectives, and verbal nouns in most cases do not appear in the vocabulary as separate words, but are given under the verbs from which they are formed, and which explain their meaning. But the participial adjectives and verbal nouns have a separate place and treatment, in those cases in which they have obtained a meaning different from that which they derive from the verbs to which they belong. The principal parts of the verbs, regular and irregular, are given together, within brackets, under the verb, instead of being entered and defined separately. But the principal parts of the *irregular* verbs are usually inserted in their proper alphabetical places, with a simple cross reference to the verbs themselves. A similar course has been pursued in regard to the comparative and superlative degrees of many adjectives, and the irregular plurals of nouns. The vocabulary, as a whole, though not constructed for any display of enumerated titles, will be found to be greatly increased and enriched. It comprises an aggregate of upward of 114,000 words.

V. *The Scientific and Technical Definitions* have been carefully revised and elaborated by very able gentlemen, and with the aid of the best authorities. Many of the articles, it is believed, will command confidence and elicit commendation for their scientific value, while their brevity and plain language fit them for the use and instruction of all classes.

VI. *The Collection of Synonyms*, so carefully prepared by Professor Goodrich, has, with a few slight changes, been incorporated into the body of the work for greater facility of reference. The number of the words thus defined and distinguished is far greater than the number of separate articles would seem to indicate. The meanings are thoroughly discriminated in every case, the words being traced from their etymology, and explained by formal definitions, as well as illustrated by contrasted examples of their various use. In addition, copious lists of synonymous or interchangeable terms have been attached to most of the important words, for the convenience of teachers and inexperienced writers.

VII. *The Pictorial Illustrations*, more than three thousand in number, have been inserted in the body of the work; in the previous edition they were printed as an appendix to the volume, but it was thought it would be an improvement to place them under the words which they illustrate, so as to avoid the necessity of any further reference, and it is hoped that the advantages of the present arrangement will be appreciated. It will be observed that an entirely new selection of illustrations has been made for this edition, many being taken from original drawings, and the remainder chiefly from works of high authority in their respective departments. For the artistic beauty of these cuts, the work is indebted to Mr. JOHN ANDREW, of Boston, who has a distinguished reputation as an engraver on wood. It will be remembered that only a partial selection could be made of objects to be illustrated. Even in illustrated works on Natural History, it is customary to represent only a limited number of objects; and, in a work like the present, a still smaller number of such illustrations could be admitted. The general aim has been to illustrate those objects of which a drawing would convey a better conception than a mere verbal description. Those who use the Dictionary will not fail to observe that, to many words which are not themselves illustrated, there are subjoined references to illustrations given in connection with other words; as, under *Withers*, it is said, "[See *Illust.* of *Horse.*]."

VIII. *The Vocabularies in the Appendix* have been reëdited, or expressly prepared for this edition by able scholars, as will appear from the full account of the Vocabularies themselves, and of the researches and aims of the authors in the special Introductions which accompany them. The first and most prominent, the "Vocabulary of the Names of Noted Fictitious Persons, Places, etc.," by Mr. Wheeler, is a novel and appropriate accompaniment of an English Dictionary. It is the first attempt of the kind, at least in our language, and is valuable for its interesting gleanings from history and biography, as well as for its explanations of many obscure allusions in the best and most popular writers. The remaining Vocabularies are all the products of original and laborious research, or are trustworthy compilations from the best sources.

IX. *The Pronunciation* of English words has been carefully attended to in this edition. The principles adopted are stated at length and fully illustrated in the article on the Principles of Pronunciation, which was originally prepared by Professor Goodrich, and has been elaborated by Mr. Wheeler, with suggestions from able scholars, who, as well as himself, have made a special study of English orthoepy and the science of phonology. A more thoroughly practical and satisfactory treatment of the subject, the Editor confidently believes, can not be found in the language. The "Synopsis of Words Differently Pronounced by Different Orthoëpists" will be found to be a comprehensive, practical, and fully trustworthy exhibition of the various modes of pronunciation given in the best English Dictionaries. The pronunciation of each word in the Dictionary is indicated by the marked or figured Key which is to be found at the bottom of the page. This Key has been remodeled and arranged with special reference to this edition, and contains some few characters additional to those of the Key previously used. The number of characters now employed is thought to be as large as is desirable. To attempt more is to seem to promise more than it is practicable to perform, and is, besides, open to the objection that a complex notation would not be readily understood.

X. *The Orthography.* In this department no change has been made in the principles adopted and clearly set forth in the Revised Edition of 1847, and so generally accepted by the American public. In a few classes of words the Dictionary recommends and follows the peculiar modes of spelling which Dr. Webster introduced for the sake of carrying out the acknowledged analogies of the language — modes of spelling, which, in every instance, had been previously suggested by distinguished English grammarians and writers on orthography, such as Lowth, Walker, etc., and the propriety of which has been recognized by Smart and other recent English lexicographers. But to remove every reasonable ground of complaint against the Dictionary in regard to this matter, an alternative orthography is now given in almost every case, the old style of spelling being subjoined to the reformed or new. In two or three instances it has been found that the forms introduced by Dr. Webster, or to which he lent his sanction, were based upon a mistaken etymology; and therefore these forms have been set aside, and the old spelling has been restored. Preceding this account are some Observations on the general subject of Orthography, with copious "Rules for Spelling Certain Classes of Words," prepared by Mr. Wright, followed by "A List of Words Spelled in Two or More Ways," compiled expressly for the present edition. These new features give this edition of the Dictionary a great superiority over the former editions.

In conclusion, the Editor desires to express his thanks to all the persons who have assisted in the preparation of the present edition, for the fidelity and perseverance with which they have discharged their duties. It is to their industry, scholarship, and zeal, that the peculiar excellences of this edition are chiefly to be ascribed. Though the Editor is more sensible of its deficiencies than any other person can be, yet he does not hesitate to commend it to the public for the improvements which are due to the thorough research and careful attention which have been bestowed by his associates in preparing it. To them the public owe a debt of grateful appreciation, which, he believes, will be cheerfully discharged.

NOAH PORTER.

A BRIEF HISTORY OF THE ENGLISH LANGUAGE.

By JAMES HADLEY, LL. D.,

PROFESSOR OF THE GREEK LANGUAGE AND LITERATURE IN YALE COLLEGE.

Revised by GEORGE LYMAN KITTREDGE, A. B.,

HARVARD UNIVERSITY.

LANGUAGES KINDRED TO THE ENGLISH.

§ 1. Anglo-Saxon, Teutonic, Indo-European. The English language is the descendant and representative of the Anglo-Saxon. It has lost very much of the inflection, and very many of the words, which belonged to the old language; and, on the other hand, it has borrowed words very largely, to the extent even of half its vocabulary, from other languages, especially the French and the Latin. Yet all the inflections that remain in it, and most of its formative endings, the pronouns and particles, and, in general, the words which are in most frequent and familiar use, have come to it from the Anglo-Saxon. With all its mixture of foreign elements, it is still a Teutonic language, like the German, Dutch, Swedish, Danish, and others. These, again, make one branch in that great family of languages, which, as it extends from India westward, and covers nearly the entire area of Europe, is called *Indo-European*. Among all families of kindred tongues, the Indo-European is preeminent, both for the perfection of its organic structure, and for the value of its literary monuments. The parent of the whole family, the one primitive Indo-European language, has left no such monument of itself, but its forms and roots may be made out, to a great extent, by the scientific comparison of the languages which are descended from it. The main branches of the Indo-European family are the following —

§ 2. I. The Indian The *Sanskrit* of the four Vedas, the sacred books of the Brahman religion, is more ancient than the common or classical Sanskrit Even the latter had ceased to be the language of common life as early as the third century before Christ. It was succeeded by the *Prakrit* dialects, one of which, the *Pali*, is the sacred language of the Buddhists in Ceylon and Farther India These, in their turn, were succeeded by the modern idioms of Northern Hindostan, — the *Bengali*, *Mahratt*, *Guserati*, and others. The *Hindoostanee* (or *Urdu*), formed in the camps and courts of the Mohammedan conquerors of India, is largely intermixed with Persian and Arabic. The widely scattered *Gypsies* speak, with great diversity of dialect, a language which is clearly of Indian stock

§ 3. II. The Iranian To this branch belong 1 The *Zend*, which is believed to have been the language of ancient Bactria, and is preserved in the Avesta, or sacred writings of the Parsees. 2 The *Old Persian*, which is seen in the cuneiform (or arrow-headed) inscriptions of Darius and Xerxes The modern Persian has lost nearly all the ancient inflection, and with the Mohammedan religion has adopted a multitude of words from the Arabic. Other languages belonging to this branch are those of the *Kurds*, the *Afghans*, and the *Ossetes* (in the Caucasus) The *Armenian* (ancient and modern), formerly regarded as belonging to the Iranian family, is now recognized as an independent branch of the Indo-European stock. The Indian and Iranian are often classed together as forming the Indo-Persian, or Aryan, branch of our family

§ 4. III. The Greek. Of its numerous dialects, the first to receive literary culture was the *Old Ionic*, or *Epic*, followed by the *Æolic*, the *Doric*, the *New Ionic*, and finally the *Attic*, which became at length, though with some change of form, the common language of literature and society It is represented now by the *Romaic*, or *Modern Greek*. The *Albanian*, spoken in a large part of modern Greece, is supposed to be a descendant of the ancient *Illyrian* It is not a near relative of the Greek, but is commonly accounted as a distinct branch of the Indo-European family Its position and relations, however, are still very obscure

§ 5. IV. The Italic This is often joined with the preceding, as the Greco-Italic, or Classical, branch, but this classification is unsound The Italic branch is, in many respects, not so nearly related to the Greek as to the Celtic The most important member of the Italic branch is the *Latin*. Closely akin to this were the other Italic languages — the *Oscan*, *Umbrian*, etc. — in Central Italy The modern descendants of the Latin are called the *Romance* languages They are the *Italian*, the *Spanish*, the *Portuguese*, the *Catalan* (eastern coast of Spain, Balearic Islands, etc, and the former county of Roussillon in Southern France), the *Provençal* (of Southern France, used in the Middle Ages as a literary language), and the *French* (originally the popular dialect of Northern France). All these contain a small proportion of Teutonic words, brought in by the barbarian conquerors of the Western Roman Empire But another Romance language — that of the *Wallachians*, the descendants of the Romanized Dacians — is largely intermixed with borrowed words, taken chiefly from the neighboring Slavonic tribes The term *Rhæto-Romanic* language is applied collectively to several Swiss dialects spoken in Tyrol, the Grisons, and Friaul

§ 6. V. The Celtic. This branch is divided by strongly marked differences into two sections: 1. The *Gaelic*, including the *Irish* (or native language of Ireland), the *Erse* (or Highland Scotch), and the *Manx* (the corrupt idiom of the Isle of Man) The last two are little more than dialects of the Irish 2. The *Britannic*, including the *Cymric*, or *Welsh* (the native language of Wales), the *Cornish* (which was spoken in Cornwall, but went out of use in the last century), and the *Armorican*, or *Bas-Breton* (still spoken in the French province of Brittany, the ancient Armorica) The oldest manuscript specimens of the Gaelic belong to the close of the eighth century, for the Cymric, the oldest which are at all copious are three or four centuries later.

§ 7. VI. The Slavonic. The earliest monument is the incomplete version of the Bible, made in the ninth century, by the Greek missionaries Cyril and Methodius, into the *Old Slavonic* (often called *Ecclesiastical Slavonic*, or *Old Bulgarian*), the idiom spoken by the Bulgarians of that time. This widely diffused class of languages divides itself into two principal sections 1. The *South-eastern Slavonic*, including the *Russian*, the *Ruthenian* (in Galicia), the *Bulgarian*, and the three *Illyrian* idioms, *Servian*, *Croatian*, and *Slovenic*. 2. The *Western Slavonic*, including the *Polish*, the *Bohemian* (with the *Moravian* and *Slovack* dialects), the *Lusatian* or *Wendish*, and the extinct *Polabian*.

§ 8. VII. The Baltic. The most important language of this family is the *Lithuanian*, which has no monuments older than the middle of the sixteenth century, but which has preserved in a surprising degree the ancient inflection and structure. To the same stock belong the *Lettish* of Courland and Livonia, which is much less ancient in its form, and the *Old Prussian*, which was once spoken on the coast of the Baltic east of the Vistula, but became extinct in the seventeenth century. The connection between this and the preceding branch is such that they are often classed together as the Letto-Slavic languages

§ 9. VIII. The Teutonic Here again the earliest monument is a version of the Bible, made by Ulfilas, an Arian bishop of the fourth century, into his native *Gothic* (or *Mæso-Gothic*), the language spoken at that time by the Goths on the Lower Danube. This work is preserved only in fragments, but these are of considerable extent, and are of inestimable value to the philologist The Teutonic languages are distinguished as, —

§ 10. 1. The *Gothic*, almost the only monument of which is the Bible translation of Ulfilas. Some remarkable agreements between Gothic and Scandinavian have caused many scholars to include these two languages in a single class, the *East Germanic*

§ 11. 2 The *Norse*, or *Scandinavian* The *Old Norse* is also called *Old Icelandic*, as most of its abundant literature (Eddas, Sagas, etc) was composed in Iceland. The oldest manuscripts in which it is preserved are of the twelfth century; but many of its productions are of earlier origin, going back even to the heathen times of Scandinavia. The modern *Icelandic* has adhered with remarkable fidelity to the forms of the ancient language But the modern idioms of the Scandinavian mainland, the *Swedish*, the *Danish*, and the *Norwegian*, have undergone extensive changes

§ 12. 3 The *West Germanic*, conveniently divided into *High Germanic* and *Low Germanic*

I The *High Germanic* is the language of Upper or Southern Germany The *Old High German* is seen in Otfrid's Krist, Notker's Translation of the Psalms, and other monuments, most of them in verse, from the eighth century to the end of the eleventh The *Middle High German*, from the twelfth to the fifteenth century, has a rich poetical literature, including the Nibelungen Nôt with its attendant epics, and the lyric poetry of the Minnesinger The *New High German* is the language of Luther's Bible version and of all German literature since the Reformation

II The *Low Germanic*, spoken in Northern Germany and the Netherlands Here belong (*a*) The *Frisic*, which was once spoken along the whole northern coast of Germany, from the Elbe westward Its early monuments consist almost wholly of laws, beginning with the fourteenth century. For a long time it has existed only as a popular idiom, and is now confined to a few small and scattered localities (*b*) The *Anglo-Saxon* (sometimes called simply *Saxon*), which in the fifth and sixth centuries was transplanted from Northeastern Germany to Britain, and has had its subsequent development and history in that island (*c*) The *Old Saxon*, which was spoken in Northern Germany between the Rhine and the Elbe, south of the narrow sea-coast region, which was occupied by the Frisic. It is known almost solely from the Hêliand (*i. e.*, Savior), a metrical narration of the gospel history, preserved in manuscripts of the ninth century. (*d*) The *Old Frankish*, the language of the Netherlands in the same period, was closely allied to the *Old Saxon*. Its modern representatives are (1) the *Dutch*, or *Low Dutch*, spoken in Holland, and used as a literary language since the last part of the thirteenth century, and (2) the *Flemish*, spoken in Flanders, and often erroneously regarded as a dialect of the Dutch. (*e*) The *Low German*, strictly so called (or *Plattdeutsch*), the idiom of the common people in Northern Germany, is the lineal descendant of the Old Saxon In the fourteenth and fifteenth centuries, it was used as a literary language; but political circumstances, giving ascendency to the High German, have reduced it to the inferior position of a popular dialect

§ 13. Languages not kindred to the English. The Indo-European family has no isolated domain, but comes in contact with various other families of languages. It is bounded along its northern frontier by the *Tartaric* (or *Tataric*) family (called also the *Turanian*, or the *Altaic*), which includes the numerous and widely different languages of the *Mantchoos*, the *Mongols*, the *Turks* (in Asia and Europe), the *Magyars* (in Hungary), the *Finns*, and a multitude of other tribes. To the southeast it touches on the so-called *Dravidian* family, consisting of the *Tamil* and its sister idioms in Ceylon and Southern India In Southwestern Asia it is in contact with a more remarkable family, — the *Semitic*, — including the *Hebrew*, *Syriac*, *Arabic*, and *Ethiopic*, with their ancient and important literatures. Even in Southwestern Europe, it is doubtful whether the ancient *Etruscan* belonged to our family It is perfectly clear

that the ancient *Iberian* did not belong to it, which was once the prevailing language of the Spanish peninsula, and which still lives, on the two sides of the Pyrenees, in the strange language called *Basque* (*Biscayan*, or *Euscarra*). Whether the Indo-European has a primitive connection with any of the adjacent families, is a question which has not been, and perhaps never will be, decided by philological evidence. At all events, it is certain that between Welsh and Sanskrit, distant as they are in space and time, there is an infinitely closer connection than between the neighboring pairs of Russian and Finnish, German and Hungarian, or Greek and Hebrew. It is true that some languages of our family have borrowed particular words from languages of other families. The English, for example, has taken from the Hebrew such words as *shekel*, *cherub*, *seraph*, *jubilee*, *pharisee*, *cabala*, etc.; and from some of them has formed derivatives, such as *seraphic*, *jubilant*, *pharisaical*, *pharisaism*, *cabalist*, *cabalistical*, etc. But this borrowing can only occur where there are historical conditions that favor it: even then it has its limits and its distinctive marks, and must not be confounded with a radical affinity between two languages. All etymologizing which assumes or implies a radical affinity between English and Hebrew, English and Finnish, or the like, is, in the present state of philology, unscientific and illusory.

GENERAL FEATURES OF THE TEUTONIC LANGUAGES, PARTICULARLY THE ANGLO-SAXON.

§ 14. Progression of Mutes. In examining the sounds of the Teutonic languages we find that the primitive Indo-European mutes have undergone a remarkable series of changes. The smooth mutes (*tenues*) of the parent tongue, *p*, *t*, *k* (preserved as such in Greek and Latin), appear in Gothic as *f*, *þ* (*th*), *h*; the primitive middle mutes (*mediae*), *b*, *d*, *g*, as *p*, *t*, *k*; and the primitive medial aspirates (*mediae aspiratae*), *bh*, *dh*, *gh* (in Greek φ, θ, χ), as *f*, *d*, *g*. This process, known as the Progression of Mutes, is often stated thus: the primitive smooth mutes pass in Gothic into the corresponding aspirates, the primitive middle mutes into the corresponding smooth mutes, and the primitive medial aspirates into the corresponding middle mutes. But this form of statement, though convenient as an aid to memory, is open to grave objections from a scientific point of view for example, the letters *b*, *d*, *g*, in Gothic, do not always stand for the sounds of the middle mutes, but in certain positions represent spirants, and Gothic *f*, *þ*, *h*, are spirants, not aspirates. In the Progression of Mutes the other Teutonic languages agree in general with the Gothic; but the Old High German has gone one step farther, changing the Gothic *b*, *d*, *g*, into *p*, *t*, *k*; the Gothic *p*, *t*, *k*, into *f*, *z* (for *th*), *ch*; and the Gothic *þ* into *d*. The change from *b*, *g*, to *p*, *k*, however, is unknown to the New High German. In Old High German it was confined to certain dialects, and it had begun to lose ground before the beginning of the Middle High German period. To the rules thus roughly given, there are numerous apparent exceptions (thus after *s*, the primitive smooth mutes remain unchanged), but all of these can be shown to depend on special laws. The following examples will serve as illustrations of the Progression of Mutes: —

Greek.	Latin	Gothic.	Eng.	O. H. Ger.	N. H. Ger.
πούς (for ποδ-ς)	*pes* (for *ped-s*)	*fōtus*	*foot*	*fuoz*	*fuss*

§ 15. Variation of Vowels. It is a thing of familiar occurrence in all the Teutonic languages, that the same root appears with a variety of vowel sounds, as in *sing*, *sang*, *sung*, *song*; *bind*, *bound*, *band*, *bond*. Similar variations of vowel sound are met with in other languages. What is peculiar to the Teutonic is the frequency and regularity with which they are used as a means for the inflection and formation of words. They appear thus most frequently and regularly in the earliest Teutonic idioms, many words which had them in the Anglo-Saxon have lost them in the English. Different from these variations of vowel is that attenuation, or change from a more open vowel sound to a closer, which we see in *man*, *men*, *foot*, *feet*, *mouse*, *mice*. This change, which is unknown to the Gothic, has arisen from the influence of a close vowel (*i*) belonging to an inflection ending, which has dropped off from the English *men*, *feet*, *mice*, but which is still heard, in a modified form, in the German plurals, *mann-er*, *füss-e*, *maus-e*.

§ 16. Numbers. The Indo-European inflection distinguished three numbers, *singular*, *plural*, and *dual*. In the Teutonic languages, the dual form of the noun has wholly disappeared: that of the verb appears only in the Gothic, and there only in the first and second persons. The pronouns of the same persons show a dual form, not only in the Gothic, but also in the Anglo-Saxon: thus AS *wit*, we two, *unc*, us two, *git*, ye two, *inc*, you two, but in the plural *wé*, *úsˇ*, *gé* (ye), *ówˇ* (you), as in English.

§ 17. Genders. The Indo-European system of gender seems to have commenced with some differences of inflection between the names of personal and those of impersonal objects. Among the first, certain forms of inflection were afterward appropriated to the names of female persons. The result was a threefold system of gender, corresponding to the real distinctions of sex. But its character was modified, almost from the outset, in two different ways: first, many objects which are without sex were thought of as having in their attributes an analogy to male or female persons, and accordingly received masculine or feminine inflection; and second, in some cases, objects which have sex were thought of without special reference to sex, and accordingly received neuter inflection. Thus, the system of grammatical gender assumed to a great extent a fictitious, and even an arbitrary, character. This system had become fully developed before the separation of the Indo-European family; and it is found, essentially unchanged, not only in the Gothic and the Anglo-Saxon, but even in the modern German. In the English, on the contrary, it has almost entirely disappeared: the same forms of the article, the adjective, and even of the pronoun, are used for all kinds of objects. The only distinction is in the personal pronoun of the third person, where in the singular we use special forms (*he*, *she*; *his*, *her*; *him*, *her*) in reference to male and female objects. But in the Anglo-Saxon, *hé* is used in referring to *sé mónaˇ*, the moon, *sé stánˇ*, the stone, as well as *sé cyningˇ*, the king, *héo* (she), in referring to *séo sunneˇ*, the sun, *séo spræcˇ*, the speech, as well as *séo sweostorˇ*, the sister; *hit* (it), in referring to *þæt héafodˇ*, the head, but also to *þæt bearnˇ*, the child, and even *þæt wífˇ*, the woman, wife.

§ 18. Cases. The Indo-European had eight cases; the *nominative*, for the subject of a sentence; the *accusative*, for the direct object; the *dative*, for the indirect object (*to* or *for* which something is done); the *genitive*, or *of*-case; the *ablative*, or *from*-case; the *instrumental*, or *with*-case (denoting either association or instrument); the *locative*, or *in*-case; and, finally, the *vocative*, or interjectional case, which does not enter into the construction of the sentence. Of these, the ablative and locative are nowhere found in the Teutonic languages. The vocative, which is not wanting in the Gothic, is scarcely known to the Anglo-Saxon. The instrumental, which has nearly disappeared in the Gothic, is seen in the inflection of Anglo-Saxon adjectives and demonstratives. The remaining four cases, the nominative, accusative, dative, and genitive, are common to all the older Teutonic languages, and are still distinguished in the modern German. The English distinguishes nominative and accusative in the personal pronouns only; in substantives, it has the genitive (though in the plural commonly without a distinct form), but confines it almost wholly to the possessive relation.

§ 19. Declensions. The Anglo-Saxon, like the other Teutonic languages, has two schemes of noun inflection, which may be termed the *Vowel Declension* and the *N Declension* they are often called *strong* and *weak* declensions. The few Anglo-Saxon substantives which do not agree with either of these schemes may be treated as anomalous. But different from both is the *Pronominal Declension*, seen in the demonstrative and most other pronouns. One of the most remarkable peculiarities of the Teutonic is the fact that every adjective is inflected in two ways: it follows the pronominal declension when its substantive is *indefinite*; but if the substantive is *definite*, as when it is connected with the definite article, or with a demonstrative or possessive pronoun, the adjective follows the N declension. Thus the Anglo-Saxon has *wís cyning*, a wise king, genitive *wises cyninges*, dative *wísum cyninge*; *gód nama*, a good name, genitive *gódes naman*, dative *gódum naman*, but *sé wísa cyning*, the wise king, genitive *þæs wísan cyninges*, dative *þám wísan cyninge*; *sé góda nama*, the good name, genitive *þæs gódan naman*, dative *þám gódan naman*. This distinction of the definite and indefinite adjective is preserved in modern German, but is wholly lost in modern English. In substantives, the English still shows a trace of the N declension, in a few plurals, like *oxen*, *children*, *brethren*, *kine*; though all of these, except *oxen*, are Old English blunders, the *n* being misapplied to words that did not have it in the Anglo-Saxon. The familiar archaic form *eyne* (eyes) shows a genuine Anglo-Saxon plural in *n* (*éagan*).

§ 20. Voices. The Teutonic verb, when compared with the Indo-European, shows extensive losses. It has but one voice, the *active*, having given up the *middle* (or reflexive) voice and the *passive*. In the Gothic, indeed, we still find the ancient middle, formed as in the Greek, and used generally in a passive sense; it is confined, however, to the present tense, and shows by other signs that it was beginning to disappear from the language. The Anglo-Saxon has preserved a single relic of the old medio-passive, — the form *hátte* (Goth. *haitada*, is called, O. Eng. *hight*). In the past tense of the Gothic, and in both tenses of the other old Germanic idioms, the place of a passive verb was supplied by using the passive participle, sometimes with the verb which means *to be* (Goth. *wisan*, AS. *wesan*, or *béon*, etc.), and sometimes with the verb which means *to become* (Goth. *waírþan*, AS. *weorðan*, Old Eng *worth* in *woe worth the day*) In all the modern Germanic idioms, except the English, only the latter verb (Ger *werden*, Dutch *worden*, etc) is used to make up the passive. The English alone, doubtless under French influence, has fixed upon the verb *to be* for this purpose. The Danish and Swedish have a passive made by adding *s* to the forms of the active But for this *s* the Icelandic has *st*, and in the earliest manuscripts *sk*, which is plainly the reflexive pronoun *sik* (self, selves) shortened and added to the active verb. Here, as in many other languages, the passive was originally reflexive.

§ 21. Moods and Tenses. The Teutonic verb has three finite moods, the *indicative*, the *subjunctive* (Greek *optative*, Sanskrit *potential*), and the *imperative*: the second of these has, to a great extent, disappeared in modern English. It has also an infinitive, and a participle active and passive, which are essentially verbal nouns. Of the primitive moods, it wants only the one which is represented by the Greek *subjunctive* Of tenses, it has lost the primitive *imperfect*, *future*, and *aorist*, retaining only the *present* and the *perfect*. The *reduplication* of the perfect (seen in Greek λέ-λυ-κα, Latin *tu-tud-i*) is preserved by the Gothic in a few verbs, as *haíhald*, held; in the other idioms we find little more than traces of its former existence.

§ 22. Persons and Numbers. There is good reason to believe that the personal endings (except perhaps that of the third person plural) were in their origin pronouns, appended to the verb, and denoting its subject. The Gothic, in general, distinguishes the three persons of the singular and those of the plural by as many different endings The Anglo-Saxon confounds the three persons in the plural of the indicative, and in both numbers of the subjunctive; but still distinguishes between the singular and the plural. Even this last distinction is, to a great extent, lost in modern English. The Teutonic imperative has only a second person.

§ 23. Verbs of Primary and Secondary Inflection. The Teutonic verbs divide themselves into two well-marked classes, which may be called verbs of *primary*, and verbs of *secondary*, inflection: they are often called verbs of *strong* and of *weak* inflection. To the first class belong words like *fall*, *fell*; *know*, *knew*; *swear*, *swore*; *drive*, *drove*; *choose*, *chose*; *lie*, *lay*; *come*, *came*; *sing*, *sang*, etc. In these, the past tense adds nothing, except personal endings, after the root or stem of the verb. They are further characterized by that variation of the radical vowel (*internal inflection*), which has been already noticed as a striking peculiarity of the Teutonic. To the second class belong words like *kill*, *killed*; *lie*, *lied*, *lay*, *laid*; *lead*, *led* (for *leaded*), *leave*, *left* (for *leaved*); *have*, *had* (for *haved*); *make*, *made* (for *maked*); etc. In these, the past tense adds *d* (in High German, *t*) to the root or stem. Only a few of them have also a change of radical vowel, as *sell*, *sold*, *bring*, *brought*, etc. In most forms of the Gothic perfect, this *d* is doubled, as in *lag-i-dēdum*, we laid, *lag-i-dēduþ*, ye laid, etc. This has been thought to be the reduplicated perfect of a verb corresponding to our *do*; thus *lag-i-dēdum* = lay-did-we, we made a laying; but there are great difficulties in the way of such an explanation. In Gothic, this class embraces the derivative words, while nearly all primitive verbs have the inflection of the first class. But the tendency in all Teutonic languages has been to increase the second class at the expense of the first. Many Anglo-Saxon verbs of the first class belong in Old English to the second: thus, AS. *murnan*, to mourn, pf. *mearn*, but O. Eng. *morned*; *bacan*, to bake, pf. *bóc*, O. Eng. *baked* and *bok*; *lēosan*, to lose, pf. *léas*, O. Eng. *loste*. And many Old English verbs of the first class belong in modern English to the second: thus, O. Eng. *sew* (pf. of *sow*), now *sowed*; O. Eng. *glod* (pf. of *glide*), now *glided*; O. Eng. *gnow* (pf. of *gnaw*), now *gnawed*. Very rarely the

change has been in the opposite direction: thus, Eng. *wore* (pf. of *wear*), AS. *weredе* (O. Eng. *wered*). The result of these changes is, that in modern English, the verbs of the first class, when compared with those of the second, have the appearance of anomalous and capricious exceptions to a general law of inflection.

THE ANGLO-SAXON AS A LITERARY LANGUAGE.

§ 24. Name. The emigrants from Germany, who invaded Britain in the fifth and sixth centuries, and after long struggles conquered most of the island, appear to have come in great part from the districts now called Sleswick and Holstein, on the eastern shores of the North Sea. The Angles, who seem to have been the most numerous portion, established themselves in the east and north of Britain, but left the Scottish Highlands to their Gaelic population. The Saxons occupied the south and west, but left Wales and Cornwall to their Cymric population. A third fraction, of far inferior numbers, the Jutes, took possession of Kent in the southeast of England. There is reason to believe that there were differences of dialect among these settlers; and, particularly, that the idiom of the Angles varied in some degree from that of the Saxons; but it can not well be doubted that they all spoke substantially the same language. This common language bears a close resemblance to the Friesic and to the Old Saxon, holding in some respects an intermediate position between them. In its oldest monuments (which, however, are about three hundred years later than the Anglo-Saxon conquest) four dialects are distinguishable, the two Anglian dialects (the *Northumbrian*, and the *Mercian* or *Midland*), the *Kentish*, and the *Saxon*. Of these the Saxon has left a considerable literature (chiefly in the West Saxon dialect), but the other three have come down to us in scanty remnants. The first of the four to receive literary cultivation was the Northumbrian, which developed a considerable literature; but with the transference of power from the north to the south, the Saxon (especially the West Saxon, or language of Wessex) became the literary dialect, so that the old Northumbrian poems have reached us only in a Saxon dress. The term *English* (*Englisc*, belonging to the Angles) was, however, retained by the Saxons as a designation for their own language as well as that of their more northern countrymen. The term *Anglo-Saxon*, originally political in its application (and meaning perhaps not *Angle and Saxon*, but *English-Saxon*) was first applied to the language by modern scholars. Though strongly objected to in some quarters, this term is too convenient to be lightly rejected in favor of the ambiguous name *Old English*. In this sketch Anglo-Saxon words will be given in their West Saxon form unless the contrary is mentioned.

§ 25. Alliterative Verse. There was no written Anglo-Saxon literature until after the conversion of the people to Christianity. The earliest productions were poetical, and, like all Anglo-Saxon poetry, indeed like all early Teutonic poetry, they are alliterative. The verses are not confined to a uniform number of syllables, nor do they have final rhyme. But in each line several prominent words, two, three, or four, either all begin with the same consonant, or all begin with vowels, which are not required to be the same. In the most common arrangement, there are three alliterative words in the line, two in the first half-verse, and one in the second. A word which has an unaccented prefix is treated as if the prefix were no part of it. Every line falls into two half-verses, each of which has two full accents. The measure admits of great variety, but recent investigations indicate that it is controlled by definite laws and largely dependent on quantity. To illustrate the description, we subjoin the so-called Hymn of Cædmon as given in a West-Saxon form by King Alfred in his translation of Bede. We divide each line into its two half-verses, and mark the initial letter of the alliterative words. In the annexed translation, other objects are sacrificed in order to represent the alliteration.

§ 26. Works of Poetry and Prose. Among the longer Anglo-Saxon poems, the most remarkable is the epic called Béowulf, from the name of its Danish hero. It is preserved in a manuscript of the tenth century, but is certainly much more ancient in its origin. In substance, it must have come down from heathen times, though the form in which we have it shows the work of Christian hands. In the same manuscript is preserved a fragment of 350 lines belonging to an epic poem on the history of Judith. This is one of the best of the Anglo-Saxon poems. Its date is uncertain (perhaps the ninth century). We have also a long series of Scripture narratives (Genesis, Exodus, Daniel) in Anglo-Saxon verse: these, too, are found in a manuscript of the tenth century. They have been generally regarded as productions of Cædmon, a monk who lived in the last half of the seventh. This theory, however, is now universally abandoned. In their present shape the poems are later than the time of Cædmon, and certainly not all the work of one author. Professor Eduard Sievers has shown good grounds for believing that much of the Genesis is translated from a lost Old Saxon original. A manuscript of the eleventh century contains the last two thirds of a metrical version of the Psalms, which, though considerably older than the manuscript, is certainly not the work of Cædmon's contemporary Aldhelm of Malmesbury. To Cynewulf, by many supposed to be a Northumbrian poet of the eighth century, are ascribed with certainty three long poems, Christ, Juliana (a life of the saint of that name), and Elene (an account of the discovery of the cross), as well as the Fates of the Apostles and a collection of metrical riddles. Among other poems with more or less probability ascribed to the same author may be mentioned Lives of St. Andrew and St. Guthlac, the Phœnix, and the Dream of the Rood. Of uncertain authorship are several interesting short poems, the Wanderer, the Seafarer, the Battle of Maldon, Athelstan's Victory at Brunanburh, and the very peculiar and artificial Rhyming Song. The famous Exeter manuscript of the eleventh century contains most of the poems ascribed to Cynewulf and several known not to be his. In prose, besides versions of different parts of the Bible, the most important works are the translations made from the Latin by King Alfred in the ninth century (including Gregory's Pastoral Care, the History of Orosius, the Ecclesiastical History of Bede, and Boethius on the Consolations of Philosophy); the Homilies of Ælfric, who was Abbot of Egnesham (Ensham) in the earlier part of the eleventh century; the Homilies of Wulfstan, who was Archbishop of York from 1002 to 1023; and the Saxon Chronicle, in which the principal events of Anglo-Saxon times are recorded in the form of dry and meager annals, by several successive writers, the last of whom wrote about a century after the Norman conquest.

An excellent bibliographical account of the literature of the Anglo-Saxon period is Wülker's *Grundriss zur Geschichte der angelsachsischen Litteratur*, Leipzig, 1885.

INFLUENCE OF OTHER LANGUAGES ON THE ANGLO-SAXON.

§ 27. The Celtic. The Saxons and Angles, when they entered Britain, were brought into contact with a Celtic-speaking population. It is true that the Latin had been spoken by the dominant people in England during more than three centuries of Roman occupation. But it seems not to have established itself, as it did in Gaul and Spain, so as to supplant the native language of the country. It had rather the position which was afterward held on the same ground by its own child, the French, for more than two centuries after the Norman conquest. It was spoken by the ruling caste, while the mass of the people adhered to their own mother tongue, though they naturally received into it, as time passed on, a considerable number of words learned from their rulers. In Wales, which has retained the same population from Roman times, the vernacular idiom is not of Latin origin, nor is it very largely intermixed with Latin: it is true and genuine Celtic. The probability is, that the great body of those whose possessions passed into Anglo-Saxon hands spoke substantially the same language. This being so, it would not have seemed strange if the idiom of the conquered people had acted on that of the conquerors, so as to introduce a large Celtic element into Anglo-Saxon and English. But the fact is quite the contrary. The Celtic words in English are altogether few in number: most of them — as *bard*, *druid*, *crowd* (a fiddle), etc. — belong to objects which are specially Celtic, and a large part — including nearly all those of Gaelic origin, as *brogue*, *clan*, *whisky*, etc. — are of recent introduction. It should seem that in the slow and gradual progress of the Saxon conquests, the native British fell back from point to point before the invaders; or, if a part remained in their old homes, they were too few to maintain their old language, and had to exchange it for the Saxon; while the independent Britons and the Saxons, engaged in constant hostilities, were cut off from that free and peaceful intercourse which might have left a marked impress on the languages of both. There have been, indeed, etymologists who regarded a large number of English words as borrowed from the primitive British. But in many of the cases brought forward, there is no real connection between the words compared. Thus AS. *cuð*, known (seen in Eng *un-couth*), has nothing to do with Welsh *gwydd*, knowledge, *gwyddi* stands, by Welsh phonetic change, for earlier *vid* which corresponds to Lat. *vid-eo*, Eng *wit* (as verb, to know), while *cuð* is identical with Ger. *kund*, and comes from the root seen in our *ken* and *know*. In many other cases, there is a real connection, but no borrowing, the words having come down both in the Teutonic and the Celtic from the common Indo-European stock. Thus *barrow*, which has been identified with W. *berfa*, is really derived from the root of the verb *to bear*, Goth. *bairan*, Lat. *ferre*, while *berfa*, if not taken from the English, was formed on Celtic ground from the same root, as seen in Ir *beirim*. For in many cases, when borrowing has occurred, it has clearly been in the opposite direction, by the Celtic from the English, or from the French or the Latin. Thus the English *solder* and *locker* do not come from the Welsh *sawduriaw* and *llogell*, but have other satisfactory etymologies, while *sawduriaw* is plainly taken from the English, and *llogell* (i. e., *locel*) is simply the Latin *loculus*. There remain, however, a small number of words — such as *basket*, *glen*, *lad*, *dun* (color), etc — in which an early borrowing from the Welsh is either certain or probable. But the words *bran*, *piece*, *quay*, and a few others like them, if they are really of Celtic origin, have not come to us directly from the Celtic, but have passed from a Celtic source into the Romance languages, and from thence into the English.

§ 28. The Latin. The introduction of Christianity among the Anglo-Saxons, at the opening of the seventh century, brought with it the study of the Latin. The cultivation of learning and letters belonged almost exclusively to ecclesiastics, with whom Latin was the professional language. Hence a number of Latin or Latinized Greek words, many of them words connected with church or religion, passed into the Anglo-Saxon, thus: —

Lat.	*diabolus*	AS. *dīofol*	Eng. *devil*
	presbyter	*prēost*	*priest*
	episcopus	*biscop*	*bishop*
	monasterium	*mynster*	*minster*
	clericus	*cleric*, *clere*	*clerk*
	prædicare	*predician*	(*preach*)
Gr.	*κυριακή*, or *κυριακόν*	*cyrice*	*church* (*kirk*, Scotch)
	ἐλεημοσυνη	*ælmesse*	*alms*
Lat.	*pondo*	*pund*	*pound*
	moneta	*mynet* (money)	*mint*

The names of months were also borrowed from the Latin. It is worthy of notice, that, while *minster* and *mint* have come to us through the Anglo-Saxon, we have the same Latin words by more recent importation in *monastery* and *money*, which come through the French *monastère* and *monnaie*. The number of Latin words that made their way into the language before the end of the Anglo-Saxon period is very considerable. Professor Skeat gives a list of upwards of one hundred and forty. A very few of these were known to the Anglo-Saxons before their conversion to Christianity, either from their having become a part of the common Teutonic speech, or from their having been adopted from the conquered Britons (such are *strēt*, street, from *strāta* [*via*], a paved road; *mīl*, a mile, Latin *mille* [*passus*], a thousand paces).

§ 29. The Scandinavian. In the year 827, Egbert, king of the West Saxons, became the acknowledged lord of all the separate fractions into which Anglo-Saxon England had before been divided. But the united kingdom was destined to suffer severely from a cause which had begun its work with the opening of that century. Piratical rovers from the regions about the Baltic were at this period the scourge and terror of Europe. These Scandinavians — or Danes, as the Saxons named them all, whether coming from Denmark or not — infested the whole eastern coast of England, not only making occasional descents, but conquering large districts, and forming permanent settlements. Alfred the Great, though he succeeded in checking their progress and in forcing them to acknowledge his authority, allowed them to remain under their own laws in this part of England, which was thence called Danelagh (Dane-law). Under his weak successors, the Danes resumed their conquering progress, and at last became masters of the whole country. The Danish kings, Sweyn, Canute, and Hardicanute, held the English throne from 1013 to 1042. Yet the Danes do not appear to have settled in large numbers, except in the eastern part of the island. A trace of their existence here is still seen in Ashby, Rugby, Whitby, and many other names of places with the same ending, for *-by* is the Icelandic *býr*, Swedish *by*, Danish *by*, a town, village. There is no evidence that the Danes of England sought to perpetuate or to extend the use of their own language. Even under Danish kings, the Anglo-Saxon continued to be used in public acts and laws. The truth appears to be, that in England, as well as in Normandy, the Scandinavian settlers did not long retain their mother tongue, but gave it up for the more cultivated idiom of the people among whom they settled. At the same time, they did not fail to communicate some of their own words to the new speech of their adoption. The extent of the influence thus exerted by the Danes upon our language, it is very difficult to determine. English words which are found in the Scandinavian idioms, and are not found in the earlier Anglo-Saxon or other Low Germanic idioms, we may naturally suspect to have come in by this channel. But the inquiry is subject to great uncertainties. The existing monuments of the early Anglo-Saxon are evidently far from showing its complete stock of words, and the other old monuments of Low Germanic idioms are by no means copious enough to supply the deficiency. It is certain, however, that the Danish influence has been greatly overrated by those who have ascribed to it any considerable fraction of the English vocabulary. To this influence we may trace the verb *call* (Icelandic *kalla*), which seems not to occur in Anglo-Saxon till 993 (*ceallsan*) and for which the earlier documents use *clypian*. So perhaps the adjective *same*, for though the Anglo-Saxon has the word as an adverb, it always uses *ylc* for the adjective (compare Scotch *of that ilk*, i. e., of the same, of a place bearing the same name as a person) Many other words (as *screech*, *grime*, *bow* of a ship), though doubtless introduced at a very early time, are not found in our monuments till after the Norman conquest, that is, till after the close of the Anglo-Saxon period.

§ 30. The Norman-French. The Normans (or North-men) were a body of Scandinavian adventurers, who, while their countrymen, the Danes, were making conquests in England, succeeded in establishing themselves on the opposite coast of France. In 912, King Charles the Simple ceded to Duke Rollo and his Norman followers the province which took from them its name of Normandy. Here they soon ceased to speak their own language, adopting that which was spoken by the native population. If in this they took the same course with their Danish kinsmen in England, the change was a much greater one in the case of the Normans, for the Scandinavian differed far less from the Anglo-Saxon, another member of the same Teutonic family, than from the French, which was a daughter of the Latin. The dialect which thus grew up in Normandy differed in many particulars from the other dialects of the French language, and is commonly known as Norman-French The influence of the Norman-French began to be felt in England, even before the Norman conquest of the country. It seems to have been much used at the court of Edward the Confessor, who followed the Danish dynasty, and reigned from 1042 to 1065. This prince, though of Saxon birth, had spent his youth in Normandy. When he became king of England, he surrounded himself with Normans, exciting thus the jealousy of his native subjects, who in 1052 constrained him to banish the obnoxious foreigners. After his death, Duke William of Normandy laid claim to the English crown, and the hard-fought battle of Hastings, in 1066, in which Harold, the Saxon king, was slain, and his army totally defeated, established the claim of the Conqueror. This event, which has affected the whole subsequent history of England, has had the most important influence on its language. It was not, indeed, the intention of William to suppress the language of his new subjects. He is said to have made an attempt, though an unsuccessful one, to acquire it himself. But the political and social conditions which followed the conquest were extremely unfavorable to the language of the conquered people. Their obstinate resistance and repeated insurrections led the Conqueror to treat them with the utmost severity. They were shut out from offices of state; they were removed from ecclesiastical positions, they were deprived of lands, and reduced to poverty and wretchedness. The court, the nobility, the landed gentry, the clergy, the army, were all Norman. The Anglo-Saxon language was banished from these circles, and the French took its place. The instruction of the schools was given in French alone. There was nothing to stimulate, there was everything to discourage, the cultivation of the native language.

TRANSITION FROM ANGLO-SAXON TO MODERN ENGLISH.

§ 31. Periods. For five centuries after the Norman conquest, the language of England was in a constant and rapid process of change. During the first of these centuries, we may believe that it had not yet departed very widely from the earlier type. The last monument of the old language is the concluding part of the Saxon Chronicle, in which the history is brought down to the death of King Stephen in 1154. We can not, however, suppose that the writer of that part has used the idiom which was spoken by the people in his own time. The change by which, in grammatical endings, the older vowels *a*, *o*, *u*, have all passed into *e*, is found in High German from the beginning of the twelfth century: it began even earlier in our language. In the second century after the conquest, the old inflection, with the change just described, is still for the most part retained, but in a state of much confusion and corruption: this is called the Semi-Saxon period. In the third century, a large part of the old inflection has disappeared, while no great proportion of French words has yet come into the language: this is called the Old English period In the fourth and fifth centuries, we find a vast body of French words mixed with those of native stock, while the old inflection is brought down to that minimum which remains in the language at this day: this is called the Middle English period. It must be remembered that the process of change was gradual and incessant: the language did not remain fixed for a time, and then on a sudden leap to a new position. Hence the periods here distinguished are in some degree arbitrary, at least as regards their boundaries; and writers may be found of the same period who are separated from each other by marked differences of language

§ 32. Changes. It is implied in the foregoing statements that the changes in our language, consequent on the Norman occupation of England, were mainly of two kinds: 1. The loss of the Anglo-Saxon inflection; and, 2. The introduction of new words from the French. The latter change did not go on to any great extent until more than two centuries after the conquest; yet no one can doubt that it was caused by that event. But in regard to the earlier change, — the loss of the ancient inflection, — it is maintained by some writers that this was in no degree occasioned by the coming of the Normans. A similar change in the modern languages of Latin origin is often explained from the difficulty which the barbarian conquerors of the Roman empire must have found in mastering the complex system of Latin inflection. The explanation, whether satisfactory or not for the Romance languages, can not be applied to ours; for the change in question had nearly run its course before any large part of the Normans had begun to speak English. It is true also that changes of the same nature have been made, and not very far from the same time, in the other Germanic idioms in each of them, the one vowel *e* has taken the place of other vowels in grammatical endings, and in each a part of the endings have been confounded with one another, or have disappeared altogether. What is peculiar to the English is the rapidity of this movement and the extent to which it was carried. No written language of Germanic stock, no unwritten dialect of any province or people, shows, even at the present day, a loss of inflection equal to what appears in the English of five hundred years ago. This striking peculiarity in the effect compels us to seek for a peculiar cause, and no cause can be found so likely to produce it, as the long subjection of the English-speaking people to a people of different race and language. The tendencies and influences which would in any case have given a new form to the English, as they have to its sister idioms, derived additional force and greater quickness of operation from the depressed circumstances of the English people. The language shared in the suffering and degradation which fell on those who spoke it. Used only by the lower classes, and regarded with contempt by the higher, shut out from the schools, from cultivated society, and, with few exceptions from works of literature, it was left without standards of correctness; it was deprived of those conservative influences which might otherwise have retarded the progress of change and disintegration.

§ 33. Semi-Saxon Period, 1150–1250. The Anglo-Saxon inflection is still in a great measure retained, but with *e* instead of other vowels in the endings, and with much confusion and irregularity of use. This period is represented chiefly by four works: 1. The Brut of Layamon (Lazamon), a long narrative poem, which recites the early fabulous history of Britain. It is a free translation, or, more truly, a working over, of the Roman de Brut, composed in French by Wace, and finished in 1155. Layamon was a priest, who lived at Ernley, in North Worcestershire, near the close of the twelfth century His work consists of 32,000 short lines, partly alliterative, like the Anglo-Saxon verse, partly rhymed, like the French original, both kinds being very loosely constructed and irregularly mixed together. A second manuscript of the poem affords an instructive example of the way in which older writings were wont to be modernized in successive transcriptions, it is, perhaps, half a century later than the first, and shows a text which is much altered, and decidedly more modern. 2 The Ormulum, as it is called by its author, an Augustinian monk, from his own name, Ormin, or Orm. The poem — or what remains of it — contains nearly 20,000 short lines, and consists of thirty-two parts, founded on successive gospel selections in the daily church service, the narrative being first set forth in a loose paraphrase, and then followed by homiletic comments. The verses are arranged in couplets, with a line of eight syllables followed by one of seven they are constructed with much regularity of accent, though without either alliteration or rhyme. The language of the poem is more like modern English than that of the contemporary Layamon, but this comes from its being written in a different dialect. Its appearance is rendered uncouth by a peculiarity of spelling, which is not without interest and value to the philologist it carries out consistently the tendency of English orthography to double the consonant which follows a short vowel: thus, *and*, *this*, *after*, *under*, are spelt, *annd*, *thiss*, *affterr*, *unnderr*. 3. The Ancren Riwle, or rule of female anchorites, a prose work by an unknown author, containing a code of monastic regulations for a household of religious ladies. Owing, perhaps, to the nature of its subject, it shows a considerable number of words borrowed from the French and Latin, while in the works before named such words are altogether rare. 4. A metrical paraphrase of the books of Genesis and Exodus It must not be forgotten that during this period each of the Anglo-Saxon dialects was continuing its own course of development or decay. The confusion and distress reigning in the North of England were such that we have no memorials in the Northern Dialect during most, if not the whole, of the Semi-Saxon period. The Southern Dialect, however, has come down to us in an almost unbroken series of works, including the Ancren Riwle and various homilies and lives of saints; while the Midland Dialect (the descendant of the ancient Mercian) is represented by the latest portion of the Chronicle (1124–1154), by the Ormulum (about 1300), and by Genesis and Exodus (about 1240). The great work of Layamon is referred to the West Midland Dialect.

§ 34. Old English Period, 1250–1350. Here the Anglo-Saxon inflection is to a great extent discarded, but only a moderate proportion of words is yet adopted from the French. The principal monuments are: 1. A proclamation of King Henry III., issued in 1258, a short but highly important document 2 A series of metrical romances, — Kyng Alisaunder, the Geste of Kyng Horn, Havelok the Dane, and others, which belong to the latter part of the thirteenth and the beginning of the fourteenth century. They are composed in rhymed verses, and are most of them founded on French originals. The pretty poem of the Owl and the Nightingale belongs to the first half of the same century. 3. The long rhymed chronicle by Robert of Gloucester, who flourished about 1300, and the still longer one by Robert Manning, or Robert de Brunne, who wrote some years later. Both these writers traverse the whole field of English history, mythical and veritable, from Brut and his Trojans down to Henry III. and Edward I. There is also a collection of lives and legends of the saints, which is ascribed (but on insufficient evidence) to Robert of Gloucester. 4. The Cursor Mundi, a rhymed series of Bible stories, legends, etc., covering the seven ages of the world, and containing about twenty-five thousand lines with some five thousand more by way of appendices. 5 The Ayenbite of Inwit (the *Again-bite* [i. e., *Remorse*] *of Conscience*), a translation by Dan Michel of Kent, preserved in an autograph manuscript of 1340.

Throughout this period English was in a state of great dialectical confusion. The

Englishman of Northumberland spoke a language almost or quite unintelligible to the Englishman of Sussex or Wessex, and the Midland dialects formed a sort of mean between the two extremes. Of the works enumerated, the Proclamation and the Chronicle of Robert of Gloucester are South English, the Chronicle of Robert of Brunne is Midland, and the Cursor Mundi is written in the Northern dialect, which again makes its appearance as a literary language. The Ayenbite is pure specimen of the dialect of Kent. The language of the metrical romances in the form in which we have them, shows a mixture of dialectic forms, due to the scribes.

§ 35. Introduction of French Words. In a vocabulary of the words used by English writers during the last half of the thirteenth century, only about twelve per cent of the whole number are foreign to the Anglo-Saxon. If we take the words of any writer as they stand in his pages, the proportion will be much smaller. For Robert of Gloucester, it does not exceed four or five per cent. But from the middle of the fourteenth century, English literature presents in this respect a different appearance. A multitude of Romance words is everywhere seen, mixed with those of Teutonic origin. Even works which, like The Vision of Piers Plowman, were intended for the people, abound in words taken from the French. The difference between the English of 1300 and that of 1350 marks this as the time when the higher classes in England became generally acquainted with the English language. Up to this time the inhabitants of the country had been divided into two bodies, having each a language of its own. The nobility and gentry of Norman origin retained their French, and only in occasional instances acquired the Saxon, which they looked on with contempt, as rude in itself and spoken by an inferior race. They had a copious literature, consisting chiefly of poetry and romance, composed in French, but much of it written on English soil. On the other hand, the mass of the people spoke only English. Of course there must have been many individuals who knew both languages, and could act as necessary mediators between the great parties that knew but one. These, however, formed only a small fraction of the whole people. In those times, a work composed in English could not admit French words to any great extent, for such a work would not be read by the higher classes, and to the lower classes French was generally unintelligible. But the events of the thirteenth century had been gradually filling up the chasm which before separated the two races. When the French possessions of the English crown were wrested from the feeble hands of John, the political ties were severed which had long connected the Normans of England with their brethren across the Channel. Henceforth England, not France, was their country the English people, not the French, were their countrymen. They fought with Saxon fellow-soldiers against French enemies. they struggled against royal prerogative with sympathy and aid from their Saxon fellow-subjects. At the same time, social barriers were giving way. Marriage ties were connecting the two races. Saxons were acquiring wealth, passing into the ranks of the aristocracy, or rising to high positions in the church. The feeling of a common nationality was coming to prevail over the alienating memories of race and conquest. Under such influences, it was natural that the French-speaking aristocracy should begin to learn English. They did this as a matter of convenience, to carry on the necessary intercourse of business and society, without designing to give up the French, which in many instances continued to be spoken in their families for two or three generations longer. The change, we may presume, commenced with that lower, but more numerous, part of the Norman aristocracy who resided constantly on their estates, surrounded by a Saxon population. Once fairly initiated, the movement must have gone forward with rapidity. The court was the last place to be reached by its influence. It is believed that none of the three Edwards was accustomed to speak English In the schools, it is stated that during the first half of the fourteenth century, French was still used as the language of instruction and the medium for learning Latin, but that during the last half of the same century the English gradually took its place By a statute of 1362 it was enacted that "all pleas which shall be pleaded in any court whatsoever, shall be pleaded, showed, defended, answered, debated, and judged in the English tongue," not, as heretofore, in French. Now, English, as spoken by the higher classes who learned it, would naturally be intermixed with French expressions. It would have been otherwise if they had regarded the English as a superior language, as having a finer nature or a higher cultivation than their own. But they doubtless felt that by an intermixture of French they were enriching and ennobling an unrefined and meager idiom. Whenever the French word which rose to their mind bore a shade of meaning for which they found no equivalent in English, they did not content themselves with a loose expression, nor did they endeavor to form by English analogy one that should be exact they employed the French word itself. They did this even when the English offered an equivalent expression, if the French word was particularly recommended by interesting or agreeable associations For words of a technical character they would scarcely think of seeking equivalents in English. The body of the English people were now for the first time brought into oral communication with their rulers. Hearing the French words with the Saxon, they were able to understand their meaning Hearing them from the lips of their superiors they naturally imitated and adopted them. Thus the new importations, bearing the stamp of elegance and fashion, passed from the circles of polite society into the language of the vulgar. They found free entrance into works of literature, not only because they supplied real deficiencies in the English vocabulary, but also because they were especially familiar and acceptable to those classes whom the author would most wish to interest and please.

§ 36. Middle English Period, 1350–1550. From the Norman conquest to 1350 there had been, as we have seen, no one dialect which was regarded as the English literary language, as Tuscan is regarded as Italian, Castilian as Spanish In the latter half of the fourteenth century, however, the Midland dialect showed signs of getting the start of the other two. As the language of London, and as a dialect intelligible to both Northern and Southern Englishmen, it had obviously great advantages, and was rapidly becoming in some measure the common speech, when the Wycliffe versions of the Bible and the works of Chaucer, both composed in this dialect, stamped it at once and for all time as literary English Thus the common English of to-day is the direct descendant, not of King Alfred's West Saxon, but of the old Mercian dialect, and the modern dialects of Somerset and other South English shires are the only living representatives of the West Saxon.

In the Middle English period the old inflection undergoes some further losses, the unaccented final *e* (as in *love*, *fame*, etc) begins to disappear in pronunciation, but the great characteristic of this period is the immense accession of words taken from the French. It will be enough to name here a few of the most important works and authors. In the poems of Laurence Minot, written about 1350, we find for the first time a large proportion of French words. These were followed (between 1360 and 1370) by the popular poem entitled The Vision of William concerning Piers the Plowman, a satirical allegory by William Langland. It is written in alliterative verse of very regular construction. The same species of verse is found in some poems of a similar character which followed the Vision; but it was not used by Chaucer and Gower in the same age, nor has it been used by any poet since the end of that century. The great name of early English literature is Geoffrey Chaucer, who died in 1400; and the Canterbury Tales is the most perfect, as it is probably the latest, of his productions. The charge often brought against him of having corrupted the simplicity of the native popular English by large importation of French words only shows a want of acquaintance with the literature of that time His contemporary, John Gower, whose chief English work is the Confessio Amantis, though far inferior in genius to Chaucer, was for a long time held in equal estimation. To the first half of the fifteenth century belongs John Lydgate, a copious writer and fluent versifier, but of little poetic talent. Among the prose writings of this period, but more important in their influence on the language, were the Wyclifite Versions of the Bible. The Old Testament is supposed to have been translated by Hereford, the New Testament by Wyclif himself, the whole being finished about 1380 To Purvey is ascribed a revision of the whole work, made some eight or ten years later, with many alterations and corrections The Travels of Sir John Mandevile, formerly supposed to have been written in English about 1356, is now known to be merely a translation made from the French about the beginning of the fifteenth century

§ 37. The century from 1450 to 1550 might be regarded as a distinct period The unaccented final *e* was now generally neglected, and at length wholly lost, in pronunciation; and in many ways the language assumed a more modern aspect Literature received a new impulse from the art of printing Among the most important of the numerous books which issued from the celebrated Caxton press (1470 to 1490) was the Morte d'Arthur, by Sir Thomas Malory, a prose compendium of the poetical legends concerning King Arthur and his Knights of the Round Table The translation of Froissart's Chronicle by Lord Berners, which appeared in 1523–25, was not unworthy of the rich and glowing original We may mention also, as excellent specimens of the language at that time, the writings of Sir Thomas More, and the New Testament translation of William Tyndale, which was printed in 1526. As for the poets of that most unpoetic age, it is enough to name the rude but vigorous Skelton. The poems of Surrey and Wyatt, though written before 1550, belong more in language and character to the following period.

§ 38. Commencement of the Modern Period. With the middle of the sixteenth century, the English enters on a new stage of its history It did not cease to change, for then it would have ceased to be a living language But its later changes have not had the rapid progress and the radical character which belonged to those of the preceding centuries Many words which were in use three hundred years ago have since become obsolete. A much larger number have been added to the language, including not only technical and scientific terms by the thousand, but a multitude of words which belong to the common stock of literature and society Words which have been retained have often lost their old meanings and taken on new ones. In the combination and construction of words, in phrase and idiom, the changes have been yet more numerous, and the general color and flavor of English style are quite different now from what they were in the last half of the sixteenth century But these differences are mainly lexical and rhetorical, rather than grammatical As to inflection, the little which remained at that time has come down to us with hardly any change Yet the ending *th* in the third person singular of verbs (as *cometh*, *doeth* or *doth*) has all but disappeared from the common language, and remains chiefly as an archaism of the solemn or religious style, being kept in memory by the usage of the English Bible The subjunctive, as distinct from the indicative in the third person singular (as *if he come*, *if he do it*, *if it be so*), is also growing obsolete Still, we never feel that the language of Shakespeare and Bacon is widely different from our own. Even Spenser, notwithstanding the archaisms with which he loved to garnish his style, appears to us much less strange and remote than Lord Berners and Sir Thomas More The great writers of the Elizabethan age have done much to perpetuate and keep alive the form of English which is seen in their works The authorized version of the Bible has exerted a conservative influence of the same kind, and one even more powerful It must be observed, however, that this version as printed now has not in all respects its original appearance the spelling has been modernized, and a number of obsolete forms have given place to those in present use Thus, *moe* is changed to *more*, *sith* to *since*, *fet* to *fetched*, *ouen* to *oweth*, *unpossible* to *impossible*, etc The recent revision of the English Bible has removed still more of these archaisms, but has left a great many intact If works printed in Shakespeare's day appear strange, at first view, to the modern reader, it is chiefly owing to changes since made in the spelling, which did not become fixed until a century later Unfortunately, these changes are far from having made the orthography of the language simple and consistent The defects of English spelling have to a great extent arisen from the mixture of different elements in the language Neither the Anglo-Saxon orthography nor the Norman-French was distinguished for its regularity But when the two were thrown together, the result was a mass of confusion and anomaly hardly to be paralleled, except, perhaps, in the spelling of the native Irish The present system retains much of this chaotic character It is, perhaps, too firmly fixed for extensive changes, such as could alone effect a material improvement But it is not creditable to the English name, nor accordant with the practical spirit of the English people With a multitude of signs for the same sound, and a multitude of sounds for the same sign, it poorly fulfills the original and proper office of orthography, to indicate pronunciation, nor does it better fulfill the improper office, which some would assert for it, of a guide to etymology It imposes a needless burden on the native learner To a foreigner it seriously aggravates the difficulty of acquiring the language, and thus restricts the influence of English literature or the mind of the world.

§ 39. Introduction of Latin and Greek Words We have already seen that a number of words passed from the Latin into the Anglo-Saxon The same process has gone on in the subsequent stages of the language. With the inception of the Middle English period, it received a new impulse. The admission of foreign words in great numbers from the French, a daughter of the Latin, made it natural and easy to admit them also from the mother language. In many instances it is difficult to determine whether a word of Latin origin has come to us through the French, or has been taken directly from the Latin But while the importation of French words ceased, after a time, to be an active and prominent agency in the growth of the language, it has been otherwise with the tendency to borrow from the Latin. This became even stronger with the increasing attention to classical studies The fondness for Latin phraseology is noticed with censure by Thomas Wilson in his System of Rhetoric and of Logic, published in 1553. "The unlearned or foolish fantastical, that smells but of learning

(such fellows as have seen learned men in their days), will so Latin their tongues, that the simple can not but wonder at their talk, and think surely they speak by some revelation." In like manner, an author of the next century, Sir Thomas Browne, whose own style is in a large measure Latin, remarks, "If elegancy still proceedeth, and English pens maintain that stream we have of late observed to flow from many, we shall within a few years be fain to learn Latin to understand English, and a work will prove of equal facility in either." The practice of adding to the English vocabulary words adopted from the Latin and the Greek is still carried on with activity, and there is little prospect of its ceasing. It is almost necessary as a means of denoting those new objects, ideas, and relations, which are continually appearing and demanding expression. The resources of the English for the formation of new words from elements already existing in it are so limited that aid from other languages is indispensable. The new terms which are required by the progress of science are almost wholly drawn from these sources, especially from the inexhaustible storehouse of Greek expression.

THE ENGLISH A COMPOSITE LANGUAGE.

§ 40. Proportion of the Elements. There is no language, probably, in which all the words are formed by its own processes from roots that originally belonged to it. What is peculiar to the English is not that it has words borrowed from other languages, but that it has so many of them; that a large part of its vocabulary is of foreign origin. In this respect it may be compared to the modern Persian and the Wallachian. The French words which have been ingrafted on the native English stock are, with few exceptions, derived from the Latin; and when added to the almost equal number which have come directly from that language, they make, perhaps, four fifths of all our borrowed words. Much smaller, though still considerable, especially in scientific use, is the number of words taken from the Greek. The remainder of our foreign words can hardly exceed a twentieth part of the whole vocabulary, and are drawn from a great variety of sources — Celtic, Danish, Dutch, Hebrew, Arabic, Turkish, etc. If all the words in a large English dictionary were classed according to their origin, it would appear that the foreign or non-Saxon words make a decided majority of the whole number. It must be remarked, however, that in such a dictionary there are many words which, though perhaps put forward by distinguished writers, have never established themselves in general use; and also many words which belong, indeed, to the established phraseology of particular sciences and arts, but are unknown to the great majority even of educated people. In both classes the number of foreign words is disproportionately large. Hence, if we take all the distinct words used by particular writers, we shall find a different ratio between the Saxon and foreign elements. Of those used by Shakespeare, it is said that sixty per cent are of Saxon origin; and the ratio is about the same for the common version of the Bible. But in most literary works of the last two centuries, the foreign element is certainly larger in general, doubtless, it would be found, if reckoned in this way, to equal or exceed the Saxon. But if, instead of counting only distinct words as they would be given in a vocabulary, we count all the words of a writer as they stand on his pages, we shall obtain very different ratios. The Saxon words will now be found in a large majority, varying from sixty to more than ninety per cent of the whole number. The style of Johnson abounds in words of Latin origin; but in the Preface to his Dictionary there are seventy-two per cent of Saxon words. In Milton's poetical works about two thirds of the vocabulary are foreign; but in the sixth book of Paradise Lost, four fifths of all the words are Saxon. The explanation of these appearances lies in two facts. 1. The words which belong more to the grammar than to the lexicon — which express not so much conceptions of the mind as the relations between its conceptions — are almost wholly Saxon. To this class belong articles, pronouns, adverbs from pronominal roots, nearly all prepositions and conjunctions (only *save*, *except*, *during*, *concerning*, *because*, and a few more, are French). These are words which occur in every sentence In a language, like ours, of scanty inflection, it is hardly possible to form two consecutive sentences without them. The substantial elements of the proposition, nouns, adjectives, verbs, may all be obtained from abroad; but the connecting links, which must unite them in the framework of sentences, can only be found at home. 2 If we turn to these substantial elements, and fix upon the objects, qualities, states, and actions which most frequently present themselves to the mind, and thus call for the most frequent expression, it will be found that a large majority of them are denoted by words of Saxon origin. We refer to objects, such as *man*, *horse*, *bird*, *body*, *flesh*, *blood*, *head*, *hand*, *heart*, *soul*, *mind*, *heaven*, *wind*, *rain*, *day*, *summer*, *water*, *stone*, *gold*, *field*, *tree*, *apple*, etc.; to qualities, such as *good*, *ill*, *long*, *short*, *cold*, *hot*, *hard*, *soft*, *white*, *black*, etc.; to actions, such as to *lie*, *sit*, *stand*, *walk*, *run*, *do*, *say*, *have*, *break*, *think*, *feel*, *love*, *fear*, *find*, etc. There are borrowed words of similar meaning, as *beast*, *eagle*, *vein*, *face*, *spirit*, *air*, *hour*, *autumn*, *river*, *gem*, *fruit*, *flower*, etc.; *large*, *false*, *tender*, *pure*, *purple*, etc; to *move*, *enter*, *touch*, *please*, *enjoy*, etc., but they are altogether fewer, and generally of less frequent occurrence. The words for numbers lower than a *million* are all Saxon: among the ordinals only *second* has come in from the French

§ 41. Fusion of the Elements. The foreign words that have come into our language do not stand by themselves as a distinct and independent class: they are Anglicized, subjected to English laws and analogies, and thus assimilated to the older denizens of the language. This has taken place chiefly in three ways: 1. They are in most cases accented according to English analogy. This assumption of a new accent has been a gradual process. In early English poetry we find *cuntré* (country), *colour*, *comaúndëment*, *messangére*, *benysoún* (benison), *castéll* (castle), etc., accented as in French on the vowel here marked. The usage of Chaucer is quite variable. Such words as *honoúr*, *difficultée*, *penaúnce*, *vanquésh*, *manére* (manner), *conseil* (counsel), *viáge* (voyage), etc., he often gives, as here marked, with the French accent; yet not unfrequently he shifts their accent, according to English tendencies, toward the beginning of the word. In the next century the French accent is still to be seen, but with a greater prevalence of the English. And the latter had established itself in Shakespeare's time nearly as at the present day. A number of words which as verbs retain the French accent, when used as nouns exchange it for an English one: thus *áccent* and *to accént*, *cóncert* and *to concért*, *insult* and *to insúlt*, etc. 2. The borrowed words are declined according to English analogy. It is true that *radius*, *nucleus*, *momentum*, *criterion*, *phenomenon*, and some other words, retain their Latin and Greek plurals, *radii*, *nuclei*, *momenta*, *criteria*, *phenomena*, etc. But these are rare exceptions. In general, the few inflections left in English are applied as readily to a French or Latin word as to a Saxon one. As the Saxon verb *love* makes *lovest*, *loves*, *loved*, *lovedst*, *loving*, so the French verb *move* makes *movest*, *moves*, *moved*, *movedst*, *moving*. 3. The borrowed words are often made to receive prefixes which come from the Saxon, as in *be-siege*, *un-pretending*, *mis-conceive*, *under-value*, *over-turn*, *after-piece*, *out-line*, etc.; or formative suffixes which come from the Saxon, as in *large-ness*, *duke-dom*, *false-hood*, *apprentice-ship*, *useless*, *grate-ful*, *quarrel-some*, *fool-ish*, etc. It affords a still more striking evidence of the fusion which has taken place among the elements of our language, that the process here described is in many cases reversed; that particular endings which were found in the foreign words, have become so familiar to the English ear and mind, as to be disjoined from their connections, and applied with more or less frequency to words of native stock. Thus, we find Saxon words with Latin or French prefixes, as in *en-dear*, *dis-belief*, *re-light*, *inter-mingle*, *trans-ship*, etc.; and Saxon words with Latin or French formative suffixes, as in *forbear-ance*, *bond-age*, *atone-ment*, *thiev-ery*, *stream-let*, *eat-able*, *burí-al*, *murder-ous*, etc.

§ 42. Different Character of the Elements. It must be admitted that the fusion of which we have spoken is not a complete one. The borrowed words, taken as a class, have a peculiar character, which separates them, even to the feeling of uneducated persons, from those of native stock. There are, indeed, particular cases in which the ordinary relation does not hold; there are some in which it is actually inverted, as in *sign* and *token*, *color* and *hue*, *power* and *might*. Here the familiar *sign*, *color*, *power*, are from the French, and the more poetical *token*, *hue*, *might*, are from the Saxon. But in general the Saxon words are simple, homely, and substantial, fitted for every-day events and natural feelings; while the French and Latin words are elegant, dignified, and artificial, fitted for the pomp of rhetoric, the subtility of disputation, or the courtly reserve of diplomacy. The difference arises partly from the fact already noticed, that the most familiar objects, qualities, and actions have generally retained their primitive Saxon designations. The foreign words bear an impress derived from the courtiers and scholars who introduced them. To a great extent they stand for conceptions which belong especially to disciplined thought and cultivated feeling. But the difference, no doubt, depends also on the impression which the two classes of words make upon the ear. The Saxon are shorter, in great part monosyllabic, and often full of consonants; while the French and Latin words are longer, smoother, and have greater breadth of vowel sounds. It can not well be denied that this marked diversity of character between native and foreign words gives to our language a somewhat heterogeneous and incongruous aspect. Yet it furnishes means for great variety in the expression of the same thoughts, and serves to distinguish and individualize the styles of different authors. Among writers who in this respect occupy an extreme position, may be named, on the one side, Bunyan, De Foe, Franklin, and Cobbett; on the other, Hooker, Milton, Johnson, and Chalmers.

§ 43. It has been observed that in the Liturgy of the church of England there is a marked tendency to couple French and Saxon expressions of the same, or nearly the same, meaning: thus, "to *acknowledge* and *confess*;" "by his infinite *goodness* and *mercy*;" "when we *assemble* and *meet together*" A similar tendency has been pointed out elsewhere, as in the writings of Hooker.

§ 44. It was natural that when a multitude of foreign words were brought into our language, many should coincide in meaning with words that already belonged to it. In some cases, as in *will* and *testament*, *yearly* and *annual*, *begin* and *commence*, etc., the two words have continued to be used with scarcely any difference of meaning. But the tendency has been to turn the new material to good account by giving to the words of each pair senses more or less clearly distinguished from each other. In *body* and *corpse*, *love* and *amour*, *work* and *travel*, *sheep* and *mutton*, etc., the distinction is a broad one: in *bloom* and *flower*, *luck* and *fortune*, *mild* and *gentle*, *win* and *gain*, etc., it is slighter and more subtle The discriminations thus established have added much to the resources of the language, giving it a peculiar richness and delicacy of expression.

THE ENGLISH POOR IN FORMATION AND INFLECTION.

§ 45. Power of Self-development lost. The English has lost a large part of the formative endings which belonged to the Anglo-Saxon. Many which still appear in English are confined to the particular words that now have them, and can no longer be used in the formation of new words. Only a very few (as *-er*, *-ing*, *-ness*, for substantives, *-y*, *-ish*, for adjectives, *-en* for verbs; *-ly* for adverbs) continue to be used with much freedom for this purpose. So, too, many prepositions and particles which were once freely employed as prefixes in the formation of compound verbs, are no longer used in this way. From the simple verb to *stand* the English makes *understand* and *withstand;* the Anglo-Saxon had *ætstandan*, *bestandan*, *bigstandan*, *forstandan*, *forestandan*, *gestandan*, *ófstandan*, *understandan*, *wiðstandan*, *ymbstandan*. This deficiency in English is made up in a measure by the use of separate particles, as, to *stand up*, to *stand off*, to *stand by*, to *stand to*, etc. Still the formative system of the language has become greatly restricted. It no longer possesses the unlimited power of development from its own resources which we see in the Anglo-Saxon and in the modern German. If a new word is wanted, instead of producing it from elements already existing in English, we must often go to the Latin or the Greek, and find or fashion there something that will answer the purpose. By this process our language is placed in a dependent position, being reduced to supply its needs by constant borrowing. But it is a more serious disadvantage that in order to express our ideas we are obliged to translate them into dead languages. The expressiveness of the new term, that which fits it for its purpose, is hidden from those who are unacquainted with the classic tongues; that is, in many cases, from the great body of those who are to use it. To them it is a group of arbitrary syllables, and nothing more. The term thus loses its suggestiveness, and the language suffers greatly in its power of quickening and aiding thought.

§ 46. Freedom of Position restricted. It is one disadvantage arising from the loss of inflection that our language is much restricted in the position and arrangement of words. The result is unfortunate, not only as it tends to monotonous uniformity of expression, but still more as it takes away the best means of representing emphasis, or the superior importance of a particular word in the sentence. The simple Latin sentence, "*dux regem decepit*," may be arranged in six different orders without doing violence to Latin idiom; the choice of one order rather than another, if partly regulated by euphony or by love of variety, is also much influenced by the relative importance of the terms. But the corresponding English sentence has its fixed, invariable order, "the general deceived the king:" transposition would give it a wholly different meaning. It is true that we are able by a change from active to

passive, as well as by other devices, to secure variety of expression, and to satisfy the demands of emphasis: thus "the king was deceived by the general;" "it was the general who deceived the king;" "it was the king who was deceived by the general;" "a deception was practiced by the general on the king," etc. Still, with all such helps, we are often obliged to indicate by the clumsy device of Italic letters what a more highly inflected language could have shown in the position of the words. It should be said, however, in justice to the English, that it uses nearly all the freedom of arrangement, which, scantily inflected as it is, would be consistent with perspicuity. It is therefore superior in actual variety of arrangement to the French, and perhaps not inferior to the more highly inflected German, which in the ordinary prose style has limited its natural freedom by inconvenient and cumbrous restrictions.

§ 47. Monosyllabism and Want of Euphony. The loss of inflection has reduced a multitude of English words to the form of monosyllables. It is not uncommon to find whole sentences which contain no word of greater length. This peculiarity helps us to understand, better than most other nations are able to do, that primitive monosyllabic condition which must have preceded all inflected language — a condition which has remained unchanged to this day in languages like the Chinese, where every syllable is a separate word, with its own accent and its own distinctly apprehended meaning. If this monosyllabic character gives a certain plain directness and pithy force to English expression, it can hardly be doubted that it is a disadvantage to euphony and rhythm. Pope complains that "ten low words oft creep in one dull line." And no one can read Chaucer's poetry, pronouncing the unaccented *e* as the verse requires, and as it was actually pronounced in the poet's time, without regretting that a hurried and slurring pronunciation of our fathers should have destroyed this pleasing feature of the old language. The suppression of this *e* has also been unfavorable to euphony by producing, in a multitude of cases, the harshest combinations of consonants; as in *hosts*, *breadths*, *texts*, *shifts*, *thirsts*, *bulg(e)d*, *starch(e)d*, *task(e)d*. In these words, which can not be properly pronounced without a strong effort of will and of vocal organs, the earlier dissyllabic forms, *host-es*, *breadth-es*, *starch-ed*, *task-ed*, etc., presented little or no difficulty of utterance. In most of these cases, as in many others, the harshness has been aggravated by that extended use of the final *s*, which has given a peculiar sibilating character to the pronunciation of our language. In Anglo-Saxon, only a part of the nouns took *s* in the plural, and those only in two out of the four cases. In English, the *s* has been applied to nearly all plural nouns, and for all cases of the plural. In Anglo-Saxon, the verb in the third person singular of the present has *th* (ð or þ), never *s* (though the Northumbrian dialect has often *-es*); in the English of our day, this *th* is still occasionally employed as an archaic form, but in all ordinary use *s* has taken its place.

DIALECTS.

§ 48. The English language is not spoken with uniformity by all who use it. Nearly every county in Britain has its local dialect, its peculiar words and forms, which are used by the common people of the lower classes This diversity is, in part, of long standing; in some points, it goes back even to Anglo-Saxon times. This great variety of local idioms may be classified, according to Mr. Ellis, in six divisions: Southern, Western, Eastern, Midland, Northern, and Lowland (Scotch), each of which falls apart into several subdivisions or districts. For most of the dialects, glossaries have been published, often with specimen-compositions of greater or less extent; but only the Scotch (the lineal descendant of the Old Northumbrian) can be said to have a literature. Scottish literature, which is almost wholly poetical, begins in the fourteenth century, with John Barbour, a contemporary of Chaucer. His long historical poem, entitled The Bruce, was followed in the early part of the next century by the Originale Chronykil of Andrew of Wynton, and in its latter part by the Wallace of Henry the Minstrel, often called Blind Harry. But the King's Quair, by the unfortunate James I. of Scotland, is not written in the Scottish dialect. In the sixteenth century we find, first, Gawin Douglas, the translator of the Æneid and author of the Palace of Honour, and then two poets of higher genius, William Dunbar and Sir David Lyndsay. In more recent times, the most eminent writers of this dialect are Allan Ramsay, the author of the Gentle Shepherd, and, greatest of all, Robert Burns.

§ 49. In every dialect, apparently, there are preserved a certain number of old words and forms, which have passed out of use or have suffered alteration in the common language; but it is equally true that every dialect has lost or altered some which remain unchanged in the common language. Thus, if the Scotch *kye* for *cows*, *brak* for *broke*, etc., are closer to the Anglo-Saxon than are the corresponding English words, the contrary is true of *gie* for *give*, *fa'* for *fall*, *houd* for *hold*, *winna* for *will not*, etc. It is believed that, on the whole, the common English stands nearer than any of the dialects to the early form of the language.

§ 50. The English, as spoken by the common people of Ireland, has many peculiarities, both of sound and of idiom, borrowed from the Gaelic, which was once the language of the whole island.

§ 51. In America, settlers from different parts of the mother-country were brought together in the same colonies, so that no dialect of England or Scotland has been preserved in its distinctness on the new continent. At the same time, the migratory habits of the people have had the effect of securing a general uniformity of language in all parts of the country. With the exception of the negro dialect in the Southern States, it can hardly be said that there are strongly marked local dialects in America. The forms of speech which are noticed as Americanisms, are not, in general, confined to a particular State or district Under this name are included expressions which are widely different in their character. Some are confined wholly to uncultivated people; others to those who are not only uncultivated, but vulgar; while a large part are constantly, and indeed necessarily, used by persons of the highest education. They also differ widely in their origin. Some are derived from the native Indian languages, as *wigwam*, *squaw*, *hominy*, etc.; some from the French, as *levee*, *crevasse*, *bayou*, etc, some from the Spanish, as *rancho*, *canyon*, *stampede*, etc; yet more from the Dutch, as *patroon*, *boss* (master-workman), *stoop* (porch), etc. Most of the foregoing words relate to things that are specially American · to express other objects or relations of this kind, new formations have been made from English words, as *congressional*, *federalist*, *mileage*, *nullification*, etc.; or English words have been used in new meanings, as *eagle* (coin), *corduroy* (road), to *locate* land, etc. There are other cases of new formation, which have no such reason, as *outsider*, to *eventuate*, etc., or of new senses for old words, as to *fix* (put in order), *creek* (small river), etc. Some words which once belonged to the common language, but have become obsolete in England, are still heard in America, as *fall* (autumn), *gully* (channel worn by water), *peek* (peep), *rare* (underdone), etc. A larger number of Americanisms have come from the English dialects, as *bail* (handle of pail), *shack* (worthless fellow), *spry* (nimble), to *lam* (beat), to *slump* (break through snow or bog), etc. And beside these, there are words and uses of words which are mere vulgarisms, the language of cant or slang, as to *absquatulate* (abscond), *splurge* (pompous display), to *fork over* or *shell out* money, etc. A number of words will always be wanted to express what is peculiar to America in nature, society, and institutions. But apart from these, it is not probable that Americanisms will ever be multiplied to any great extent. For, besides the active and increasing intercourse with the other side of the Atlantic, the almost universal habit of reading, which finds exercise both in English and American authors, will have a powerful tendency to keep the language, even of the poorer classes, in substantial agreement with the common language of literature.

The following brief sketch of Anglo-Saxon inflection follows mainly the *Angelsächsische Grammatik* of Eduard Sievers, 2d edition, Halle, 1886. The outlines of early English inflection are founded on Eduard Fiedler's *Wissenschaftliche Grammatik der englischen Sprache*, Leipzig, 1861, and the *Historische Grammatik der englischen Sprache* of C. Friedrich Koch, with much help from Prof F J Child's *Observations on the Language of Chaucer* (in Memoirs of the American Academy, New Series, Vol. VIII.).

ANGLO-SAXON INFLECTION.

§ 52. The Anglo-Saxon had seven long vowels, *á*, *é*, *í*, *ó*, *ú*, *ǽ*, *ý*. The first five appear to have been sounded as in Eng. *par*, *prey*, *caprice*, *prone*, *prune* *ǽ* was probably sounded much like Eng. *a* in *fair*. The sound of *ý* apparently, like that of French *u* and German *ü*, was intermediate between *ú* and *í* To these correspond seven short vowels, *a*, *e*, *i*, *o*, *u*, *æ* (like Eng. *a* in *hat*), *y*, which were less prolonged in utterance. The short *i* and *y* are often confounded in writing, as *hyrde* or *hirde* (*hierde*), shepherd, *cining* (but more correctly *cyning*) king.

§ 53. The Anglo-Saxon had four diphthongs, *ea*, *eo*, *ꝛo*, *ie*, which in some cases stood for original short vowels, and were then short in quantity, in other cases were genuine (long) diphthongs (written *éa*, *éo*, *ío*, *íe*). Whether long or short the first element of the double sound received the stress of voice. Short *ea* and *eo* (or *ꝛo*) commonly stand for original *a* and *e* (or *i*) respectively, long *éa*, *éo*, for primitive Teutonic *au*, *eu*. Short *ie* (later written *i*, *y*) is commonly a modification of *ea* or *eo;* long *ie* (later *í*, *ý*), a modification of *éa*, *éo*.

§ 54. The Anglo-Saxon had two characters for the interdental spirant (*th*), ð and þ. These signs were used without distinction of sound. The old theory that þ represented the whispered sound heard in Eng. *thin*, *breath*, ð the vocal (voiced) sound heard in *this*, *breathe*, is not borne out by the MSS. Both sounds were doubtless known to the Anglo-Saxon, but there was no attempt to distinguish them in writing. In normalized texts many modern editors print þ at the beginning of a word, elsewhere ð; but there is no uniformity of practice in this respect.

§ 55. The Anglo-Saxon never uses *y* as a consonant; but *g* was sometimes used to express that sound, as in *geoc*, yoke, *git*, you two. The letter *h* before a consonant, or at the end of a word, must have had a stronger sound than in English (cf. the sounds of *ch* in German *ach* and *ich*). The letter *f* served to indicate two sounds that of Eng. *f* in *father* (so always at the beginning of a word), and that of English *v* in *have* (so generally in other places in the word).

§ 56. It is a general rule that a consonant can not be doubled either at the end of a word or before or after another consonant, as *swam* (for *swamm*), he swam, *swimð* (for *swimmð*), he swims, *sende* (for *sendde*), he sent, *éhte* (for *éhtte*), he persecuted.

§ 60. Words of more than one syllable which end in *-el*, *-en*, *-er*, *-or*, are often syncopated before a case-ending, as *ealdor*, masc., elder, gen. *ealdres; tácen*, neut, token, plur. *tácnu:* so, also, some others, as *máðum*, masc., treasure, gen. *máðmes.*

§ 61. Masculines and neuters of one syllable which have the vowel *æ*, take *a* instead of *æ* in the plural, as *dæg*, masc., day, plur. *dagas; fæt*, neut., vessel, plur. *fatu.*

§ 62. Masculines and neuters sometimes have *-ena* or *-ana*, instead of *-a*, in the gen. plur. A few masculines — as *léode*, people, *Dene*, Danes — have *-e* in the nom. acc. plur. *Sunu*, son, nom. acc. sing., makes *suna* in the gen. dat. sing. and nom. gen. acc. plur., *sunum* in the dat. plur. *Wudu*, masc., wood, is declined in the same way, but also later with gen. sing. *wudes*, nom. acc. plur. *wudas* (so also *sunas*). The dat. sing. in *-a* is seen also in masc. *winter*, winter, *sumer*, summer, *feld*, field, *ford*, ford, *weald*, wood, and fem. *hand*, hand, *duru*, door. The last two words have *-a* in the gen. sing. *Feld*, etc., have later gen. sing. in *-es*, nom. acc. plur. in *-as*.

§ 63. Neuters of one syllable which have a long vowel or end in two consonants, drop *-u* in the nom. acc. plur., as *léaf*, leaf and leaves, *word*, word and words. Neuters of more than one syllable have sometimes *-u*, sometimes no ending.

N DECLENSION.

§ 64. Paradigms: masc. *oxa* (stem *oxan-*), ox, fem. *tunge* (stem *tungan-*), tongue; neut. *éage* (stem *éagan-*), eye.

§ 65. Of consonant stems ending in other letters than *n*, the language has only traces. Thus substantives in *-nd* from present participles are declined in the sing. like *fisc*. The nom. and acc. plur. are either like the nom. sing. or add *-e*, but in some words the ending *-as* occurs: thus, *helmberend*, helm-bearer and helm-bearers; *hettend*, *-e*, haters, *wealdendas*, rulers. In dissyllables the gen. plur. always ends in *-ra:* thus *wigendra*, from *wigend*, warrior. *Fréond*, friend, and *féond*, foe, make dat. sing. *friend*, *fiend*, or *fréonde*, *féonde*, plur. nom. acc. *friend*, *fiend*, or *fréond*, *féond*, in poetry often *fréondas*, *féondas*.

The masculines *fót*, foot, *tóð*, tooth, *man* (gen. *mannes*), man, and the feminines (nom. and acc.) *bóc*, book, *bróc*, breeches, *gós*, goose, *cú*, cow, *tús*, louse, *mús*, mouse, *burg*, *burh* (gen. *burge*, also *byrg*, *byrig*), town, fort, *turf*, turf, make in the dat. sing. and nom. acc. plur. *fét*, *téð*, *men*, *béc*, *bréc*, *gés*, *cý*, *lýs*, *mýs*, *byrig*, *tyrf*.

§ 66. *Fæder*, father, is indeclinable in the sing (gen. sing. rarely *fæd(e)res*); in the plur. it is declined like *fisc*. *Bróðor*, brother, nom gen. acc. sing., makes dat. *bréðer;* plur. nom. acc. *bróðor* or *bróðru*, dat. *bróðrum*. Similarly are declined *módor*, mother (nom acc. plur. *módra*, *módru*), *dohtor*, daughter (dat. sing. *dehter*), *sweostor*, sister (sing. indeclinable, plur. nom acc. *sweostor*).

§ 67. The fem. *niht*, night, and *mægð* or *mægeð*, maid, make the acc. sing. and nom. acc. plur. like the nom. sing. The neuters *ég*, egg, *cealf*, calf, and *lamb* (*lomb*), lamb, make in the nom. acc. plur. *égru*, *cealfru*, *lambru* (*lombru*), retaining an old *r*. *Cild*, child, which is usually declined like *word*, has also sometimes nom. acc. plur. *cildru*, gen. *cildra*. Feminine abstracts in *o* or *u* — as *ieldu*, old age — are indeclinable in the sing. The fem *sé*, sea, has some masculine forms it is declined, nom. dat. acc. sing. *sæ*, gen. *sæ* or *sæs*, nom. acc. plur. *sæs* or *sæ*, gen. *sæwa*, dat *sæm*. The fem. *éa*, water, is usually indeclinable in the sing. (but sometimes has gen. dat. *ée*, in the plur. it has generally nom. gen. acc. *éa*, dat. *éam*. The fem. *é*, law, is invariable in the whole sing. and the nom. acc. plur. (gen. dat. sing. *éwe* sometimes occur).

ADJECTIVES.

§ 68. Indefinite Declension. Paradigm. *blind*, blind.

	Sing.			Plur.
	Masc.	Fem.	Neut.	
Nom.	*blind*	*blind*	*blind*	*blinde* (neut. *blind*)
Gen.	*blindes*	*blindre*	*blindes*	*blindra*
Dat.	*blindum*	*blindre*	*blindum*	*blindum*
Acc.	*blindne*	*blinde*	*blind*	*blinde* (neut. *blind*)
Ins.	*blinde*	——	*blinde*	——

§ 69. The instrumental case is not distinguished from the dative, except in the sing. masc. and neut. In the plural, the three genders are alike, except that the neuter of monosyllabic adjectives short in quantity and (though not uniformly) of adjectives of more than one syllable has *-u* or *-o*, instead of *-e*, in the nom and acc.. thus, masc. fem. pl. *tile*, neut. *tilu*, from *til*, good. Another ending for the nom. acc. plur. fem. of all adjectives is *-a*. Adjectives of one syllable, unless they have a long vowel or end in two consonants, add *-u* in the nom. sing. fem., as, *smalu*, from *smæl*, small. so, also, many adjectives of more than one syllable.

§ 70. The following peculiarities extend also to the definite declension. Adjectives of one syllable, which end in a single consonant preceded by *æ*, take *a*, instead of *æ*, when a vowel follows in the inflection, as, *smæl*, small, *smælne*, *smælra*, but *smalu*, *smales*, *smalum*, etc., and def *smala*, *smalan*, etc Adjectives of more than one syllable which end in *-el*, *-en*, *-er*, *-ig*, are often syncopated when a vowel follows in the inflection; as, *fæger*, fair, *fægerne*, *fægerra*, but *fægru*, *fægres*, *fægrum*, def *fægra*, *fægran*. Adjectives of more than one syllable which end in *-e* lose this *-e* before all endings, as, *bliðe*, blithe, *bliðe-es*, *bliðre*, *bliðum*, *bliðne*, def. *bliða*, *bliðam*. This last remark applies to all present participles.

§ 71. Adverbs are formed from adjectives by adding *-e;* as, *swiðe*, strongly, very, from *swið*, strong, *hraðe*, soon, from *hræð*, quick. Adverbs in *-lice* (Eng. *-ly*) were first made by adding *-e* to compound adjectives in *-lic;* as, *héalice*, highly, from *héalic*, a compound of *héah*, high, and *-lic* (cf. *gelic*), like but the adverb is often found where there is no adjective in *-lic*, as *sóðlice*, truly, from *sóð*, sooth, true.

§ 72. Definite Declension. When the substantive to which the adjective belongs is definite, — as when it is connected with the definite article, or with a demonstrative or possessive pronoun, or with a genitive case, and when it stands in the vocative, — the adjective is inflected according to the N declension, as follows: —

	Sing.			Plur.
	Masc.	Fem.	Neut.	
Nom.	*blinda*	*blinde*	*blinde*	*blindan*
Gen.	*blindan*	*blindan*	*blindan*	*blindra* (*-ena*)
Dat.	*blindan*	*blindan*	*blindan*	*blindum*
Acc.	*blindan*	*blindan*	*blinde*	*blindan*

§ 73. Comparative and Superlative. The comparative takes *r*, and follows the definite declension; as, *léafra*, dearer, from *léaf*, dear. The superlative takes *-est* (or *-est*), and is declined both definitely and indefinitely: as, *léafast* (or *léafest*), dearest. Some adjectives suffer a change of vowel, in which case the superlative can not have *-est: lang*, long, *strang*, strong, take *e:* as, *lengra*, *strengest: eald*, old, *geong*, young, *feor* (adv.), far, take *ie;* as, *ieldra*, *fierrest: héah*, high, *néah* (adv.), nigh, make *hierra*, *hiehst* (*héahst*, *héhst*), *néarra*, *niehst* (*néhst*). Several superlatives, most of them from adverbs, take *-mest;* as, *formest* or *fyrmest*, foremost; *æftermest*, aftermost; *lætemest*, last; *síðemest*, latest; *niðemest*, lowermost; *yfemest* (*ufemest*), uppermost; *útemest* (*útemest*), outmost, *innemest*, inmost; *midmest*, midmost; *hindemest*, hindmost: these are really superlatives from forms in *-ma* with the definite declension, as, *forma*, *hindema*, in which *-ma* is a superlative ending. Yet more irregular are —

Pos.	Compar.	Superl.	
gód	*betera*, *bettra*	*betst*, *betest*, *betost*	good
yfel	*wiersa*	*wierest*, *wierst*	evil
lýtel	*léssa*	*lést*	little
micel	*mára*	*mést*	much

§ 74. Comparative and superlative adverbs are regularly formed from adjectives by the endings *-or* and *-ost;* as, *hraðor*, *hraðost*, from *hræð*, quick.

PRONOUNS.

§ 75. The **Personal Pronouns** are declined as follows: —

	First Person.			Second Person.		
	Sing.	Dual.	Plur.	Sing.	Dual.	Plur.
Nom.	*ic*	*wit*	*wé*	*þú*	*git*	*gé*

Dat.	*him*	*hire*	*him*	*him*
Acc	*hine*	*hie*, *hí*, *héo*	*hit*	*hie*, *hí*, *héo*

Other forms are *uncit* (= *unc*), *incit* (= *inc*), in the acc. dual, *úsic* (= *ús*), *éowic* (= *éow*), in the acc plur, *úre* (= *úser*) in the gen. plur.; *hiere* in the gen. dat. sing. fem, *hig* (= *hí*) in the nom. acc. plur., *heom* (= *him*) in the dat. plur.; *heora* (= *hira*) in the gen plur

§ 76. The **Possessive Pronouns** of the first and second persons are made by giving to the genitives of the personal pronouns the inflection of the indefinite adjective, as, nom *mín*, *mín*, *mín*, my, mine, gen. *mines*, *minre*, *mines*, dat. *minum*, *minre*, *minum*, etc *User*, before all endings but *-ne*, becomes *úss* by assimilation of *r:* thus, gen. *ússes*, *ússe*, *ússes* (for *ús(e)res*, etc). The possessive of the third person is simply the uninflected genitive of the personal pronoun, *his*, *hire*, *his*, plur. *hira*. But *sín* is sometimes used in the reflexive sense, *his own*, *her own*, *its own*, *their own*

§ 77. The **Demonstrative Pronouns** are declined as follows: —

1. *Sé*, *séo*, *þæt*, used also as a definite article, and as a relative pronoun.

	Sing.			Plur.
	Masc.	Fem.	Neut.	
Nom.	*sé*	*séo*	*þæt*	*þá*

Acc.	*þisne*	*þás*	*þis*	*þás*
Ins.	——	——	*þýs*, *þis*	——

Varying forms are *þissere* or *þisre* (= *þisse*), *þissera* or *þisra* (= *þissa*), and *þés* (= *þás*).

§ 78. Other demonstratives are *swile*, *swelc*, or *swylc*, such, *pyslic*, *pullic*, and *puslic* (*pullic*), such, *ylc*, the same, with definite declension, *self* or *sylf*, the same, with definite declension: *self*, *sylf*, with indefinite declension, is emphatic; as, *ic self*, I myself, *mé sylfum*, to me myself.

§ 79. The **Interrogative Pronouns** are *hwá*, masc. and fem., who? *hwæt*, neut, what? — *hwæðer*, which of two? — *hwile* or *hwylc*, of what sort? The last two are regularly declined as indefinite adjectives. The first is declined as follows: —

	Masc. and Fem.	Neut.
Nom.	*hwá*	*hwæt*
Gen.	*hwæs*	*hwæs*
Dat.	*hwæm*, *hwám*	*hwæm*, *hwám*
Acc.	*hwone*	*hwæt*
Ins.	——	*hwý*, *hwí*

§ 80. The interrogatives are changed to indefinites by various additions: *éghwá, éghwæt, gehwá, gehwæt*, whoever, whatever, each one; *swá hwá swá, swá hwæt swá*, whosoever, whatsoever; *hwæt-hwugu* or *hwæt-hwegu*, somewhat, a little; *éghwæðer* or *égðer, gehwæðer*, whichever, each, of two; *áhwæðer, áwðer, áðer*, either of two; *náhwæðer, náwðer, náðer*, neither; *éghwilc, gehwilc*, whichever, etc. Other indefinites are *élc*, each, *eall*, all, *sum*, some, *óðer*, other, *manig*, many, *ænig*, any, *án*, one, a, *nán*, none, *nænig*, not any, *wiht*, thing, *áwiht, áwht, áht*, aught, *náwiht, náwht, náht*, naught, etc.

§ 81. As a Relative Pronoun, the Anglo-Saxon either uses the demonstrative *sé, séo, þæt*, or employs the indeclinable *þe* (*þé*), and sometimes adds the latter to the former; as, *sé þe, séo þe*, etc.

VERBS.

§ 82. Verbs of Primary Inflection (*Strong Verbs*). These form the perfect without any addition, except the personal endings, after the root or stem. Those which have the vowels *é* or *éo* in the perfect, show traces of a primitive reduplication, and are divided into several classes according to the vowels — *a, á* (not followed by *w*), *á* (followed by *w*), *æ, ea, éa, ó* (*é*) — which they have in other parts of the verb. In the examples we give, 1. The infinitive; 2. The singular of the perfect; 3. The plural of the perfect; and, 4. The passive participle.

	Inf.	Perf. Sing.	Perf. Plur	Pass. Part	
I.	*blandan*	*blénd*	*blændon*	*blanden*	blend
II.	*lácan*	*léc*	*lécon*	*lácen*	play
III.	*blówan*	*bléow*	*bleowon*	*blówen*	blow
IV.	*létan*	*lét*	*léton*	*léten*	let
V.	*healdan*	*héold*	*héoldon*	*healden*	hold
VI.	*héawan*	*héow*	*héowon*	*héawen*	hew
VII.	*rówan*	*réow*	*réowon*	*rówen*	row
	wépan	*wéop*	*wéopon*	*wépen*	weep

Those which do not have *é* or *éo* in the perfect are divided into six classes according to the series of vowels found in the principal parts (inf., perf. sing, perf. pl, pass. part.) (I.) *í, á, í, í*, including all verbs that have *í* in the inf.; (II) *éo* (*ú*), *éa, u, o*, distinguished by the *éo* (or *ú*) of the inf.; (III) *i* (*e, eo*), *a* (*ea*), *u, u* (*o*), — falling into three subclasses according as the vowel of the inf. is followed, 1 by a nasal and a consonant, 2. by *l* and a consonant, 3. by *r* or *h* and a consonant, (IV.) *e, æ, é, o*, including such verbs as have in the inf. *e* followed by a single liquid, (V.) *e, æ, é, e*, including such as have in the inf. *e* followed by a single consonant, not a nasal or a liquid, (VI.) *a, ó, ó, a*, verbs that have *a* in the inf.

VI.	*galan*	*gól*	*gólon*	*galen*	sing
	weazan	*wóz*	*wózon*	*wazen*	wax

Niman, to take, *nóm, nómon, numen*, and *cuman*, to come, *c(w)óm, c(w)ómon, cumen* or *cymen*, show special irregularities, but may be referred to Class IV

§ 83. In verbs of primary inflection, the vowel which appears in the infinitive belongs also to the present indicative and subjunctive, the imperative, and the active participle. The vowel which appears in the plural of the perfect indicative belongs also to the second person singular, and to the whole perfect subjunctive But in the second and third person singular of the present indicative, *a* is changed to *e*, *á* to *æ*, *e* to *i* (*ie*); *ó* to *é*; *éo, éa*, to *ie* (*i*, later *ý*); *ú* to *ý*, *ea, eo*, to *ie* (*i*, later *y*). It will be enough to give a single paradigm: —

Imp.	Inf.	Part.	
Sing. 2. *help*	*helpan*	Act.	*helpende*
Plur. 3. *helpað*	*helpanne*	Pass.	*holpen*

§ 84. The form *helpanne* is a dative of the infinitive, and is used with the preposition *tó*.

§ 85. When the plur. of the pres. ind. and of the imper. is followed immediately by the subject pronoun (*wé, gé*, etc.), the regular form in *-að* is often replaced by a form in *-e*; as, *helpe wé, helpe gé*, etc., for *helpað wé*, etc. A similar change sometimes appears in the perf., as, *hulpe gé*, for *hulpon gé*.

§ 86. In the pres. ind., 2d and 3d sing., the vowel *e* is generally omitted from the ending; as, *hilpst, hilpð*. This often causes phonetic changes, as, *cwist, cwið*, for *cwiðst, cwiðð*, from *cweðan*, to say; *hlest, hlet*, for *hledst, hledð*, from *hladan*, to load; *blétst*, for *blétest*, from *blótan*, to sacrifice; *ciest, ciest*, for *ciesst, ciesð*, from *céosan*, to choose.

§ 87. The letter *g* at the end of a root generally becomes *h*, unless it is followed by a vowel; as, *stihð, stáh*, from *stigan*, to mount. In the disyllabic forms of the perfect and in the passive participle, a final *h* of the root passes into *g*, a final *ð* into *d*, and in some verbs a final *s* into *r*; as, *slagen, cweden, coren*, passive participles of *sléan* (for *sla(h)on*), to strike, *cweðan*, to say, *céosan*, to choose. Final *h* of the stem is often syncopated in the present and infinitive; as, *sléan, séon*, for *sla(h)on*, to strike, *se(h)on*, to see. From *séon*, to see, come pres. *séo, siehst, siehð*, plur. *séoð*, perf. *seah, sáwe, seah*, plur. *sáwon*, pass. part. *sewen* or *sawen*.

§ 88. Verbs of Secondary Inflection (*Weak Verbs*). These form the perfect by adding *-de* to the root of the verb. They are divided into two classes, according as *-de* alone, or *-ode*, is added to the root. The passive participle is formed by adding *-d* and *-od* in the two classes, and often with *ge-* prefixed; as, *gelegd*, laid, *geárod*, honored, from *lecgan, árian: ge-* is also used, but not so frequently, in the passive participle of primary verbs.

§ 89. In the first of these two classes, *-de* after *c, t, h, s*, becomes *-te*, and *e* is then generally changed to *h*. Several verbs show a different vowel (*ea* or *o*) in the perfect from that of the present (*e, é*). Paradigm: —

§ 90. In the pres. ind., 2d and 3d sing., *e* is often omitted from the ending, with euphonic changes, as in verbs of primary inflection. The verb *ner-an*, to preserve, has *ner-e-st, ner-e-ð* it takes *e* also in the sing. of the imper., *ner-e*, in the whole perf. (as *ner-e-de*), and in the pass. part., has *ner-e-d*, but in all other forms has *i* before *a* or *e* (as, *neriað, neriende*, etc.) like verbs of the following second class. And the same is true of a few other verbs in which the stem is a short syllable; as, *derian*, to harm, *herian*, to praise.

Instead of *sécað* before a subject pronoun, we have also *séce*

§ 91. For the second class, we give as paradigm. —

§ 92. In these verbs, *-ie* is often written as *-ige*, and *-ia-* as *-iga-* or *-igea-*, where *g* has the sound of a consonant *y*, thus, *lufige, lufigeað*. Before *d* of the perf., *a* is sometimes written in the sing., and *e* in the plur., instead of the regular *o*

§ 93 The verb *lioflan*, to live, belongs to this class, but generally takes *libb-* in place of *luf-*, as, inf *libban*, part *libbende*, pres 1 *libbe*, 2. *liofast*, 3. *liofað*, pl. *libbað*, imp *leofa*, pl. *libbað*, perf *lifde* (late *liofode*), pass. part *gelifd* (*liofod*). § 94 Anomalous Verbs A. There are twelve preteritive verbs, in which an old perfect of primary formation came to be used in the sense of a present, after which a new perfect was added with secondary formation. These are *witan*, to know; *ágan*, to own, *dugan*, to avail, *unnan*, to grant, *cunnan*, to know, *þurfan*, to need; *durran* (inf not found), to dare, *sculan*, shall, should, *ge-munan*, to remember; *magan* (inf not found), may, might, *ge-nugan* (inf not found), to suffice, *mótan* (inf. not found), to be allowed We give, in five columns, the pres ind 1, 3 sing., the 2 sing., the plur, the pres. subj sing., and the perf ind 1, 3 sing, the 1., II., etc., refer to the corresponding classes of non-reduplicating strong verbs —

For *sie*, in the subj., are also used *si*, *sig*, *seo*, and *sỹ*; for *sien*, *sin* and *sỹn*.

In the pres. ind. 3. pl. the Northumbrian dialect has also *aron* (Mercian *earun*).

There is also a defective *beón*, to be, the present of which is generally used in a future sense.

(b) *Gán*, to go, defective, found in pres. 1. *gá*, 2. *gést*, 3. *gáŏ*; subj. *gá*; imp. *gá*, pl. *gáŏ*. From the same root come pres. *gange*; perf. *gieng*, *géong*, and *gengde*. The defective perf. *ẽode*, went, is used in prose instead of *géong*, etc.

(c) *Dón*, to do, makes pres. 1. *dó*, 2. *dést*, 3. *déŏ*, pl. *dóŏ*; subj. *dó*, pl. *dón*; perf. *dide* (or *dyde*); imp. *dó*, pl. *dóŏ*; part. act. *dónde*, pass. *ge-dón*.

§ 96. C. Several verbs which have the primary inflection in the perfect and the passive participle, appear in their other forms as verbs of secondary inflection. Thus, *biddan*, *bæd*, *bẽdon*, *beden*, ask, bid, *sittan*, *sæt*, *sẽton*, *seten*, sit, *licgan*, *læg*, *lẽgon*, *legen*, lie; *þicgan*, *þeah* or *þáh* or *þigede*, *þẽgon*, *þegen* (?), touch, taste, *hebban*, *hóf*, *hófon*, *hafen*, heave, lift; *swerian*, *swór*, *swóron*, *sworen*, swear.

From the contracted forms *fón*, to take, *hón*, to hang (Goth. *fāhan*, *hāhan*), come pres. 1. *fó*, *hó*; 2. *fést* (*fæst*, *fẽhst*); *hést* (*héhst*, *hæst*); 3. *féhŏ* (*fæŏ*, *fẽhŏ*); *héŏ* (*héhŏ*, *hæŏ*); pl. *fóŏ*, *hóŏ*. From the same roots come *fangan*, *hangan*, perf *féng*, *héng*.

The verb *bringan*, to bring, has two formations in the perf. and the pass. part. *brang*, *brungon*, *brungen*, and *bróhte*, *bróhton*, *ge-bróht*; *standan*, to stand, drops *n* in the perf. *stód*, *stódon*, *standen*: *bregdan*, to braid, *brægd*, *brugdon*, *brogden*, often drops the *g*, and lengthens the preceding vowel, *brédan*, *brẽd*, *brẽdon*, *bróden*: [*þíhan*], to thrive, *páh*, *þigon*, *þigen*, of the 1st class, has passed into the form of the 2d, *þéon*, *þéah*, *þugon*, *þogen*, and the same is true of [*síhan*] *séon*, to strain, [*tíhan*], *téon*, to convict, [*wríhan*], *wréon*, to cover.

§ 97. D. The following verbs of secondary inflection are irregular: *þencan*, to think, perf. *þóhte*; *þyncan*, to seem, perf. *þúhte*; *wyrcan*, to work, perf. *worhte*; *bycgan*, to buy, perf. *bohte*; *gearwian*, *gyrwan*, to prepare, *searwian*, *syrwan*, to *equip*, perf. *gyrede*, *syrede*, but pass. part. *gegyrwed*, *gesyrwed* *Búan*, to inhabit, perf. *búde*, but pass. part. *gebún* · from the same root come *búan*, *búwian*, of the second class.

§ 98. Missing Forms. The Anglo-Saxon has no future tense, but uses the present tense, both as a present and as a future. The verbs *sculan* and *willan* are sometimes used, as in English, to express the future, but generally not without the idea of volition or of necessity, which properly belongs to those verbs.

The perfect definite and the pluperfect are supplied, as in English, by using forms of *habban*, to have, with the passive participle of the verb.

The passive is supplied by using the auxiliary verbs *wesan*, to be, or *weorðan*, to become, with the passive participle. Thus, *eom* and *weorðe* are used for the present passive; *wæs* and *wearð* for the perfect; *bẽo* or *sceal bẽon* for the future; *eom — worden* for the perfect definite, and *wæs — worden* for the pluperfect.

PREPOSITIONS AND CONJUNCTIONS.

§ 99. Prepositions are used with the accusative, dative, and genitive: we give the simple prepositions, and some of the more important compound ones.

With the accusative: *geond*, beyond, throughout, through; *þurh*, through, by; *ymb* (*ymbe*), round, about; *abútan*, about; *ymbútan*, round about.

With the dative: *after*, after; *ær*, ere; *æt*, at; *be*, *bi*, by, concerning; *fram*, from; *néah*, near; *of*, of; *tó*, to; *intó*, into; *tóweard*, toward; *beæften* (*bæften*), behind; *beheonan*, on this side of; *betwix* (*betweox*), betwixt; *betwẽonum* (*betwynan*), between, *búfan*, above; *bútan* (*búton*), without, except; *wiðútan*, without; *wiðinnan*, within.

With the genitive: *andlang* (*ondlong*), along.

With the accusative and dative: *ofer*, over; *on*, *an*, *ón*, in, to; *in*, in, into; *óð*, unto; *under*, under; *beforan*, before; *gemang*, among; *ongéan* (*ongén*), against, toward, over against; *tó-gẽanes*, toward, against; *innan*, within; *uppon* (*uppan*), upon, *útan*, without. These generally take the accusative when motion *to* a place, the dative when rest *in* a place, is either expressed or implied. *Mid*, with, takes the accusative, the dative, and also the instrumental, which generally coincides in form with the dative. *For* takes the dative or instrumental in the sense of *for*, the accusative in the sense of *instead of*. Some of the prepositions mentioned above as taking the dative are occasionally found with the accusative.

With the accusative, dative, and genitive: *wiŏ*, with. Some other prepositions occasionally take the genitive.

§ 100. The most important conjunctions, etc., are *ac*, but; *and*, and; *búton* (*bútan*), unless; *éac*, also; *elles*, else; *gé*, and; *géa*, *gise*, yea, yes; *gif*, if; *húru*, at least, yet; *hwæt*, low, truly, *hwæðer*, whether; *né* (*ne*), not; *ná*, *nó*, *nese*, not, nay, no; *nú*, now, *oððe*, or; *swá*, so, as, *swilce*, as if; *þæt*, that; *þéah*, though; *þonne*, then, than; *uton* (with infin), let us; — *for þám þe*, because; *for þý*, therefore; *mid þý*, since, seeing; *tó þám þæt*, in order that; *þy lés þe*, lest; — *gé . . . gé*, both . . . and, *ægðer gé . . . gé*, both . . . and; *hwæðer þé . . . þé*, whether . . or; *náðer né . . . né*, neither . . . nor; *oððe . . . oððe*, either . . . or; *sam . . . sam*, whether . . . or; *swá . . . swá*, so as, as.

SEMI-SAXON INFLECTION.

§ 101. For the sake of convenience, A. will be used for the earlier text of Layamon B. for the later, and O. for the Ormulum. It is proposed to represent chiefly the inflection of A. in its characteristic features, adding at the same time the principal variations of B. and O.

§ 102. The Semi-Saxon retains in A. the two Anglo-Saxon characters for *th* (ð and *þ*); we represent them by *th*. B. and O. have only *þ*. Besides the ordinary Roman *g*, the Semi-Saxon uses the Anglo-Saxon *g* (*ȝ*). The former sign presents no difficulty, being for the most part equivalent to our hard *g* (in *go*). *ȝ*, however, is used in various ways. When initial, it is equivalent to our consonant *y* (in *young*); when not initial, it is often equivalent to *y* (sometimes even vocalic), but often represents a guttural sound, probably that of *g* in *sagen* (as pronounced in North Germany). The use of the character is different in different MSS In O. *ȝ* seems to be usually a consonant *y*, while *ȝh* is used to express the guttural sound just indicated; but *ȝ* is also used instead of *i* in diphthongs. Instead of *ȝ*, a *w* is often used in B. and sometimes in A. Thus, B. has *Laweman* for *Laȝamon*. In Semi-Saxon, as in English, the Anglo-Saxon *hw* is written *wh* (yet in B. simply *w*). It must be remembered in regard to the Ormulum, that by a uniform peculiarity of orthography, a consonant is doubled where the vowel before it in the same word is short.

§ 103. If we compare the Semi-Saxon inflection with the Anglo-Saxon, we find, as the most striking difference, that the vowels *a*, *o*, *u*, in the old grammatical endings, are all changed to *e*. Thus, the AS. *fiscas*, fishes (dat.), *fiscum*, to fishes, *cearu*, care, *oxan*, oxen, *lufodon*, they loved, become in Semi-Saxon *fisces*, *fiscen*, *care*, *ozen*, *lufeden*. In A. the vowel *a* is occasionally found in grammatical endings, but irregularly and capriciously used. Next to this substitution of *e* for *a*, *o*, *u*, the most important differences are caused by the frequent loss of the final *n*. thus, *mid greatere heorte* (AS. *mid gréatre heortan*), with great heart, *tha heye men* (AS. *þá héahan men*), the high men. The commencement of this change is seen in A., where the final *n* is occasionally dropped from many forms, yet not wholly discarded from any, and, as a natural consequence, it is sometimes added to forms that have no right to it; thus, in the dat. sing. of the vowel declension, *than kingen* (AS. *þám cyninge*), to the king; in feminines of the vowel declension through most of the cases, as, *laȝen* (AS. *lagu*, *lage*, *laga*), law, laws; in the nom. sing. of adjectives in *e*, as, *he wes blithen* (AS. *hé wæs bliðe*), he was blithe; and in the singular of verbs after *e*, as, *ic habben* (AS. *ic hæbbe*), I have, *he senden* (AS. *hé sende*), he sent. In B. and O., where the omission of a final *n* is more fixed and regular, that letter is hardly ever misapplied in this way.

SUBSTANTIVES.

§ 104. It is sometimes the case, even in A., that the accusative, both singular and plural, is used in place of the dative; as, *than king* (for *than kinge*), to the king, *of kinges* (for *of kingen*), of kings. In B. this is much more frequent; for the plural, at least, it is the prevailing usage. In O. it is the general rule: though the *-e* of the dat. sing. after a preposition is sometimes retained where the verse favors it (as *to kinge*), yet it is oftener omitted; and the inflection, sing. nom. dat. acc. *king*, *name*, gen. *kingess*, *namess*, pl. nom. gen. dat. acc. *kingess*, *namess*, is the usual one for substantives of all classes and genders. The gen. pl. in *-es*, as *kinges*, occurs also in A & B.

§ 105. Vowel Declension. The normal forms for the **Masculine** are: —

	Sing.	Plur.	Sing.	Plur.
Nom.	*king*	*kinges*	*mete*	*metes*
Gen.	*kinges*	*kinge*	*metes*	*mete*
Dat.	*kinge*	*kingen*	*mete*	*meten*
Acc.	*king*	*kinges*	*mete*	*metes*

But in the gen. pl., the more common ending is *-ene* (or *-en*); as, *kingene* (or *kingen*), for *kinge*. (Compare late AS. *dagena*, for *daga*, of days.) For dat. pl. *kingen*, occurs also, in B., *kinge*, with omitted *-n*; and in A., for dat. sing. *kinge*, occurs also *kingen*, with *-n* irregularly added. A few words show in the nom. acc. pl. the ending *-en* (or *-e*) irregularly brought in from the N declension.

For the use of the acc. in place of the dat. which is common in B. and O., and for the gen. pl. in *-ess* which is common in O., see § 104.

§ 106. *Sune*, son, has in A. gen. sing. *sune*, and *sunen* (*sonen*) is found in the nom. acc. plur.; *wude* (B. *wode*), wood, has nom. acc. plur. *wudes* or *wude*; but otherwise they are regular. *Man* (or *mon*), gen. *mannes*, makes *men* in the nom. acc. (and sometimes the dat) pl., but not in the dat. sing.; the gen. pl. is *monne* (A. B.), *monnene* (A.), and *mannen* (*e*) (B.). O makes sing. nom. dat. acc. *mann*, gen. *manness*, pl. nom dat. acc. *menn*, gen. *menness*.

§ 107. The **Neuters**, as in AS., are declined like the masculines, except in the nom. acc. pl. here they are either without ending; as, *wif*, wife, wives; *lond*, land, lands, or they take *-en* (rarely *-e*), as in the N declension, as, *wifen*, *londe*. But sometimes the ending *-es* of the masc. is applied to the neut., as, *wifes*, *londes*. In B this is more common, and in O. it is the general rule, yet even O. makes *shep*, sheep, in the pl. as in the sing., while from *deor*, animal, it makes pl. *deor*, *der*, and *deoress*. From *child* come nom. acc pl. *children* (also *childre* in A., *childres* in B.), gen. *childrene*, dat. *children*. O. makes *childre* as pl. of *child*, and *lambre* of *lamb*.

§ 108. For **Feminines** the normal forms would be: —

	Sing.	Plur.	Sing.	Plur.
Nom.	*laȝe*	*laȝe*	*dede*	*dede*
Gen.	*laȝe*	*laȝen(e)*	*dede*	*dede*
Dat.	*laȝe*	*laȝen*	*dede*	*deden*
Acc.	*laȝe*	*laȝe*	*dede*	*dede*

For *n* added in A. after final *e*, see § 103. Where the nom. sing. ended originally in a consonant, *e* is generally added to it; as, *dede*, for AS. *dæd*, and the suffixes *-inge*, *-nesse*, for AS. *-ing*, *-nes*. The nom. acc. pl. have also the masc. ending *-es*: this is rare in A., but common in B., and nearly universal in O.: thus, B. *lawes*, *dedes*, O. *laȝhess*, *dedess* (rarely *dede*). *Boc*, book, makes *boc* in dat. acc. sing., and nom. acc. pl.; but *bæc* also occurs in nom. acc. pl.: B. has *boke* in dat. sing., and *bokes* in nom. acc. pl. *Burh*, town, castle, makes gen. dat. acc. sing. *burh* or *burȝe* (*burhȝe*), nom. dat. acc. pl. *burȝes* (*burhȝes*) or *burȝen* (*burhȝen*), gen. *burȝe*: but in B. the gen. dat. sing. is *borewe*, and the whole plural *borewes*. *Weorld*, world, sometimes makes the gen. in *-es*.

§ 109. N Declension. The normal forms would be: —

	Masc.		Fem.	
	Sing.	Plur.	Sing.	Plur.
Nom.	*stede*	*steden*	*heorte*	*heorten*
Gen.	*steden*	*steden*	*heorten*	*heorten*
Dat.	*steden*	*steden*	*heorten*	*heorten*
Acc.	*steden*	*steden*	*heorten*	*heorten*

§ 110. But this declension is much disfigured by the omission of the final *-n*, which is frequent in **A.**, and nearly universal in **B.** For *-n* sometimes added in **A.** to the nom. sing., see § 103. In **B.** the gen. sing. is sometimes, and the nom. acc. pl. are commonly, made in *-es*, the masculine ending of the vowel declension; as, *stedes*, steeds, *heortes*, hearts, *drakes*, dragon's; but *-e* is also found in the plur., as *teone*, sorrows. The gen. pl. has, besides *-en*, sometimes *-ene*, sometimes *-enen*: thus, *gumene*, or *gomenen* (**A.**); *-ene* is regular in **B.** In **O.** the peculiarity of this declension is wholly lost, as we see in *name*, gen. *names*, dat. acc. *name*, pl. *names* in all cases. Yet from the neut. *eȝhe*, eye, gen. *eȝhes*, O. makes the irreg. pl. *ehne*. In Layamon the word occurs generally in the plur. (*eȝen*, *eȝene(n)*), but a dat. sing. *eȝen* (*eȝe* **B.**) is also found.

§ 111. *Feond* and *freond* make in nom. acc. pl. *feond*, *freond*, or *feondes*, *freondes*, or *feonde(n)*, *freonde(n)*.

§ 112. *Fader*, *moder*, *brother*, *suster*, *dohter*, have the same form through the sing., and in the gen. pl.; but the dat. sing. sometimes takes *-e*, and the gen. pl. sometimes *-ne* or *-en*. The other plural cases have *-en* (*-es* in **B.**, *-ess* in **O.**). But for *broth(e)ren*, we find also *breth(e)ren*; and in **O.** *brethre* is the only plural form of *brotherr*. The *e* in *brother*, *suster*, *dohter*, is often lost before a case ending.

§ 113. The fem. nom. acc. *niht*, night, has *nihtes* in the gen. sing., *nihte* in the dat.: the pl. is regular in **A.**, but in **B.** is sometimes indeclinable, *niht* or *nitht*. The fem. *æ*, running water, and *æe* (**B.** * séé*), sea, are indeclinable in the singular.

§ 114. In proper names of men, the genitive *Caper his*, for *Caperes*, is sometimes found in **A.**, oftener in **B.**: that *his* here is no real pronoun, is evident from the want of any genitive feminine similarly formed with *hire*.

ADJECTIVES.

§ 115. For the **Indefinite Declension** the normal forms would be: —

	Sing.			Plur.
	Masc.	Fem.	Neut.	
Nom.	*god*	*god*	*god*	*gode*
Gen.	*godes*	*god(e)re*	*godes*	*god(e)re*
Dat.	*goden*	*god(e)re*	*goden*	*goden*
Acc.	*godne*	*gode*	*god*	*gode*

§ 116. For the **Definite Declension** they would be: —

	Sing.			Plur.
	Masc.	Fem.	Neut.	
Nom.	*gode*	*gode*	*gode*	*goden*
Gen.	*goden*	*goden*	*goden*	*goden(e)*
Dat.	*goden*	*goden*	*goden*	*goden*
Acc.	*goden*	*goden*	*gode*	*goden*

§ 117. For *-n* sometimes added in **A** to forms with final *-e*, see § 103. On the other hand, *-n* is often omitted in **A** from forms with final *-en*, as *gode* for *goden*, and this is uniformly the case in **B.** The endings *-es* and *-re* in the gen. sing. and pl are little used in **B.**, the forms *gode* and *god* being used instead By these changes, the difference between the definite and indefinite declensions became much less distinct, and it is not therefore surprising that, even in **A**, the one is sometimes used instead of the other: with the definite article, the definite forms are almost always used, but with other adjective pronouns and with the possessive genitive the indefinite forms are not uncommon.

§ 118. In **O.** the indefinite adjective has only the forms *god* for the sing, and *gode* for the pl.; the definite only the form *gode* (and very rarely a form in *-en*). Adjectives in *-e*, as *clene*, clean, are therefore without inflection. But the gen pl *allre*, of all, is still found with the superlative; as, *allre firrst*, first of all.

§ 119. The comparative ends in *-re*, and has only definite inflection The superlative ends in *-est*, and is inflected both ways; but the indefinite superlative is undeclined in the sing., and takes only *-e* (in **A.** also *-en*) in the pl

§ 120. Adverbs are formed from adjectives as in Anglo-Saxon: thus, *swithe*, strongly, very, from *swith*; *hæhliche* (O *hehlike*), highly, *rather*, sooner.

PRONOUNS.

§ 121. The personal pronouns of the first and second persons are declined in sing., dual, and pl. as in Anglo-Saxon. The genitives are nearly confined to the possessive use. The dual forms, though found in O, are unused in **B.** We have in **B** *ȝou*, *ou*, and in **O.** *ȝuw*, for *eow*, *eou*, in O *ȝunnc* for *inc*.

§ 122. The pronoun of the third person is thus declined: —

	Sing			Plur.
	Masc.	Fem.	Neut.	
Nom.	*he*	*heo* (*ȝeo*, *ȝe*)	*hit*	*heo*, *hi* (*hiȝ*)
Gen.	*his*	*hire*	*his*	*heore* (*hire*)
Dat.	*him*	*hire*	*him*	*heom* (*ham*, *ȝam*)
Acc.	*hine*	*heo* (*hire*)	*hit*	*heom* (*ham*, *ȝam*)

The forms in ( ) are found in **B.**, but not in **A.** **B.** also often uses *him* for *hine*. The nom. pl. is almost always *heo* in **A.**, *hiȝ* or *hi* in **B.** Rare forms for the nom. acc. pl. are *theo* in **A.**, *thaie* in **B.** **O.** has in the nom. sing. fem. *ȝho* (i. e., *hyo*), neut. *itt*, in the acc. sing. masc. *himm*, fem. *hire*, neut *itt*, in the pl nom. *theȝ* (i. e., *they*), gen. *theȝre* (i. e., *theyre*) and *heore*, dat. acc. *theȝm* (i e, *theym*) and *hemm*.

§ 123. The possessive pronouns *min*, my, *thin*, thy, are declined as indefinite adjectives. Before a consonant *min*, *thin*, sometimes become *mi*, *thi*: *mire*, *thire*, take the place of *minre*, *thinre*. But for all the forms with case endings, **B.** has only *mine*, *thine*. The other possessives, *unker(e)*, our (of two), *inker(e)* (O. *ȝunnkerr*), your (of two), *ure* or *oure*, our, *ower* or *eow(e)re* (**B.** *ȝoure*, *ȝure*, O. *ȝure*), your, are undeclined. In **O.** *hiss*, his, is treated as an adjective, with pl. *hisse*.

§ 124. The indefinite article *an* — which is only the numeral "one" applied to this use — is declined, both in **A.** and **B.**, with the same peculiarities as *min*. **B.** often uses *on*, *one*, for *an*, *ane*; but when *n* is dropped, it has *a*, never *o*. A genitive *anes* is also found in **B.**, and a gen. *anes* and dat. *ænne* are met with in **O.**

§ 125. The definite article is thus declined: the forms in quotation marks are found only in **A.**

	Sing.			Plur.
	Masc.	Fem.	Neut.	
Nom.	*the*	'*tha*,' *the*	*that*	'*tha*,' *the*
Gen.	*thes*	'*there*,' *thare*	*thes*	'*there*,' *thare*
Dat.	*than*	'*there*,' *thare*	*than*	'*than*'
Acc.	*thene*	'*tha*,' *the*	*that*	'*tha*,' *the*

The variations, most of them orthographical, are numerous: thus, in **A.**, *thæ* for *tha*; *thæt*, *thet*, for *that*; *thæs*, *thas*, for *thes*; *thære* for *there*, etc.: in **B.**, *this* for *thes*: in both, *thon* for *than*, *thane* for *than* and *thene*. Add *theo* for sing. *tha*, and *thare* for pl. *tha*.

The form *the* is sometimes used in **B.** as an indeclinable article for all cases and numbers. Traces of this use are found even in **A.** In **O.** it is general; though the antecedent of a relative pronoun takes, instead of *the*, a demonstrative, *thatt*, *tha*, or *thiss*, *thise*.

§ 126. The demonstrative *thes* is thus declined: —

	Sing.			Plur.
	Masc.	Fem.	Neut.	
Nom.	*thes*	'*thas*,' *theos*	*this*	'*thas*,' *theos*
Gen.	*thisse(s)*	*thisse(re)*	*thisse(s)*	*thisse(re)*
Dat	*thisse(n)*	*thisse(re)*	*thisse(n)*	*thisse(n)*
Acc.	'*thesne*,' *thisne*	'*thas*,' *theos*	*this*	'*thas*,' *theos*

For *thas*, which is confined to **A.**, we find *theos* and *thes* in both **A.** and **B.** For *thisses*, *thissere*, *thissen*, **B.** has almost always *thisse*. For most of the forms, **B.** has also *this* used as an indeclinable demonstrative, and traces of this use are found even in **A.**

O has sing. *thass*, this, pl. *thise*, these, while it makes also sing. *thatt*, that, pl. *tha*, those, approaching nearly to the later English usage.

§ 127. *Swile* or *swulc* (**B.** *soch*), such, is declined as an indefinite adjective. *Ilk*, declined with the definite article, is used for "the same."

§ 128. The interrogative pronoun *wha*, who? makes gen. *whes* (only in **A.**), dat. and acc *wham*, *whan*, neut nom acc. *what* These in **B.** are spelled *wo*, *wam*, *wan*, *wat* O. uses *whamm* as dat acc sing. The use of this pronoun as a proper relative begins to appear in **B** and O. *Whather* (**B** *wather*) is undeclined *While* or *whule* is declined as an indefinite adjective. in **B** it is written *woche*, and begins to be used as a relative.

§ 129. The relative pronouns in **A.** are *the* and *that*, for all genders and numbers, the latter being especially used in reference to an indefinite or an omitted antecedent, also *tha* (more rarely *theo*), in reference chiefly to a feminine or a plural. In **B** and **O.** *that* has taken the place of all the rest, and become the general relative.

VERBS.

§ 130. General Remarks. In the inflection of the verb, the final *-en* of the infinitive, the plural forms, and the passive participle, often loses the *-n* in **A.**, generally so in **B.**, but rarely in **O.** For *-n* added in **A.** to forms that end in *-e*, see § 103

§ 131. In **A** and **B** the plural of the present indicative ends in *-eth* (AS *-aþ*) But in **O.** it has the ending *-enn*, which came in, probably, from the subjunctive and the perfect, as, *we hellpenn* (**A B** *wé helpeþ*), we help. The Anglo-Saxon use of *-e* instead of *-aþ*, when the verb is followed by a subject pronoun, — as, *helpe uḗ*, — appears also in the Semi-Saxon The form of the verb in the plural of the pres. ind. affords a convenient criterion for dialect. South English has the ending *-eth* (*helpeth*, AS *helpaþ*), the Midland dialect has *-en* (*helpen*), the Northern, *-es* (*helpes*) In the Semi-Saxon period we have, as has already been remarked, nothing preserved in the Northern dialect.

§ 132. The dative of the infinitive in *-enne* (or *-ene*), with the preposition *to*, — as, *to helpenne*, — is occasionally found in **A** and **B**, rarely in **O** It is sometimes written with *-ende* for *-enne*, by a confusion with the active participle. But commonly the preposition *to* is prefixed to the infinitive in *-en*; as, *to helpen*.

§ 133. The active participle is singularly infrequent in the Semi-Saxon; and partly perhaps on this account became confounded with the verbal substantive in *-inge*. In **A** the old termination *-ende* (or *-inde*) is still the prevailing one for the participle; but in **B** *-inge* occurs about as many times as *-ende*

§ 134. The passive participle very frequently takes the prefix *i-* (AS *ge-*), which, however, is not confined to the participle. thus, *iboren* (AS *geboren*) - *boren*, born. But this prefix is scarcely at all used in **O.**

§ 135. Verbs of Primary Inflection (*Strong Verbs*). The classes of the Anglo-Saxon are more or less confounded, as will appear from the following specimens. We give the infinitive, the singular of the perfect, the plural of the perfect, and the passive participle. The vowels are given (when possible) according to **O.**, where they are written more consistently than in **A.** and **B.**

Most of these forms appear also in A. and B, but accompanied often by other modes of spelling. Thus, in some cases, *o* is used for *a*, and *eo* for *e*, as, *fond, bigon, nom, draf, wrot*, for *fand*, etc., *weox, weopen*, for *wex, wepen*, *holde, cnowe*, B., for *halden, cnawen*. In B., *ð* is used for *æ*, and sometimes *ea* for *a*, as, *hewe, ȝeaf*, for *hæwen, ȝaf*. In A, *a, æ, e*, are much confounded, as, *halden, hælden, helden*.

EARLY ENGLISH INFLECTION.

§ 147. The periods in the history of our language which are known as the Old English and the Middle English differ chiefly in the vocabulary, in grammatical points they are not so far unlike as to require a separate treatment. One can be briefer here, as the inflectional system is now reduced more nearly to its modern proportions, and in the Ormulum, which, though written about 1200, stands, by virtue of its more northern dialect, farther than Layamon from the Anglo-Saxon, we have already seen much of what is most striking in early English inflection The object will be to represent especially the language of Chaucer in its characteristic features.

§ 148. It must be observed at the outset, that the unaccented final *-e*, which is silent in modern English, was generally pronounced by Chaucer. A multitude of apparent exceptions are accounted for by noticing these two peculiarities in the poet's verse: 1. The unaccented final *e* generally unites in one syllable with a vowel at the beginning of the next word, and this union takes place, even when the next word is a pronoun or adverb with initial *h-*, or a form of the verb *to have*. 2. An unaccented final *-er* is often treated as a part of the preceding syllable, its *e* being suppressed, especially where a vowel or *h* follows in the next word; and sometimes an unaccented final *-en* or *-eth* is treated in the same way. Many of the exceptional cases are undoubtedly attributable to variations and corruptions introduced by the transcribers.

SUBSTANTIVES.

§ 149. Nominative Singular. Where the Anglo-Saxon had a final vowel (*a, e, o, u*) in the nom. sing, the early English (like the Semi-Saxon) has *-e;* as, *oze, herte, ere, herde, lawe, elde* (AS *ora*, ox, *heorte*, heart, *éare*, ear, *hierde*, (shep)herd, *lagu*, law, *ieldu*, age). Even where the Anglo-Saxon had a final consonant, most feminine words have an added *-e*, as, *dede, sorwe, youthe* (AS *dæd*, deed, *sorh*, sorrow, *geoguð*, youth), but the verbals in *-ynȝ* do not generally add *-e;* as, *connyng*, less often *connynge*, cunning. An unorganic *-e* is also found in the nominative of some masculines and many neuters thus, *weye* (but also *wey*), *dale*, etc. In Chaucer these final *-e's* are not unfrequently suppressed in pronunciation, and occasionally, after two consonants, in writing thus, *herte* is sometimes treated as one syllable, and sometimes written *hert*

§ 150. Genitive Singular. The gen. sing. ends in *-es*. as, *kinges, names*, from *king, name*. In Chaucer the *-es* is almost always a separate syllable. Genitives

without *-es* are sometimes found, in accordance with earlier modes of inflection; as, *myn herte blood, his lady grace, his fader hous;* but *heven king*, AS. *heofon-cyning*, is properly a compound word.

§ 151. Dative and Accusative Singular. The acc. sing. is always like the nom.; the dat. sing. is usually so. But where the nom. ends in a consonant, a dative in *-e* is often found with prepositions, especially at the end of a line in verse, as, *to bedde, with golde, in house, out of his sleepe*, from *bed, gold, hous, sleep.*

§ 152. Plural. The plur. has *-es* in all the cases; as, nom. gen. dat. acc. *kinges, dedes, shippes, wyfes, names, hertes* (AS. nom. pl *cyningas, dǽda, scipu, wif, naman, heortan*). In Chaucer the plural often ends in *-s* alone (or *-es* pronounced as *-s*), especially where two or more syllables precede; as, *shoos, pilgryms, lovers, frankeleyns, servantes* (pronounced *servánts*) Some words still retain the plural of the old N declension, as, *oxen, eyen* (eyes), *asshen* (also *asshes*), *shoon* (also *shoos*), etc.; while some others take *-n* by mistaken analogy, as *bretheren, sustren* (also *sustres*), *children* (also *childre* or *childer*), *kyn* (kine), etc. Some words, which were of neuter gender in the AS., make the plur. like the sing.; as, pl *deer, good, sheep, swin* (swine), *folk* (or *folkes*), *hors* (or *horses*), *thing* (or *thinges*), *yer* (or *yeres*). The plurals with change of vowel are *feet, gees, men, teeth*, etc, as in modern English.

§ 153. If the ending *-es* (or *-s*) is not used in the nom pl, it is added to form the gen. pl.; as, *folkes wyves, mennes soules, wymmens counseiles.*

ADJECTIVES.

§ 154. Adjectives are inflected as in the Ormulum: the pl. of the indefinite adjective and both numbers of the definite end in *-e;* as, *yong man, yonge men, the yonge man, the yonge men.* In Chaucer this inflection is almost confined to monosyllables; nearly all adjectives of two or more syllables, and of course all adjectives that end in *-e*, are uninflected In occasional instances the indefinite adjective takes *-e* in the sing., especially after prepositions or before names of persons. On the other hand, *-e* of the indefinite plural is sometimes omitted when the adjective is a predicate, as, *they were glad* · the predicate participle is almost always undeclined

§ 155. Chaucer has a remnant of the old gen pl indef in *aller* or *alther*, of all, as, *at your alther cost, alther best.*

§ 156. The comparative and superlative are formed as in modern English Superlatives of one syllable are inflected, as, *the beste man, his laste word* Change of vowel is seen in *lenger*, from *long, strenger, strengest*, from *strong, elder, eldest*, from *old.*

§ 157. Adverbs are formed from adjectives as in the earlier language either with the ending *-e*, as, *brighte, faire, harde, longe*, from *bright, fair*, etc or with the ending *-ly* (AS *-lice*, Semi-Saxon *-liche, -like*), as, *shortly, sothely, sikurly, specially*, from *short, soth*, etc.

PRONOUNS.

§ 158. In the first person, Chaucer has *I*, rarely *yk* and *ich* (for AS *ic*, which is still found in Old English). *Yk* and *uh* are probably due to the copyists. In the second person, he has *thou, ye, you* (which are found also in Old English), for AS. *þú, gé, éow.* The dual forms are no longer met with In the third person, he has—

	Sing.			Plur

Gen.	*his*	*hire*	*his*	*here*
Dat.	*him*	*hire*	*him*	*hem*
Acc	*him*	*hire*	*it*	*hem*

The forms *hire* and *here* were probably pronounced *hir, her*, and were sometimes written so. In the Old English we still find *heo* in the nom sing fem, and *heo* or *hi, hí*, in the nom plur.

§ 159. Reflexives are made in Chaucer by adding *self*, or *selve*, or *selven*, to *my, thy, him, hir, our, your, hem*, as, *myself, myselve, myselven*, etc

§ 160. The possessives *myn, thyn*, in Chaucer, retain *n* before a vowel or *h*, sometimes before other consonants they retain it also when used absolutely, i e, after the substantive, or without a substantive, or as predicates, in which cases, too, they admit of inflection, as, *children myne, thin be the glorie, neghebour of myne* The possessives *oure, youre*, are pronounced *our, your*, and are sometimes written so when used absolutely, they usually take *-s*, *ours, yours* (in two syllables). *Hire*, her, and *here*, their, have the same absolute form (*heres*)

§ 161. Among the forms of the definite article which we have seen in the Semi-Saxon, there are some that appear occasionally and irregularly in Old English, but the one form *the* is generally, and at length constantly, used for all genders and numbers. The indefinite article *an* gives up its *n*, except before a vowel or *h*

§ 162. The demonstratives in Chaucer are sing *that*, pl *tho*, and sing *this*, pl. *these* (pronounced as one syllable, and sometimes written *thes, this*) *That*, in *that oon, that other*, sinks from a demonstrative to a mere article

§ 163. The interrogatives are *who, what, whos, whom, which, whether*, used as in modern English.

§ 164. The common relative in Chaucer, as in the Ormulum, is *that* for all numbers and genders. Instead of *that*, we sometimes find *which that*, as, *Creon, which that was of Thebes king Which* itself, or *the whiche*, is used as a relative, but chiefly after prepositions or in agreement with a substantive following. We find also *who, whos, whom*, used as relatives, but they are comparatively rare

VERBS

§ 165. The verbs of primary inflection (*strong verbs*) are now greatly reduced in number, many which once belonged to this order having taken up the secondary (weak) inflection. In those which remain, the classes have become much obscured and confounded, as will be evident from the following examples, in which are given, as before, the infinitive, the singular of the perfect, the plural of the perfect, and the passive participle:—

We also find *slepte, wepte, crepte*, secondary perfects for *sleep, weep, creep;* also, *fond, bigon*, for *fand, bigan*, and *fonden* for *founden* In the forms of *waxen, a* and *e* are much confounded, and a participle *woxen* is met with. Chaucer and others often use *y* for *i*, as, *fynden, bygynnen, dryven*, or *e* for *i*, as, *yeven.*

§ 166. Final -n. In the inflection of the verb, the final *-n* of the infinitive, the plural forms, and the passive participle, is omitted with great freedom. thus, *to maken* or *to make, we knowen* or *we knowe, they sayden* or *they sayde, founden* or *founde* An unaccented *e*, before the omitted *n*, is generally sounded in Chaucer, but was sometimes dropped in pronunciation, and occasionally so in writing, as, *to let, they sayd.*

§ 167. Present Indicative. The first person singular still ends in *-e*, which in Chaucer is generally sounded, as, *I saye, I knowe* The *-est* (or *-st*) of the second person singular occasionally drops the *t*, as, *thou ne has* (for *hast*) The third person singular ends in *-eth*, from which *e* is sometimes omitted, as, *telleth, cometh.* The 3d sing in *-es* or *-s* is not frequent in Chaucer. Where the root ends in *-t* or *-d*, contraction generally occurs, as, *sit* for *sitteth, byt* for *byddeth, stant* for *standeth;* and in like manner *rist* for *riseth* In the plural the old ending *-eth* is still found in Chaucer, as, *we loveth*, but the common termination is *-en* (or *-e*), as, *we loven* (or *love*)

§ 168. Perfect Indicative. Verbs of primary inflection make the second person singular like the first and third, as, *thou bar, thou spak, thou swor*, but a few instances show the old ending *-e;* as, *thou were, thou yave*, and a few others show the secondary *-est*, as, *thou knewest* The plural has *-en* (or *-e*).

§ 169. Verbs of secondary inflection add *-de* to the root, either immediately, as *sayde, answerde*, or with a connecting *e*, as *weddede, servede* In the former case, *-de* after *p, k, t, s*, or *gh*, becomes *-te*, as, *kepte, mette, laste alighte-de* is changed to *alighte, fast-de* to *faste, send-de* to *sende* or *sente, went-de* to *wente*, and the like For other changes, see § 181 The final *-e* of the 1st and 3d sing is often dropped, as, *seyd, loved, went* The 2d sing has *-est*, the plural *-en* (or *-e*)

§ 170. Subjunctive The subjunctive in both tenses has *-e* in the three persons of the singular, and *-en* (or *-e*) in the plural

§ 171. Imperative. The singular of the imperative is the same as the root of the verb, as, *spek* (speak), *ber* (bear), *com* (come), *yif* (give) But verbs which have *-ede* in the perfect take *-e* in the imperative, as, *love, aske*, and this is true of some others also, as, *byginne, telle* The plural ends in *-eth* (or *-th*), as, *cometh, draweth, saith, goth, beth* but in Chaucer this ending is occasionally reduced to *-e*, as, *holde* (for *holdeth*), and is frequently omitted altogether, as, *tel* (for *telleth*), *tak* (for *taketh*), *let* (always for *letteth*)

§ 172. Infinitive. The infinitive ends in *-en* (or *-n*), but often drops the final *-n*, as, *helpen, yiven, don, ben*, or *helpe, yive, do, be* A few forms in Chaucer, like *to doone, to sayne*, appear to come from the old dative case of the infinitive

§ 173. Participles. The old ending for the active participle, AS *-ende*, Semi-Saxon *-inde*, is still found in the Old English, as, *wepinde*, weeping. But it yields more and more to the termination *-inge* or *-ing* (in Chaucer *-ynge* or *-inge*), which, in the Anglo-Saxon and other Teutonic languages, belongs solely to abstract nouns of action The isolated forms in *-and* found in Chaucer are doubtless due to the scribes

§ 174. The passive participle of primary inflection freely gives up the final *-n*, as, *comen* or *come, songen* or *songe* It is thus often omitted in Chaucer from participles that always have it in modern English, as, *yiven* and *yive, gon* and *go, ben* and *be* The prefix *i-* or *y-* (AS *ge-*) is often used by Chaucer before this participle, as, *i-maked* or *i-maad, y-brent* (burnt), *i-writen, y-corve* (carved), *i-be* (been), seldom before other forms of the verb

§ 181. C. Several verbs of secondary inflection have in the perfect and the passive participle a vowel different from that of the present stem: thus, *sellen* makes *solde, sold, tellen, tolde, told, cacchen, caughte, caught, techen, taughte, taught, rechen* (reach), *raughte, raught; recchen* or *rekken* (reck), *roughte, rought; strecchen, straughte, straught, sechen* or *seken, soughte, sought; beyen, boughte, bought; bringen, broughte, brought, thinken, thoughte, thought; werken, wroughte, wrought.* From *fecchen* (fetch) comes an irregular pass. part. *fet.*

§ 183. *From an interpolation made by King Alfred in his translation of Orosius (the extract here given is preserved in a contemporary MS, and therefore gives a trustworthy representation of the West Saxon dialect of the ninth century).*

Translation — Ohtere said to his lord, king Alfred, that he dwelt farthest-north [northmost] of all Northmen. He said [quoth] that he dwelt in the land northward along the West Sea. He said, though, that that land extended [was] far [long] north from there, but it is all waste, except that in a few places here and there Finns live, hunting [in hunting] in winter and in summer fishing [in fishing], by that sea. He said that he on one occasion wished to explore how far that land extended due north [how long that land lay north-right], or whether any man dwelt north of the waste.

§ 184. *From the Anglo-Saxon version of Matthew (about the year 1000), eighth chapter, verses 1–10.*

Translation. — [Words wanting in the original are introduced in Italics explanations or kindred words are inserted in brackets] Soothly when the Savior from the mountain came-down, there followed him *a* great multitude [mickle many] Then came-near a leper to him, and him (self) to him humbled, and thus said [quoth], Lord, if thou wilt, thou mayest me cleanse. Then stretched-out the Savior his hand, and touched him, and thus said. I will, be cleansed. And his leprosy was quickly cleansed. Then said the Savior to him Beware [warn thee] that thou it to no man say, but go show thee to-the priest [Lat sacerdos], and bring him the gift that Moses bade, for their information Soothly when the Savior went-in to Capernaum, there came-near him an hundred's chief [elder], him begging [bidding], and thus saying. Lord, my boy [knave] lieth in my house lame [paralytic], and with evil afflicted. Then said the Savior to him *I will* come and him heal. Then answered the hundred's chief and thus said Lord, I am not worthy that thou go-in under my roof [thatch]; but say thy one word, and my boy will-be healed. Soothly I am a man under authority set, and I have servants [thanes] under me; and I say to this, Go, and he goeth, and I say to *an* other, Come, and he cometh, to my servant, Work this, and he worketh *it* Indeed, when the Savior this heard, then wondered he, and said to those that followed him Sooth I say to-you, I have not met [ne met I] so much faith [belief] in Israel.

Translation. — A. D 1087. — . . This *being* thus done, the king William returned again to Normandy *A* rueful thing he did and *a* ruefuller befel him. How ruefuller? He [lit, to him] grew-ill, till that *it* strongly ailed him. What may I tell? The sharp death, that *does* not let-pass neither rich men nor poor, this took him. He died in Normandy on the next day after the nativity of St. Mary; and men [man] buried him in Caen at St. Stephen's minster; earlier he up-reared it, and afterward [asthence] manifoldly enriched [conferred-*goods*-on] *it*. Alas! how loose and how unstable is this mid-world's weal! He that was earlier powerful king and many *a* land's lord, he had-not then of-all land but seven feet measure; and he that was whilom clothed [shrouded] with gold and with gems, he lay then covered-over with mold. He left after him three sons: Robert was-named [hight] the eldest, who was earl in Normandy after him, the other [second] was-named William, that bore after him in England the crown [regal-helm] the third was named Henry, to-whom the father bequeathed treasures innumerable [un-*tell*-able].

Translation [by Sir F Madden. The quotation marks show what belongs only to A., the brackets what belongs only to B.]. — *There* was a priest on earth (*or* in the land), *who* was named Layamon, he was son of 'Leovenath' [Leuca], — may *the* Lord be gracious to him! — he dwelt at Ernley, 'at a noble church' [with the good knight] upon 'Severn's bank' [Severn], — 'good' [pleasant] *it* there seemed to him — near Radestone, where he books read. It came to him in mind, and in his 'chief' thought, that he would tell the 'noble deeds' [history] of '*the* English' [England]; what 'they' [the men] were named, and whence they came, who first 'possessed' [had] *the* English land, after the flood that came from '*the* Lord' [God]; that destroyed here all that it found alive.

Translation. — At the midnight, when men were asleep, Arthur forth him went, 'noblest' [boldest] of all kings. Before 'rode' [proceeded] their gude, until it was daylight, they alighted from their steeds, and righted their weeds. Then saw they not far, a great fire smoke, upon a hill, surrounded by the sea flood, 'and' another hill there was 'most' high, the sea by it flowed 'full' [very] nigh; thereupon 'they' [he] saw a fire, that was mickle and most strong. The knights then 'doubted' [knew not], to whether *of the two* they might go, that the giant were not aware of the king's movement.

Translation. — And whoso shall wish this book again *a*nother time to-write, him bid I that he-it write right, so as this book him teacheth, all throughout after that [*i. e.*, according as] it is upon this first exemplar, with all such meter [rhyme] as here is set, with all so many words, and that he look well that he a letter write twice, everywhere where it upon this book is written on that wise, look he well that he-it write so, for he may not else in English write right the word, that wit he well to sooth [*i. e.*, let him know that well for truth].

§ 192. *From the Ancren Riwle.* [South English dialect, first quarter of 13th century.]

"Thet is the ende of the tale," seith Seneke the wise, "Ichulle thet ȝe speken selde and theonne buten lutel." Auh moni pun[illegible] hire word uorte leten mo ut, as me deth water et ter mulne cluse, and so duden Jo[illegible]bes freond thet weren icumen to uro-uren hun, seten stille alle seoueniht. Translation — "That is the end of th[illegible] tale," saith Seneca the wise, "I will that ye speak seldom, and then but little." [illegible]But many *a one* shuts up [impoundeth] her words for-to let more out, as one does w[illegible]ter at the millidam [close], and so did Job's friends that were come to comfort him[illegible] sat still all *a* week [se'nnight] But when they had once began for-to speak, then[illegible]ey could never stint their noise [clap]. So it is in many, as Saint Gregory saith[illegible] "Silence is word's foster-mother." Long silence and well guarded forceth the[illegible] thoughts up toward the heaven; just as you can see the water, when one confines[illegible]t and stops it well in front, so that it can not *flow* downward, then is it forced again[illegible] for-to climb upward

Christian man [illegible] — These are the twelve articles of the Christian belief, that each when he hath understanding [wit] and reason [skill] must [shall] believe steadfastly, for otherwise he can not be saved *there* twelve, according [by] the number [tale] of the Twelve Apostles that apointed [or composed] these for all those that wish to be saved to hold and to look to. . . . The first article is this "I believe in God, the father almighty, creator of heaven and of earth." This article Saint Peter composed. The second article pertaineth [belongeth] to the Son, as to his godhead, that is to say that he is God, and *it* is this: "I believe in Jesus Christ, our Lord, son of God, the Father, in all things that pertain to the godhead, and is one *and the same* thing with the Father except as regards [but one] the person, which is other than the person of the Father." This article St. John the Evangelist [gospeler] composed.

When Iesus herde these sayngs, he marveyled and said to them that folowed him, Verely y say vnto you, I have not founde so great fayth no, not in Israell.

INDO-GERMANIC ROOTS IN ENGLISH.

By AUGUST FICK, Ph. D.,

PROFESSOR AT THE UNIVERSITY OF BRESLAU; AUTHOR OF "VERGLEICHENDES WÖRTERBUCH DER INDOGERMANISCHEN SPRACHEN."

HISTORICAL SKETCH OF ENGLISH.

With reference to its vocabulary, English must be styled a composite language. As is well known, it has two principal sources the Anglo-Saxon, the language of the Angles and Saxons, who in the fifth and sixth centuries took possession of Great Britain, and the Old French, spoken by the followers of William the Conqueror, who in 1066 A. D., through the battle of Hastings, became master of England.

Already, before the introduction of the Norman French, the Anglo-Saxon had appropriated various elements from other languages, though to a less extent.

Like the other Teutonic peoples, the invading Angles and Saxons had borrowed single literary terms from the Latin, the language of the Roman empire. They borrowed somewhat on British soil from the speech of their Keltic subjects A further importation of Latin and Greek words was caused by the adoption of Christianity. Finally, the dominion of the Danes is proved by numerous terms borrowed from the Old Norse vocabulary, as, for example, *ransack*.

Even after the mingling of the Anglo-Saxon with the French of the conquerors, there were still frequent adoptions of foreign elements. Owing to the diligent fostering of the ancient languages in church and school in England, learned expressions found their way in a body into the language of ordinary life. This stratum of words is often clearly distinguished in form from the Romance words of ordinary life, the element which the Normans brought with them, in the common word the sounds of the Latin are transformed according to definite laws of development, while in the learned word they have remained intact Thus, *emperor* and *imperatorial* both come from the Latin *imperator*, which in *emperor* has undergone a popular transformation, but in *imperatorial* is presented to us in its learned form. These two words are related to one another as *empereur* and *impératrice* in French, where the distinction between the common language and the speech of the learned is still more evident

In the centuries just past, also, the English vocabulary has materially increased. New inventions and discoveries demand new terms, which are supplied chiefly by means of the ancient languages, the Latin, and particularly the Greek. Since the English language has spread over all the continents of the Old and New Worlds, expressions have been added to its ever-increasing vocabulary from the languages of the Hindoos, the American Indians, and many others

In this constant adoption of new materials of speech, the history of the English people is reflected, yet the language has not become a mere conglomerate of opposing elements, or a confused medley, but has preserved its unity and its original character. The wealth of the language was doubled by the adoption of the French vocabulary. The shortsighted purist fails to see that herein lies a great superiority of English over the Romance and Teutonic languages. Should it not be regarded as a mark of superiority, that in English the vocabularies of the Latin races and the Teutons are organically combined, that is to say, the vocabularies of the races which, since the downfall of the ancient civilization, have determined the fate of the world? Both elements are in English united in one harmonious whole by reason of the same pronunciation. In a tasteful use of the language, the Teutonic element will, as of its own accord, predominate in poetry and the expression of feeling, the Romance element in philosophic and scientific thought, while in the language of ordinary life both elements will be equally represented

In spite of this mingling with foreign languages, English has, by its internal structure and its grammar, remained a member of the Teutonic group of languages, although infinitely enriched, developed in an independent manner, and exalted to the position of a universal language. Within the Teutonic group, the English language belongs, first of all, to the Old Saxon branch, or to the group of dialects which have remained at the stage of the first *Lautverschiebung* [or shifting of sounds (Grimm's Law)], from which the High German, by a new shifting of sounds, has departed At first the Teutons divided into Teutons of the East and the West, or, more accurately, into Goths and Germans. The former perished, and the further development was consummated among the Germans, the Teutons of the West.

The Teutons, as we learn by comparison of languages, are closely related to the Kelts, Italic peoples, and Greeks. The Kelts, after obtaining an astonishing extension over Gaul and the British Isles, half of Spain, Northern Italy, Southern Germany, and the regions on the Danube, have disappeared, save for comparatively small remnants in Ireland, the Highlands of Scotland, Wales, and Brittany. Of the Italic dialects, the Latin, the language of Rome, mistress of the world, has been preserved in the languages of the Romance peoples. Lastly, the Greeks — without reference to the ancient colonies — have but poorly maintained their former extension.

The peoples of Western Europe — Teutons, Kelts, Italic peoples, and Greeks — are plainly separated in language from the Indo-Germans of Eastern Europe, that is, the Lithuanians, Letts, Kurlanders, Prussians, and Slavs, who are called collectively Letto-Slavonians (*i e*, Lettic peoples and Slavs) Perhaps it would be still better to call them Slavo-Baltic people, if we follow the example of noted investigators, and name the Lettic group Baltic, after their habitations on the shores of the Baltic Sea.

A third group, distinctly separate in language from the peoples of Eastern and Western Europe, is formed by the Indo-Germans of Asia. To these, and to these alone, belongs strictly the name Aryan, by which title they called themselves. They must, therefore, be thus called by science. But since prominent English scholars — as Sayce and Max Muller — also call the Indo-Germans collectively Aryans, the members of the Asiatic group of our family of peoples and languages — Persians, Bactrians, and Indians (Hindoos) — may be here called East Aryans. The name Indo-Iranians would also be an appropriate appellation, since by this title the inhabitants of India and Iran are embraced in one term.

The East Aryan languages, whose oldest monuments are the Indian Vedas, the Zend-Avesta, and the Persian cuneiform inscriptions, are distinguishable at the first glance from the languages of the European Indo-Germans of the East and the West. While among the Europeans the whole vowel system rests on the triad *a e o*, of which the last two vowels stand in a plain relation of ablaut to each other (as in *φερε, φόρος*), among the East Aryan peoples we find in place of these three vowels the monotonous *a*. The vowel system of the Europeans, *a e o*, is most nearly preserved in Greek, it may, therefore, suffice for the explanation of the difference in vowels between the Europeans and Asiatics of our family, to compare with one another some examples from the Greek and Sanskrit Gr. *ἄγω* I lead = Skr. *ájā-mi*, Gr *φερε* bear = Skr. *bhára*, Gr *φόνος* murder = Skr *ghanas*. Further, in place of the weakening of the three long vowels of the Europeans, *ā ē ō*, to *a e o*, among all the East Aryan peoples *i ī* appear as a weakening of *ā* Gr. *στατός* placed, *στᾱ* = Skr. *sthitá, sthā*, Gr. *θετός* placed, *θη* = Skr *dhitá, dhā*, Gr *κότος* grudge, *παλίγ-κοτος* growing malignant again, *κω* = Skr. *çitá, çā*, Gr. *ποτός* drunk, *πω* = Skr *pītá, pā* Also in the consonants, the East Aryan languages are materially different from those of the Europeans, especially surprising is the almost entire lack of *l*, so that for the two sounds, *l* and *r*, of the European languages, we find among the East Aryans only *r*: Gr. *πολυς* much = Skr *purús*, Gr *πλη* to fill = Skr *prā* To the peculiar combination of sounds *ksh* in Sanskrit, Zend, and Old Persian, there correspond in Greek *κτ*, and in other European languages the simple *k* sound e *g*, Skr. *kshi* to settle = Gr. *κτίζω*; Skr *kshēma* = Lith *kemas*, Goth *haims*, E. *home*.

Just as sharply as the East Aryans are distinguished from the Europeans, are the West Europeans (Teutons, Kelts, Italic peoples, and Greeks) distinguished from the East Europeans and East Aryans The characteristic difference here is in the consonants. The East Europeans and East Aryans possess two series of gutturals, *k g gh* and *ç z zh* e.g Lith *kas* who, OSlav *kŭ* = Skr *kas*, Lith. *gerti* to drink = Skr. *gar* to devour; Lith *qana* enough, OSlav. *goneti* to suffice = Skr *ghanā* mass; Lith. *szimtas* hundred, OSlav *sŭto* = Skr. *çatám*, Lith *žinóti* to know, OSlav. *znati* = Zend *znā* to know, Lith *želti* to be green, OSlav. *zlato* gold = Skr *har*, Zend *zar*, to be yellow, green (from *zhar*). To both these series of sounds, *k q gh* and *ç z zh*, which are common, as the examples cited show, to the East Europeans and the East Aryans, quite different sounds correspond in the languages of the West Europeans.

To the *k* series in the languages of the East corresponds in the West a *q* series; that is to say, sounds in which the guttural is closely united with a following labial, *v* or *w*, so that in place of the *k g gh* of the East we have in the West *kv qv ghv*, which may also, through influence of the *v*, be changed into the labials *p b bh*, and which also show other changes which presuppose the ground forms *kv gv ghv*. Some examples may illustrate this:—

Goth *hwas* who, E *what*, OIr *co-* = Gallo-British *po-*; L *quo-d* = Oscan *pùd*; L *ubi* where, *ali-cubi* somewhere = Oscan *pùf*, Gr *πῶς* how = Ionic *κῶς*. Here everywhere evidently the ground form is *kvo-s*, while in Lith. it is *kas*, in OSlav. *ko-*, and in Skr *kas*

Goth *qinō, qēns*, wife, woman, E. *queen* = OIr *ben* woman, wife, Gr *γυνή*, Boeotian *βανά*, but Prussian *geno*, Skr *gnā*, E *path*, G. *pfad*, L *venio* I come = Oscan *ben*, Gr. *βαίνω* I go, *βάσις* a stepping, but Skr. *gam, gā*, to go. In these examples the forms of the sound in the languages of Western Europe are only to be explained by assuming the original sound *gv*.

E. *warm* (from *gvarm*), L *formus* = S *gharmá*, Gr. *φόνος* murder = Skr. *ghaná*; the West European ground form is evidently *ghvormó-s, ghvono-s*.

The *ç* series of the East Europeans and East Aryans appears in the languages of Western Europe as a *k* series, so that in place of the Eastern sounds *ç z zh*, in the West the pure *k* sounds appear, *k g gh*, subjected to no change

E. g., E *hund*-red, Goth *hund*, Ir. *cét*, Gallic *cent-*, L. *centum*, Gr *ἑκατόν*, but Lith. *szimtas*, OSlav *sŭto*, Skr *çatám*. Goth. *taihun* ten, Ir. *dec*, L. *decem*, Gr. *δέκα*; but Lith. *deszimtis*, OSlav *deseti*, Skr. *dáça*.

E *know*, G *kennen*, L. *(g)nō-sco*, Gr. *γιγνώσκω*; but Lith. *žinóti*, OSlav *znati*, Zend *znā*, to know ONorse *aka* to drive, E. *acre*, Ir *ag-*, L. *ago* I drive, *ager* field, Gr. *ἄγω, ἀγρος*, but Zend *azāmi* I drive.

E. *goose*, G *gans*, Ir. *gós*, Gr. *χήν*; but Lith. *žąsis*, Skr. *hañsa* (for *shansa*) goose: E. *gang*, Goth. *gaggan*, but Lith *ženg-ti* to step, Zend *zaŋgra* foot.

These examples may suffice for illustration of the fact that the languages of Western Europe are strictly distinguished from all their relatives in the consonant system, having *q* and *k* sounds respectively where the rest display *k* and *ç* sounds.

The languages of Eastern Europe, or of the Slavo-Lettic peoples, are likewise plainly separated from all the rest in phonology. They have lost the old aspirates, the soft [voiced] as well as the hard [voiceless], and have replaced them by the *mediae g z d* and the *tenues k ç t*.

The Indo-Germanic languages thus fall into three groups, according to their original phonetic condition —

1. The East Europeans, or Slavo-Lettic peoples, have the vowels *a e o* and the sounds *k* and *ç*, but no aspirates.

2. The West Europeans have *a e o*, and *q* and *k* sounds respectively in place of the *k* and *ç* sounds.

3. The East Aryans, or Indo-Germans of Asia, have *a* instead of *a e o*, and *k* and *ç* sounds.

If we transform these statements into an historical view, they show that the Indo-Germans were already, in very ancient times, divided into three peoples, one dwelling in Asia, one in Eastern Europe, the third in Western Europe.

In order to be able to draw further historical information from these linguistic facts, we must determine which of the three groups has preserved the original system of sounds.

The agreement of the West Europeans and the East Aryans in the possession of aspirates shows that these were originally common to all Indo-Germans, and thus belonged to the original language, but were lost at some later date by the Slavo-Lettic peoples. Likewise it may be proved that the East Aryans also originally possessed *e* and *o*, and at a later date replaced them by *a*. The proof lies in the fact that, according to the discovery of Collitz, the *k* sounds become palatal before *a*, when *e* corresponds to this *a* in the European languages: e. g., Skr *ca* = Gr. τε = L. *que*.

The proof that the *k* and *ç* sounds were the original ones, and that the *q* and *k* sounds of the West Europeans were derived from these by a kind of partial Lautverschiebung, can not be given here. I refer to the fourth edition of my "Vergleichendes Wörterbuch der Indogermanischen Sprachen," where the reader will find in general a more careful proof of the statements given here.

According to these statements, the sounds of the original language were *a e o* and *k* and *ç*. The East Aryans, when separated from the original people but still united among themselves, gave up *e* and *o*, as well as *l*, and replaced these sounds by *a* and *r*. The West Europeans, at a time when they still kept together, shifted the *k* and *ç* sounds to *q* and *k*, but retained the original vowels *a e o*. Finally, the Slavo-Lettic peoples, while united among themselves, gave up the aspirates for *mediae* and *tenues*.

While the Indo-Germans still formed one people, and still spoke one language with the *a e o* and *k* and *ç* sounds, they dwelt probably on the confines of Europe and Asia, in the southern branches of the forest-clad Ural Mountains, as neighbors of the primitive Finnish folk which occupied the central or mineral region of the Ural Mountains. From these regions the East Aryans wandered as nomads to the east, the Western division journeyed towards the west, perhaps through the fruitful district which now is called the Black Earth and reaches from Penza to Kharkov The richness of the soil may have occasioned a change from grazing to agriculture. At all events, West Europeans and Slavo-Lettic peoples were still one united folk when their forefathers took up agriculture. This is proved by the agreement in the terms relating to agriculture: e. g., Goth. *arjan* to plow, L. *arare*, Gr. ἀρόω = Lith. *arti*, OSlav. *orjq*; E. *sow*, Goth. *saian*, L *sero*, *sēmen* seed = Lith. *sėju*, I sow, OSlav. *sějǫ*, etc.

The phonetic system of the original speech was, according to the foregoing, essentially like that of the Slavo-Lettic peoples. It was characterized by the three vowels *a e o*, the sounds *k* and *ç*, and the possession of *l* together with *r* But we ask now, what linguistic formations and what words in the Indo-Germanic languages belonged already to the original language? The question is properly already solved by the preceding statements. It is practically the same as the question of the first separation and division of the hitherto united folk. According to the foregoing inquiry, the East Aryans emigrated from the southern Ural region over the Turanian steppes to Iran and India, as a consequence of which the bond between the emigrants and the parent folk was sundered. From this it follows that everything which in the speech of the Europeans and East Aryans is originally identical belonged to the original language. In considering this, it is a matter of no consequence whether the word has been retained in several members of the European and the East Aryan group, or whether it occurs only in one member of each group. So, e. g., the verb *dréughō* (I deceive) is to be assigned to the original language, although, outside of the Sanskrit and Zend *drugh*, it occurs only in the Teutonic; OS *bi-driogan* = G *betrügen* Likewise *çvento-s* (holy) is a word of the original language, although it is retained only in the Slavo-Lettic (Lith. *szventas* = OSlav. *svętŭ*) and the Zend *çpenta* To produce another example from the English, *dhuneyō* (I din) was already present in the original language, although it can be certainly pointed out only in the English *din* = AS. *dynnan* and in the Skr. *dhunaya* (*dhvanaya*) to sound.

If one wishes to ascertain what is common to the East Aryans, and thus restore the East Aryan unity of speech, he must in like manner trace out the first separation which occurred among the peoples of this linguistic group. This was the separation into Iranians and Hindoos of Aryan race; and accordingly all originally identical speech material which occurs west as well as east of the Soliman mountains that separate Iran and India, is East Aryan Here, too, it is enough that a word occur in one member of each group, and so, e. g., the comparison of the word *modor*, *mohar*, first found in Pehlevi (= Pers *muhr* seal) with the Skr *mudrā* (seal) would be a sufficient reason for assigning *mudrā* to the East Aryan original speech, if one were sure that here some later borrowing from the Sanskrit, or *vice versa*, had not taken place.

When the Europeans moved west from the foot of the Ural Mountains, they remained for some time together. They made in common the transition to agriculture, as is proved by the expressions common to West and East Europeans which refer to this occupation. To this period belong also the remaining words which are common to both groups of Europeans, but are unknown to the East Aryans But this union of the Europeans was not of long duration, and the phonetic system of the original speech was not essentially altered meanwhile.

The Slavo-Lettic peoples remained near the old home. But while still united as one folk, they gave up the old aspirates, and in many other ways altered the inheritance which had come down to them. They separated at first into Slavs and Baltic (Lettic) peoples; the Slavo-Baltic (Slavo-Lettic) language is therefore obtained by a comparison of both groups.

The West Europeans, or the ancestors of the Teutons, Kelts, Italic peoples, and Greeks, at some period while they were still one people and possessed one speech, changed the inherited *k* and *ç* sounds into *q* and *k* sounds. The Greeks were the first to separate from this union, while the forefathers of the three remaining peoples still for some time continued united. Consequently, the West European group of languages would fall into an older and a more recent stratum. To the older stratum belong those words which occur in the Greek and also in at least one of the three remaining divisions. To the other stratum belong those words which never appeared in Greek, but which can be traced in at least two of the other three divisions.

To the Teutonic unity of speech is to be assigned everything which occurs both among the Goths and also among the remaining Teutons, and shows itself to be original. In other words, the Teutonic people, after separating from the West European union, first divided into West Teutons and Goths. Phonetically, the Teutonic is plainly separated from all its relatives by its Lautverschiebung: the Goths, or East Teutons, are characterized by the preservation of the old *ē*, which the West Teutons changed into *ā*; e. g., Goth. *gēbum* we gave = OS. *gābun* = E. *gave* = OHG. *kāpun*.

From the West Teutonic came the High German through a new, though partial, Lautverschiebung, while the remaining dialects, among them those of the Saxons and Angles, kept to the older phonetic system.

Thus we have come back to the Anglo-Saxon element of the English language, from which we started. We have seen above how this primitive form of the English language has been enriched in historical times through the reception of words from foreign tongues into its vocabulary. At the beginning of our article, the Anglo-Saxon foundation was considered as something given, not as a thing to be comprehended in its gradual origin. But now we can distinguish in the Teutonic element in English several strata, according to the time of their origin.

The original Anglo-Saxon kernel of the English language belongs to the periods enumerated in the following statement: —

I. Period of the original speech.

At this time all those words were coined which occur in the original English and also among the East Aryans; e. g., E. *warm* = Skr. *gharmá-s* warmth.

II. Period of the unity of speech of the Europeans of the East and West.

To this time belong those words which occur in the original English and also in the Slavo-Lettic, e. g., E *I sow* = Lith. *sėju*, OSlav. *sějǫ*. The phonetic system of this period is not different from that of the original speech, and forms only a transition to III.

III. West European period.

This time is characterized by the substitution of *q* and *k* for *k* and *ç* respectively. Here belongs all the original English which occurs at the same time among other Europeans of the West, outside of the Teutons; that is, among Kelts, Italic peoples, and Greeks; e. g., E. *beech*, *book* = L. *fāgus* beech = Gr. φηγός, φαγός, oak; E. *law*, AS. *lag* = L. *lēx* (ground form *lēgh*, dat. *laghéi*), akin to E. *lie*, *lay*. With this last example compare the Gr. τὸ κείμενον, which from its literal meaning, that which is laid down or established, comes to signify *law*.

As subdivisions of III, we might place under III*a*. whatever occurs at the same time in Greek and English; under III*b*. what occurs only among the other West Europeans.

IV. Period of the Teutonic unity of speech, after the Lautverschiebung.

Here everything of the original English is coined which occurs at the same time in Gothic; e. g., E. *holster* = Goth *hulstr* a veil. What appears only in Low and High German is to be given separately.

If one arranges the primitive English, or the Anglo-Saxon element of English, in these categories, or separates it according to these divisions, he obtains insight into the gradual rise of the same, and reconstructs the prehistoric periods through which the language passed on its way from the original language to the language of the Anglo-Saxons, when they crossed over to England under their Old Saxon horse banner and coat of arms, which tradition has personified as Hengist and Horsa. In the solution of this problem the etymologist becomes an investigator in a prehistoric field, and his activity may be compared with that of the anthropologist when he arranges prehistoric finds according to the different ages, — the stone age, the bronze age, and the iron age.

Quite different is the task of the etymologist in the investigation of the store of words which came into the English language after the emigration of the Anglo-Saxons from the Continent. Here he must separate the different strata in the accretions which in the course of time were added to the original English stock. These strata may here be named again, arranged according to the periods before and after the battle of Hastings

I. Anglo-Saxon period.
   - A. Words borrowed from the language of the original Keltic inhabitants of the British Isles. These appear to be few.
   - B Words borrowed from the ecclesiastical language, — caused by the adoption of Christianity; e. g, *bishop*.
   - C. Words borrowed from the Northern tongues, — caused by the reign of the Danes; e. g., *ransack*.

II. English period from 1066 A. D. on.
   - A. Introduction of the Old French spoken by the Norman conquerors.
   - B Learned words borrowed from Latin and Greek.
   - C Words borrowed later from the various languages with which the English has come into contact.

In the following list of words an attempt has been made to lay a foundation for such an historical investigation of the English language as has been indicated here. To this end I have endeavored to present the share of the English in the first prehistoric period, that of the Indo-Germanic original speech, or the speech of the primitive folk before the separation of the East Aryans from the parent stock. All the roots and words of the original language are enumerated which are found in the original English, that is, in the Anglo-Saxon vocabulary of the English language; and that form of these roots and words is placed at the head which, according to our present information, they possessed as parts of the original language. The sounds of the original language as here adopted are: —

a e o i u; k kh g gh, ç z zh, t th d dh, p ph bh; n m y j r l v s.

The palatals are denoted by *ḱ kh́ ǵ ǵh*, the semivowels by *n̥ y̥ r̥ l̥ v̥ s̥*.

The verbal and pronominal roots are separated from each other, a matter that requires no justification. The prepositions are likewise grouped together as a separate class, as they usually can not with certainty be referred to either of the above classes of roots. A fourth class is formed by the nouns of the original speech, which are derived from verbal roots, to be sure, but whose origin is often obscure. Finally, as a fifth class, the numerals are given, the treatment of which likewise presents difficulties. For convenience of reference, the roots and words in the following lists have been numbered consecutively from 1 to 310 by the American editors.

LIST OF ROOTS OF THE ORIGINAL LANGUAGE IN ENGLISH.

☞ The roots in the following list are numbered, and references are made to them from the etymologies of words in the main vocabulary by means of corresponding numbers.

I. VERBAL ROOTS.

1. √ AÇ- to be sharp.
E. *ear* (of grain) = Goth. *ahs;* E. *awn* = Goth. *ahana* chaff, OHG. *agene* = L. *agna* a blade, a straw; E. *edge, egg,* v. t. = AS. *ecg,* n., OHG. *ekka* = L. *acies:* cf. L. *acus* chaff, *acer* sharp, Gr. ἀκόνη a whetstone, ἀκαχμένος sharpened, ἀκωκή a point, Skr. *açan, açna, açman,* a stone, *açri* corner, etc.

2. √ AZD I drive, lead.
E. *acre* = Gr. ἀγρός field, Skr. *ajrá* field, and in the E. words *agent, agile, act, action,* etc., from L. *ago* I lead, drive = Gr. ἄγω, Skr. *ájāmi,* Zend *azāmi.*

3. √ AZHĐ, ANZHĐ, I narrow.
E. *ail, awe* = AS. *oge, ege,* Goth. *agis,* Gr. ἄχος distress; E. *ugsome, uglesome, ugly* = AS. *egle,* Goth. *agls* unfitting: cf. Gr. ὀχλέω I disturb, Goth. *agan, ōg,* to fear, Gr. ἄχος distress, ἄχομαι I grieve, Skr. *áhāmi* I unite closely; E. *angry,* cf. L. *ango* I strangle, Gr. ἄγχω, Skr. *aṁhú* close, *aṁhas* pressure.

4. √ EIMI, IMÉS, IÉNTI, I, we, they go.
OE. *yode* I went = Goth. *iddja,* E. *year* = Zend *yāre,* and E. *aye* = Gr. αἰεί cf. Skr. *āyus* life, *éva* course, L. *eo* I go, *ire* to go, Gr. εἶμι, ἴμεν, ἴασι, I, we, they go = Skr. *émi, imás, iánti.*

5. √ (EISĐ), pres. ISKĐ I desire, demand
E. *ask* = OHG. *eiscōn,* Lith. *jëszkóti* to demand cf. Skr. *icchámi,* pres of *ish* to wish.

6. √ ÉDĐ I eat
E. *eat, ate, eaten* = Goth *itan* to eat, E *etch* = Goth *atja* I cause to eat, G. *ätze* · cf. L. *edo* I eat, Gr ἔδομαι, Lith *edmi,* Skr *admi,* imperfect *ádat.*

7. √ ÉMĐ I take.
This is the basis of NÉMO (from Ê-NÉ-M-MI, 3d pl Ê-NÉMÓNTI) · ÉMO = L *emo* I buy, perf. *ēmi,* Lith. *imu* I take, perf. *emiau,* Skr. *ámati* (perf. act. part *ēmivā́ṁs*) he seizes. NÉMO occurs in E *nim, nimmed,* cf AS *niman* to take; E *nimble* = AS. *nemol* (equivalent to L *capax*), E. *numb,* cf. G. *benommen,* Gr νεμω I distribute, possess = Goth. *nima* I take

8. √ ÉRA : RA to row
E *oar* = ONorse *ār* (from *ēr*), E *row,* v = AS. *rōwan,* MHG *rüejen,* E *rother-nail, rudder* = AS *rōðer,* G. *ruder.* cf. Lith *irti,* Lith, to row, Gr. ἐρέτης a rower, ἐρέσσω I row, ἐρετμός an oar = L. *rēmus, ratis* a raft, Skr *aritár* rower, *aritra* oar

9. √ ÉSMI I am, ÉSTI he is.
E. I *am,* he *is* = Goth *im* I am, *ist* he is; E. *are* = ONorse *erum* · cf Gr. ἦα I was, L *eram,* Skr *ásis* thou wast, E *sooth* = AS *sōð,* OS *sōth,* ONorse *sannr* (cf. Goth. *sunis*), from the participle; cf Gr ἐών, p pr, being, L *ab-sens* absent Cf. Gr εἰμί I am, ἐστί he is, L. *sum* I am, *est* he is, Skr *ásmi* I am, *ásti* he is, *sán, t. satī,* being.

10. √ OK to see
E *eye,* pl. *eyne, eyen* = AS *ēage,* Goth. *augō,* pl *augōna* (*au-gō* stands for *ahvgo,* i. e., *ahv* = *ok,* with the diminutive suffix *go*), OKYI eye is in Lith *akis,* L. *oc-ulus,* Gr ὄσσε (= ὀκιε) the two eyes, Skr. *akshi* (i e, *akyi*) eye, the verb OKY- to see, in Gr. ὄσσομαι I see = Goth. *ahja* I think, Gr. ὄψομαι I shall see, ὄπωπα I have seen: cf Skr. *tkṣh* to see.

11 √ OR-, pres. ṚNÉUMI I arouse
E. *earn* to curdle, from AS. *ernan* = *rennan,* E *run, ran, rennet, rindle, rill,* akin to Goth. *rinnan, rann,* to run, derived from RNU which occurs in Gr ὄρνυμι I arouse = Skr *ṛṇómi* (ὦρτο aor. 3d sing = Skr *ārta*), L *orior* I rise, E *ern, earn,* eagle, cf. OHG *aro,* pl *ernī,* OSlav *orĭ-lŭ,* Gr ὄρνις bird

12. √ ÉKĐ, ÉKNKĐ, I surround, gird.
E. *hag* a witch, *haugh, haw,* a hedge = AS. *haga,* cf G *hag, hain,* grove, E *hedge* = LG. *hegge,* G. *hecke,* E *heck* (= *hetch*) = G *heck,* E *hatch,* v = G *hecken;* E *hock, hough* = AS *hōh* (from *honha*), Lith *kinka* kneejoint, E *heel* = AS *hēla,* E *hox* = OHG *hahsa* hind leg, L *coxa* hip, Skr *kakshā* girdle, shoulder, concealment. Cf. Gr κιγκλις latticed gates, L. *cancelli,* Skr *kacatē* he binds, *kāñcī* girdle.

13. √ ÉKĐ I hide
E. *hood* = AS. *hōd,* MHG *huot;* E. *heed* = AS *hēdan,* MHG. *hüeten,* also E *hat, hatted,* cf. G. *hut;* here also E. *hide,* n = G *haut* = L *cutis* (*cut* from *quet*) cf AS *heaðor* "receptaculum," Goth *hēp-jō* chamber, L *catinus* bowl, *catillus,* Gr. κότυλος, Skr. *cátati* he hides.

14. √ ÉKMO I surround, arch, hide.
E. *hem* edge, *hemmel* shed, cf Goth. *hamōn* to cover, OHG. *himil* heaven (= G. *himmel*) and LG. *hammel* hem cf. L. *camurus* crooked, *camera* a vault, Gr. κάμινος oven, Zend *kamara* girdle, Skr. *kmárati* he bends.

15. √ ÉKMĐ I hum, buzz.
E *hem.* v. i., *hum, humming, humblebee* = G *hummen* to hum, *hummel* humblebee = OHG. *humbal:* cf Lith. *kim-ti* to be hoarse, *kamane* wood bee, Lassian *kamus,* Skr. in *camara* "bos grunniens"

16. √ ÉKER-, ÉKERV-, to turn
E. *whir, whirl* (= *hurl*), E *harrow* = AS. *hyrwe;* E *hoard, hoard*, fence, screen = Goth *haúrds* door, G. *hürde* hurdle cf L. *crātes* hurdle, *row;* E *hurdle* = AS. *hyrdel,* E. *ridge* = AS. *hrycg,* ONorse *hryggr,* OHG. *h* standing for *hruvi:* cf OSlav *črŭvĭ* worm, *krivŭ* = Lith. *kreivas* bent, *urvus, cortina* kettle, Gr. κυρτός curved, κορωνός, Skr *caru* kettle, *kṛmi* worm

17. √ ÉKELĐ to strew, cover.
OE. *hele, heal,* to conceal, cover = G. *hehlen,* E *hell* = G *holle* E *helm* = G. *helm;* E. *hull, hill* = G. *hülle, hullen;* E. *holster* = G. *holfter* L. *oc-culo* I cover, *color* color, Skr. *kirāti* to strew, bestrew.

18. √ KRÉU to be wounded or bloody, to fear
E. *raw* = AS. *hreáw,* G. *roh,* E *rear, rare,* raw = AS. *hrēr* cf. Gr κραῦρος, Skr. *krūrá;* E. *rough, ruff* = OHG. *rūh,* G. *rauh,* E *rue* = G. e, akin to OS. *hrewan* to pain: cf. L. *cruor* blood, *crūdus* raw, Gr. κρύος f κραῦρος brittle, κρέας flesh; Skr *kravis* (= Gr. κρέας), *krūmá, krūrá* With Gr κρύσταλλος ice, cf. E. *freeze, frost* = G. *frieren, frost,* ONo *hrjōsa* to freeze (*f* = *h* = Aryan *k*).

19. √ KRÉKĐ (KRENK) I roar, croak.
E. *raven* = ONorse *hrafn,* G. *rabe,* cf. Gr. κόραξ; E. *hringan:* cf. Lith. *krak-ti* to roar, *krank-ti* to croak, L. *ring, rang, rung* = AS. play on an instrument, Skr *kraksh* to roar. *rōcio* I croak, Gr. κρέκω I

20. √ KJÉYĐ I delay.
E. *while* = G. *weile;* E. *home* = AS. *hām;* E. *ham* Lith. *kémas,* Skr *kshéma* rest, stop; perhaps also E. *let,* cf. Goth *haims* village, cf. Skr. *kshétra* field. *heath* belongs here, G. *heide,*

21. √ GÃ to go.
E. *pad, path* = AS *pæd, pæð,* G. *pfad;* E *pad pedden, paddeln:* cf. Gr. βαίνω I go, ἔβη he went, *padded, paddle,* v. = LG. to go. πατός passable, Skr. *gā, jigāti,*

22. √ GÉ to sound.
E. *caw, kaw, chough* = AS *ceá,* OHG *chāha* an of E. *quoth* (= Goth. *qaþ,* fr. *qiþa* I speak), an *gāyāmi* I sing, is the basis E. *chitchat,* cf. Skr. *gadgada* stammering, from d of E *chat, chatting,* OE. *chatten;* *gad* to speak.

23. √ GÉMĐ I come, go.
E. *come, came* = Goth *qima, qam,* E *qu* pleasing, cf. OHG *bi-quāmi* fit, G. *bequem me* = AS *cwēman,* akin to *cwēme* fit, *jamati* he comes. convenient. Cf Skr *gámati* = Zend

24. √ GÉRĐ to sound
E. *chirr* = AS *ceorian,* E *chirm, chi* βρεμω, OHG. *chweran,* Skr *járatē,* to *rme* = AS. *ceorm,* n, *cyrman,* v.: cf Gr. E *crow,* v = AS. *crāwan,* OHG *chr* oar, sing. Also, E *crane,* cf Gr. γέρανος, crow, E *croon* = OHG. *chrōn* talkat *jan,* G *krahen* cf Lith *gróju, gróti,* to ive.

25. √ GÉRĐ I swallow.
E. *querken,* cf ONorse *querk* thr *gurgulio* gullet. E *crag, craw* = *gurgere* gulf, abyss, swallow, Gr βιβρώσκω I eat, βορά HG *chrago,* G *kragen* collar cf. L. *vorare* to od, Skr. *girāti* he swallows.

26. √ GLÉU to form into balls
E *clew, clue* = LG. *klauen,* AS akin to L *gluere* to draw together *cleōw:* cf. Gr. γλουτός the rump, Skr *glau* ball, E *crewel* stands for *clewel,* as G. *knaul* for *klauel.*

27. √ GLÉUKĐ I pluck
E *pluck* = AS *pluccian,* ONo Goth. *pluhan* as E *tuck* (= G se *plokka,* G *pflucken* E *pluck* is intensive of *dūco*) To the root verb *pluk* zucken, zucken) of Goth. *tuha* I lead, draw (= L. ONorse *plokka* to tear away, corresponds exactly the Skr *glōcāmi* I rob, cf.

28 √ GLÉZHĐ to play for a ob
E *play, pledge, plight* = wager
G *pflegen, pflicht* duty OSax *plegan* to answer for, OHG *pflegan* to care for, stake at play. f. Skr *glāhatē* he plays at dice, he wins at play, *glaha*

29. √ GHADH- to grasp, fi
E. *gather, together,* cf LG *vergadern,* Goth *gadi-ligga* a relative, OS *gi-gado,* G *gatte* husband, OSla godi-ti to fit, to please, Skr. *gadh* to cramp, bind fast, *pari-ē-gadhita* gras suitable); the grou With E *good,* G *gut,* cf Gr. ἀγαθός (properly, fitting, form is *gádhos,* locative *gadhé*

30 √ GHEDHYĐ I, k E *bid, bade, bid* which *θ* is palata *n* = Goth *bidjan:* cf. Gr θεσσομαι I pray (from *θεθομαι,* in χ), πόθος a yearning, Irish *guidiu* I entreat, Zend *jaidhyēmi* I ask. Perhaps *qad* belongs here.

31 √ GHÉNĐ I strike, kill.
E *bane* = S *bana,* perhaps also E *gin,* begin = OHG. *biginnan* · cf. OHG. *gund, gundia* battle, Irish *benim* "ferio," Lith *gimu, ginti,* to defend, *genu, gints,* to drive cattle, Gr. θείνω I strike, ἔπεφνον I slew, φονος murder, Skr. *hanmi* I strike, *ghnás* (= Gr φόνος).

32 √ GHÉRĐ I burn, glow, pres GHṚNÃ-TI
E *brede* (= *brend*) *brenning, brand, branded* (= *brended*); E *brine* = AS *brȳne;* E. *brun* E. *bourn* = G. *born, brunn,* E *brunt,* cf G *brunst,* E *burn* = AS. *beornan* Germanic *brennan, brannr:* cf L *furnus* an oven, *formus* warm, Gr θέρομαι become warm, θερμός hot, Skr *háras* glow, *ghṛṇā, ghṛṇi,* glow, E *warm* Skr *gharmá* heat. *warm,* G. *warm,* stands for *gvarm-,* and is identical with L *formus* warm,

33. √ GHÉRYĐ I desire.
E *yern, yearn* = AS *georn* desirous, G *begehren* to desire, *gier* greed, *gern* willingly cf Oscan *her-est,* Umbrian *hertest,* "volet," L *horior* I urge, *hortari* to urge, Gr. χαίρω I rejoice, χρηίζω I desire, Skr. *har, háryati,* to love, like.

34 √ GHRÉDYĐ (to step out), to desire.
E. *greed* = Goth *grēdus,* E *greedy* = AS *grēdig* cf Goth. *grid-s* step, L. *gradior* I step, Skr. *gṛdhyati* to step quickly, to be eager, *gṛdhnu* quick, hasty, *gṛdhra* eager

35 √ GHRÉMĐ I distort the mouth
E. *gram, grum, grumble, grumpy,* cf G *grimm* grim, *gram* grief, *grummeln* to rumble cf. L *fremo* I roar, Gr χρεμετίζω I neigh, χρόμος a crashing sound, Skr. *harman* yawning, Zend *grañta* furious To the same root belong E *grin, grinning* (= G *greinen*), E *groan* (= AS *grānian,* where *ā* = *ai*).

36 √ ÇAD- to go; causative, to set on, to hunt, to excite
E. *hate, hatred* = Goth *hatis,* n, *hatizōn,* v, G *hass, hassen,* also E *hint, haunt, hunt, hunter* cf. L. *cado* I fall, *cēdo* I go, Skr. *çádati* he goes, *çādáyati* he sets on, drives

37. √ ÇANKĐ I hang
E *hang, hung* = G *hangen,* E *hone* to pine, to long = AS *hōn* to hang, Goth. *hāhan* (from *hanhan*) · cf L. *cunctari* to delay, Skr *çaṅkú* hanging, wavering, *çáṅkatē* he doubts, hesitates

38 √ ÇĐ to sharpen
E *hone* a stone = ONorse *hein,* AS in *hēnan* to stone: cf. Zend *çaēni* point, Gr. κῶνος cone, κότος grudge, παλιγ-κοτος sharp, L *cōtes* whetstone, *catus* shrill, Skr. *çitá* sharp, *çā, çyáti,* to sharpen

39. √ ÇOG- to help, assist.
E. *hap, happen, happy,* mis-*hap* = ONorse *happ* success, Gallic *cob,* Irish *cobh* success, victory, in *Cobnertus,* Skr. *çag-* in *çagma* helping, profitable

40. √ ÇLÉYĐ I bend, lean
E *lean* = AS. *hlinian,* G *lehnen,* E *ladder* = AS *hlǣder,* OHG *hleitara,* G. *leiter,* E *lid* = AS *hlid,* G *-lid* cf. L. *inclīnare* to incline, Gr κλινω I incline, κλιμαξ ladder, Skr. *çráyatē* to lean.

EXPLANATORY NOTES

ON

THE REVISED ETYMOLOGIES.

It was intended that the etymologies of the former edition should be simply revised — that is, should be retained in the present edition in matter and form except so far as errors had been detected, or new discoveries made, or better methods of presentation devised. The application of this rule has led to several important changes, a brief notice of which may be useful.

I. A method has been adopted by which the history of the words treated may be indicated. The older English forms, if known and differing from those now in use, come first; then the earlier forms, — Anglo-Saxon if the word is native; French, Latin, Scandinavian, etc., if the word is from a foreign source. Not infrequently a word is in this way traced back to two or more languages, thus, the French words in English usually come from Latin, but not always directly Such words as *apricot*, *escort*, *guise*, *spy*, will illustrate the arrangement of forms. When the direct history has been followed as far back as possible, then cognate words in other languages of the Indo-European family are added; but these kindred words are always clearly distinguished from the actual sources of the English words. For comparatively rare or obsolete words, the history is not, as a rule, carried beyond the immediate source of the English forms; but common words receive fuller treatment. No attempt is made to give roots; but an idea of the present views of scholars as to the probable primitive forms can be obtained from Professor Fick's "List of Roots of the Original Language in English," pp. xxiii–xxxi, to which reference is made by number under the sign √. The historical order here indicated is departed from in certain cases where no inconvenience or misunderstanding seemed likely to result, namely, when a foreign word, usually a French one, is given in an old form, while that now in use, if the word still exists, is different. In these cases the modern form is added immediately after the old one; readers thus being enabled to recognize the English word as really identical with the modern French one, though not, properly speaking, coming from it. Examples of this may be found under the words *able*, *catch*, *governor*, and many others. It was often doubtful whether a word came into our language directly from Latin, or passed through French first on its way into English. In such cases, if the Latin is given as the source, the possibility that the French was really the immediate source is indicated by putting at the end of the etymology the French form with the abbreviation "cf." preceded by a colon. Sometimes a different wording has been employed to express such a doubt clearly.

II. By recognizing and indicating this historical order of word forms, it has been possible to omit a considerable number of forms which throw no light on the history of the English words. If a given word comes from the French, and the French word is a direct descendant from the Latin, then the Italian, Spanish, Portuguese, and Provençal cognates are evidently unimportant. If, however, the French word is from Italian, for example, the insertion of the Italian word is necessary for the complete history of the English one.

III. A special feature of the revision is the careful and extended use of cross references. Derivative words refer — except in case of rather uncommon (or technical) words whose full history is less important — to a simpler form when one exists, where the final etymology is given, and under this simpler form reference is again made to the most interesting or typical derivatives from the same root. The words known as doublets, in which the same original word appears in the language in two or more differing forms, as *guard* and *ward*, each having its own history, regularly refer to each other. By this means not only is the history of a word given, but attention is directed to kindred words, whose relations, often not obvious at first sight, are made clearer by the history briefly indicated in the etymology of each. The composite character of the English vocabulary, and the great fertility of roots, are thus illustrated. Common words, such as *two*, *five*, *ten*, *father*, *cow*, *water*, *full*, *loud*, *red*, *thin*, *be*, *come*, *stand*, etc., will serve as illustrations. This system of references, the same in principle as that used by Skeat in his Etymological Dictionary, has here been carried out, it is believed, more thoroughly and consistently than in any other English dictionary.

IV. In general, the final etymology has been put under the commonest form of the simple word, — that which is in most familiar use in the language. This is usually a native English word, or a word early adopted into English. Compare *father* with *paternal*, *foot* with *pedal*, *inspect* with *spy*, *three* with *trio*, etc.

V. The fact that not all the etymological problems of English have been solved, and that much work is devoted to the subject, with a consequent steady advance in our knowledge, makes obvious the need of caution. Especially is this true when, as here, the attempt is made to popularize some of the results of scientific philological study. The frequent use of such words as "perhaps," "possibly," "probably," or the abbreviation "cf.," which makes no positive assertion, will show that in the revision the danger of too positive statement has been kept in view.

VI. For the spelling or transliteration of foreign words in the etymologies, Skeat's system has generally been followed. The only important variations are those which follow. In Sanskrit words, *c* is used instead of *ch*, *ch* instead of *chh*, and *ṛ*, *ṭ*, *ḍ*, *ṭh*, *ḍh*, *ṇ*, instead of *ri*, t, d, *th*, *dh*, n Instead of *m̃*, the sign *m* has probably been used once or twice In Gothic words, *q* is used instead of *kw*, *þ* instead of *th*, and the short *aí* and *au* are written *ai*, *aú*. In Arabic words, the fourteenth letter of the alphabet is rendered by *ç* instead of *s*. Long vowels are marked throughout with the macron (*ā*, *ē*, etc.) in the languages where it is usual to mark long vowels as such.

VII. Besides the Rev. W. W. Skeat's *Etymological Dictionary of the English Language*, many other books and philological journals were used, particularly Kluge's *Etymologisches Worterbuch der deutschen Sprache*, the fourth edition of which became available towards the close of the work. These works, with Lutzner's excellent but incomplete Old English dictionary in the second volume of his *Altenglische Sprachproben*, Stratmann's *Dictionary of the Old English Language*, and Sievers's *Angelsachsische Grammatik*, among others, furnished a solid basis for the Germanic side of English. For that part of our vocabulary which comes from French or other Romance languages, the reliance was mainly on Diez's *Etymologisches Worterbuch der romanischen Sprachen*, with Scheler's supplement, and the additions and corrections due to other scholars, and found in the periodicals *Romania*, and *Zeitschrift für romanische Philologie*, and elsewhere, together with the various lexicons, especially Littré's *Dictionnaire de la langue française*, and Godefroy's *Dictionnaire de l'ancienne langue française*, so far as it was available. The invaluable *New English Dictionary*, edited by Dr. Murray, could be used only for a second revision of a number of separate articles, almost all in the letters A and B, and for such words beyond the first letters of the alphabet as the first parts of that work threw light on incidentally.

GUIDE TO PRONUNCIATION.

§1. KEY TO THE SYMBOLS.

In the **RESPELLING FOR PRONUNCIATION** in the Dictionary, there is employed — as shown in the Table — a symbol for every clear vowel or diphthongal sound in the language; with, in four instances, a pair of equivalents for the same sound as occurring in different situations, viz.: ụ = o͝o, ụ = o͝o; ȯ = ọ; and e͡y (final) = ī; besides *a* and *e*, italicized, as these vowels are in certain cases obscured and turned toward the neutral form; also, apostrophe for the voice-glide; and ᴎ to indicate foreign nasalized vowels; — some of the sounds occurring only in accented and others only in unaccented syllables, and some others, with but slight difference of quality, in both; — the e is always of the "narrow" form in accented and the "wide" in unaccented syllables. The ä, ë, and ö are used to represent the similar sounds in foreign words, but not limited as they are in English to unaccented syllables. The ụ is employed, as the nearest English vowel we have, inexact as it is, to replace u French and ü German; and in like manner the ē for the eu French and ö German.

The consonant letters **b, d, f, h, j, k, l, m, p, r, t, v, w,** and **y,** and the digraphs **sh** and **ng,** are used with their ordinary normal value; **g, s, z,** and **ch** are each limited to a single sound; **n** and **th** are marked for one sound of each and used unmarked for the other. No use is made of **c, q, x,** or the digraphs **ph, gh, dg,** and **wh.** The principal substitutions made with each consonant symbol in the respelling are noted in the Table.

ACCENTS AND HYPHENS. The principal accent is indicated by a heavy mark (′), and the secondary accent by a lighter mark (′), at the end of the syllable. Syllable division is otherwise indicated by a light hyphen, a heavier hyphen joins the members of compound words.

The Table here appended, together with the preceding Table, furnishes a method of INDICATING PRONUNCIATION WITHOUT RESPELLING. It is, in its main features, the same as that employed in previous editions of the Dictionary, and will serve except in the case of a comparatively few words, which must be respelled. Use is made of it in this GUIDE TO PRONUNCIATION.

To each of the symbols here given, the equivalent is added that takes its place in the respelling (thus · ą = ŏ, etc; **what** = **whŏt,** etc, **c** = **k,** etc.). The unmarked letter in a digraph is to be taken as if silent, as in **breăk, brĕad, hāll, yĭeld, vẽil,** etc. Silent **e** at the end of syllables, as in **fate,** etc., or in the **ed** of preterites and participles, as in **baked, burned,** etc, need not be marked.

The method has diacritical marks applied to all such consonant letters and digraphs as offer especial occasion for their use. In other instances in which they might be employed (**z, gh, ti,** as in **nation,** etc.), it is better to dispense with them The sounds, as described, of **x, ph, qu,** and **wh,** unmarked, are what these characters will usually, but not invariably, represent.

STANDARD OF PRONUNCIATION.

§ 2. The ultimate standard of pronunciation for the English language is the usage that prevails among the best educated portion of the people to whom the language is vernacular; or, at least, the usage that will be the most generally approved by them. The pronunciation of this class of persons, all over the world, is for the greater part of the words of the language substantially uniform, and distinguished by only comparatively unimportant shades of difference.

There are, however, sundry diversities of importance which affect the pronunciation of a good many words. And there is no country or locality the custom of which can claim precedence as the everywhere acknowledged standard by which such differences are to be adjudged. The most approved pronunciation in London and the southeast of England is in some points different from what prevails anywhere else. But, notwithstanding the advantage connected with the metropolitan position, the usage of London and the vicinity is not really the standard for the other parts of Great Britain itself, in the sense of securing actual conformity, or even of being acknowledged as the model which should be followed. There are as yet but few of the best educated of the American people who are disposed to take the usage of London as the standard for their own pronunciation. Thus there is in fact no single absolute and universal standard to serve for every case.

Uniformity is to be preferred to diversity. There is no reason why it should be deemed desirable in itself to set up an American as opposed to a London or an English standard. But any fashion anywhere intrinsically bad should be avoided. As the nasal tone in speaking, which is yet too commonly heard in America, is a thing to be corrected, and would be such even if it had become the fashion in London, so any habit of pronunciation whatever that comes in as a change for the worse should be strenuously resisted, even if it should have gained foothold or have become the ruling mode in the higher circles in London.

The aim of a pronouncing dictionary should of course be to serve as an exponent of the usage which is the ultimate standard of pronunciation. In the case of diverse usages which have extensive prevalence, either within different local boundaries or side by side in the same community, a dictionary that is to serve for universal use should take note of each of them, without, however, being required to notice local peculiarities not approved by the best educated people This is all that the dictionary has to do, except that it may and should present the reasons, when such exist, which render one mode of pronunciation preferable in itself to another Its proper office is to indicate and record, not to dictate and prescribe So far as the dictionary may be known and acknowledged as a faithful interpreter of the actual usage, so far and no further, and in no other sense, can it be appealed to as an authority It is only in its representative capacity that a dictionary may ever be taken as itself a standard of pronunciation. This would still be true of any work of the kind that might exercise such influence and gain such ascendency as to become a universally accepted and virtually authoritative standard.

§ 3. The task assumed by a pronouncing dictionary is not easy of achievement.

Supposing no doubt to remain as to what is the actual usage to be indicated, even hen nothing more than an approximation to exactness can possibly be attained The sounds which we indicate by the same symbol, and which, it may be, we regard s identical or absolutely alike, have in fact only a certain general resemblance in ommon, and are subject to allowable variation within certain limits This is true niversally; while occasionally the limits are so wide, and the actual variations so onsiderable, that the symbols need to be especially noted as having only an indeterminate value as exponents of common usage, — as in the case of ô (ôrb), and of û ûrn), and ə (fərn), in this Dictionary (see §§ 87, 113, 139) What we mark in any ase is only a general type of sound. Each element undergoes variation as conjoined vith this or that other element in a syllable or in a word or phrase the ū (ūse, ūne, etc., § 131) is a signal instance. Pronunciation modeled after a common standrd will vary somewhat in different localities, and somewhat as given by different ndividuals in the same community, and even as given by the same person at different imes. Differences in stress, quantity, and pitch have effect upon orthoepical quality. n the case of unaccented syllables, there is in the vowels an obscurity and uncerainty, a want of uniformity in usage, and an allowable and proper variation according s the utterance is quite rapid or more or less deliberate, which make it peculiarly difficult to define and describe them precisely. The proper medium has to be sought between the indiscriminating fashion which would reduce these vowels to the smallest dimension, giving them all the same neutral sound at all times, and on the other hand a pedantic and affected precision which will deprive the syllables of their proper character as unaccented (see §§ 36–41).

There are, moreover, sundry uses of words in which some departure from the ordinary standard of pronunciation is allowable, or even absolutely inevitable. Violent emotion will subdue and bend the words to a fitness for the expression it strives after. It was aptly said by a master of dramatic art, Mr Henry Irving, "You can not stereotype the expression of emotion; . . . the speaker who is sounding the gamut of human feeling will not be restricted in his pronunciation by the dictionary rule" In singing, the exigencies of the art require certain deviations from the normal pronunciation of spoken words; though none are to be made without good reason. Poets now and then take liberties with the accent of words; and sometimes, in setting verse to music, violence is done in the same act to the proper accent of the verse and of the word; such deviations are, of course, exceptional.

The means of indication at command for a pronouncing dictionary are unavoidably imperfect. The fact will hardly be credited by those who have not tested the matter by special observation that it is impossible, in the case of some of our vowel sounds, to select for an example any word not subject to such diversity of pronunciation as to render it unfit to serve the purpose in other than a most imperfect manner. Yet this is and must be the chief means of indication to be employed.

This inadequacy is a cogent reason, in addition to others, for resorting to the positions and motions of the organs as a means of identifying the sounds. But this method also is beset with difficulties. The organs as employed in speaking are, for the most part, out of sight, and have to be observed through the tactual or the muscular senses; and these perceptive faculties require to be developed for this particular service by special training, and may sometimes need to be aided by artificial devices. In this as in every method there is required, of course, a discriminating ear for the articulate sounds of speech, which, like an ear for music, may be sadly wanting while the power of hearing is without defect When a correct description of the organic process has been furnished, there will still be some difficulty in applying the instruction, so long at least as the requisite training is neglected in our schemes of education. It is to be added that, in pursuing this method, some allowance is to be made for differences in the shape and structure of the organs in different persons, and for the somewhat different ways in which sounds nearly or essentially the same may possibly be produced.

Since no single method is perfectly adequate, the best attainable result is to be gained by employing the different methods that are any way available, and making one supplement the defects of another.

§ 4 In preparing the revised editions of this Dictionary issued in 1847 and in 1864, thorough endeavor was made to ascertain the actual usage which might properly be taken as the standard of correct pronunciation, whether in America or England The words in the vocabulary were marked in accordance with what was believed to be the pronunciation most generally approved by well-educated people in America; and, in cases of difference between American and English usage, or of divided usage in America or in England, and especially in cases of disagreement among authorities, there was added a reference to the statement of such difference or disagreement in the "Principles of Pronunciation," or else to the "Synopsis of Words Differently Pronounced by Different Orthoepists." In the present revision the same course is followed in these particulars, and the pronunciation as given in 1864 is retained, except when decisive reasons for a change have become apparent. In some cases of divided and unsettled usage, the word in the vocabulary is supplied with alternative forms The plan of respelling for pronunciation is adopted in this revision, as preferable on the whole to the former plan of diacritical marks without respelling; and the unaccented syllables are marked, as well as the accented, instead of being left to the guidance of general rules, — something of this kind being demanded in order to supply a want that has been felt, and that has previously been left unsupplied, mainly because of the difficulty of accomplishing the end in a satisfactory manner.

SYSTEM OF ENGLISH VOWEL SOUNDS.

Note. — The System of the Vowels which is here presented has for its basis the anner of their formation by the organs, and agrees, in its general features and the ain part of the nomenclature, with that advanced by Alexander Melville Bell and e same as modified by Henry Sweet, though differing from both in some points of nsiderable importance. A synopsis of the scheme is presented in the Diagram at e foot of the next following page.

§ 5. Vowel sound, whether uttered with tone as in speaking aloud or merely hispered, has its source in the glottis, that is, the vocal cords, or vocal ligaments, ith the narrow opening between them, in the upper part of the larynx (see Fig. 1) he vocal ligaments, with their membranous covering, serve to produce tone in eaking and singing, in just the way the lips do in blowing a horn or trumpet, — ith this important difference, that they have a capacity of adjustment for tone modution such as the lips have not. Whispered vowel sound is made by friction of the eath against the vocal cords or the arytenoid cartilages, which are not then drawn ose together as they are for tone vibration, and there is also, in most if not in all ses, some sound produced by friction in the passage through the mouth.

The sound thus originated is variously modified by resonance in the oral cavity, hich is molded to different forms by different adjustments of the flexible and ovable parts of the mouth, namely, the tongue, soft palate, jaw, lips, cheeks, and e walls of the pharynx; and hence arise the qualities by which vowels are distinished one from another. The nasal vowels, as in French, add a resonance in the sal passage, but a nasal tone is always a blemish in English speech, except in the oper nasal consonants, **n**, **m**, **ng** (§ 167).

In speaking aloud or in singing, the voice may be pitched higher or lower at pleasre, carrying with it all the while for any individual vowel the characteristic quality parted by resonance from the suitably adjusted oral cavity. The process is exained by Helmholtz as the reenforcement of a part of the compound tone that ues from the larynx. In a whisper, we have tones elicited from the mouth cavity such as come from a flute or an organ pipe so badly blown that the instrument refuses to speak but still gives out windy tones of recognizable degrees of pitch; and each whispered vowel has its own characteristic tone, which is of a definite pitch invariable for that vowel Thus, whether the vowel be voiced or whispered, it is the tone proper to the cavity as adjusted for the vowel, that serves, in the one way or the other, to produce the characteristic quality.

§ 6. Every part of the oral cavity — or, more precisely, the whole passage from the larynx at one end to the outer edge of the lips at the other — will more or less modify the sound, but for any one vowel, only a certain portion is instrumental in giving the characteristic quality by which it is individually recognized. This part, as thus employed and adjusted, may be called the VOWEL-CHAMBER for that vowel; through its action as a resonance chamber, the vowel quality comes into being. In the formation of a vowel-chamber, there is in every instance a PLACE OF CONSTRICTION* made by a more or less close approximation of some part of the tongue to the hard palate, or the soft palate, or the pharyngeal wall, on each side there is actual contact, leaving a passage through in the middle; for some vowels the lips are contracted, making a superadded place of constriction. The vowel-chamber consists of the passage at the place of constriction within the mouth, and together with this, in most cases, the cavity, or compartment, before or behind this place, — unless both the one before and the one behind be included. To make the vowel-chamber complete for a clear vowel sound, the lateral margins of the tongue are firmly applied all along to the sides of the pharynx and soft palate, or also still further on to the borders of the hard palate; and for the labial vowels the walls of the chamber are formed in part by the cheeks and lips. A tense condition of the soft parts of the walls is requisite for the resonance that is essential to the production of a vowel sound.

The position of the lower jaw is important, though in a subordinate and secondary sense, and through its connection with the organs directly concerned. Thus, when

* See *Vowel Theories*, by Alexander Graham Bell, in "American Journal of Otology," July, 1879.

depressed, it carries with it the under lip and lower teeth, stretches the cheeks, and allows of tongue configurations and positions otherwise difficult or impossible. The position of the lower jaw may sometimes affect indirectly that of the larynx, and even that of the soft palate. In all this field of inquiry, it is important to distinguish the incidental from the essential.

§ 7. The character of the resonance proper to any cavity, and thus to any particular vowel-chamber, will depend on the size and shape of the cavity, and together with this the nature and condition of the material of which the several parts of the inclosing walls are composed. The term RESONANCE, *as descriptive of the means by which vowel quality is imparted*, needs to be taken, however, as implying more than the simple resonance we should have if the sound were of outside origin, as the current of vocal breath strikes upon or rubs against the walls of the oral passage in one or another way or place, the effects thus produced will mingle with and otherwise modify those due simply to the size, shape, and structure of the cavity. Some of them will be really fricative, even in vocal speech, and thus similar in kind to such as characterize certain of the consonants. The specially effective agency may also be determined to a particular portion of a vowel-chamber, by the energetic action and tense condition of such part, and by a direction of the vocal current so as to impinge upon the same. The tone proper to the vowel-chamber as a resonant cavity simply, while it is a prime factor, is not the only factor, in determining the quality of a vowel.

We find this view of the matter confirmed, if we try to utter vowel sounds while drawing in the breath. We can by this process elicit vocal tone, but we can in this way make only a faint approximation to the vowel qualities evoked in the ordinary manner. And again, the flowing tones of the singing voice bring out these qualities less distinctly than do the tones of speech, which are, as we may say, thrown into the oral cavity, instead of flowing in.

Some vowels are taken more easily at a low and others at a high pitch. But this is due mainly, if not wholly, to the connection, by muscle and ligament, between the larynx and the root of the tongue, in consequence of which certain positions of the tongue favor the adjustment of the larynx for a higher and others for a lower pitch. A change in the pitch of a given vowel may thus involve some change in the shape of the vowel-chamber, but not so great as to forbid a sufficiently accurate definition of the several vowel positions

§ 8. For the vowel ä (ärm, äh), — with its "wide" variant å (åsk, påss, §§ 13, 61), — the constriction is made by approximating the extreme back part of the tongue to the back wall of the pharynx, the place is thus very near to the larynx and the root of the tongue (see Fig 1) Above this place, the vowel-chamber curves forward and opens gradually between the tongue on the one hand and the pharyngeal wall and soft palate on the other. It reaches no further forward than the front limit of the soft palate: the vowel gets its essential quality in the space thus bounded, though subject to some modification by means of parts of the mouth further forward, contraction of the lips, though it may impair, will not obliterate the characteristic quality of the vowel.

This may properly be denominated the OPEN-THROAT VOWEL, since it is formed in the throat and the parts adjacent, and with the throat in the upper or forward part quite open, neither obstructed nor constricted, so that the sound is reflected and thrown forward, directly and without hindrance, from the pharyngeal wall By the *throat* is here meant the *fauces*, — the passage that runs from the mouth to the œsophagus and the larynx, — the proper meaning of the word as applied to interior parts The peculiar formation of this vowel is a sufficient reason for separating it from the back vowels (§ 11), among which it has been ranked by Mr Bell these involve a constriction in the front of the throat The description here given makes clear the relations of this vowel to the two series of the front and the back vowels. — See §§ 12, 15, 57-69.

§ 9. For the two groups (§§ 10, 11) next to be mentioned, the constriction is made by approximation of the tongue to the hard palate in the one case and to the soft palate in the other, — thus in each case dividing the oral passage into two compartments, one of which, however, contributes so much more than the other to the quality of the vowel that this one may, together with the constricted channel, be properly regarded as the vowel-chamber

§ 10. When the constriction is made by arching up the tongue under the hard palate, we have the tripartite series, namely, ē (ēve), ā (āle), and â (câre), each member of which has also its "wide" variant (§ 13) These are denominated FRONT VOWELS, and otherwise are often called *palatal vowels*.

The three members of the series are distinguished as HIGH (ē), MID (ā, without the "vanish"), and LOW (â, without the glide to r) The change from ē to ā, and again from ā to â, is made by lowering the parts of the tongue before and in the front and behind and at the hinder end of the place of constriction, which is thus made shorter; the channel of the vowel-chamber at the place of constriction is at the same time made broader from side to side, but the distance between tongue and palate at this place need not be increased,* in each case the passage may be as close as it can be without consonantal friction. — See Fig 2

If we consider the vowel-chamber as made up of the passage where constricted together with the cavity behind this place, we may, as has often been done, compare it to a bottle with a narrow neck, — the neck curved forward somewhat like the beak of a retort, — and with the neck broader and shorter for the lower than for the higher of the series, and the body of the bottle differing in size and shape for the one and the other.

For the high, ē (ēve), the root of the tongue is drawn forward, also, the surface of the tongue back of the place of constriction and down toward the root is quite concave from side to side, and up and down as well; it becomes less and less so for the mid and the low, falling back with a more and more even slope, the arch of the soft palate is at the same time more and more flattened, and the lower jaw is of necessity more and more depressed, and is also drawn back; if it be not so drawn back, the soft palate will be dragged forward by the tongue, and thus a nasal twang will be inevitable. It is further to be noted that the most effective part of the vowel-chamber for the high (ē) may be perceived as extending not far back from the place of constriction, and as reaching further and further back for the mid and for the low.

The passage at the place of constriction and the larger compartment behind the same are two distinct resonant cavities, each having as such a pitch proper to itself. The investigations of Helmholtz, Graham Bell, and others have shown that, in passing from the low, â (câre), to the high, ē (ēve), the pitch of the forward portion rises; while, conversely, that of the cavity behind it becomes at the same time deeper, — as a consequence, of course, of corresponding changes of configuration.

For the front vowels in detail, see §§ 43-56, 75-84, 102-104

§ 11. When the constriction is at the soft palate, involving retraction and humping up of the tongue, we have another series of three, with their "wide" variants (§ 13), denominated BACK VOWELS, namely, o͝o (to͝od) HIGH, o͞ (o͞ld), without the usual "vanish") MID, and ạ (ạll) LOW, — differenced as the tongue is swelled up higher or less high in the back part of the mouth, and thus reaches to a higher or lower — or, what is the same thing, a more or less forward — point along the soft palate Thus, in the back as well as the front vowels, the place of constriction is longest for the high, shorter for the mid, and still shorter for the low, — shortened at the forward or upper end of the place for the back vowels, as it is at the rearward end for the front vowels The broadening of the vowel-chamber, the flattening of the arch of the soft palate, and the lowering of the jaw, in the change from high to mid and from mid to low, occur in the back as well as in the front vowels. The more and more gradual and regular, and longer and longer, slope of the surface of the tongue backwards in the front series, is paralleled, inversely, by a similar change forwards in the back series The extreme retraction of the fore part of the tongue for the high-back, o͝o (fo͝od), corresponds to the drawing forward of the root and hinder part of the tongue for the high-front, ē (ēve) — See Figs. 2, 4

All of the back vowels take a labial modification, and are thus of the class termed LABIAL, or ROUNDED, vowels. The high are more rounded, that is, have the lips more contracted, than the mid, and the mid more than the low. The vowel-chamber for all of the back vowels has its forward limit made by the lips, and takes in at the other extremity the place of constriction on the soft palate, the compartment below this place contributing but a comparatively unimportant part

The labial modification is quite indispensable for the back vowels If we try to "unround" them — that is, to utter them with the corners of the lips drawn far back, while holding the palato-lingual position unchanged — we succeed in getting only a kind of noise made by friction of the vocal current against the soft palate and uvula, with the loss of clear vowel quality We can, indeed, by retracting the tongue much more than is done for the normal back vowels, produce something strongly resembling them, with comparatively little help from the agency of the lips and cheeks But such sounds and such positions of the organs bear no part in correctly spoken English It is at the same time true that, to a certain extent, diminished lip-rounding may be fairly well compensated by increased retraction of the tongue.

The greater contraction and protrusion of the lips, and the greater retraction of the tongue and consequent greater dimensions of the cavity, — the depth of which is also increased by the upward bulging of the soft palate, — cause the high position for the back vowels to give a deeper resonance than the mid, and the mid than the low there is thus presented a correspondence in this respect with the back cavity of the front vowels

For these vowels in detail, see §§ 70, 71, 108-122, 126-128, 136-138

§ 12 In both the front and the back series (§§ 10, 11) the change of organic position from that of the open-throat vowel, a (arm), å (ask, § 8), is least for the low, and greatest for the high, this vowel being nearly related to the low in both series. It is thus properly to be regarded as the *common extremity*, or point of departure, for the two series, which proceed from it by a regular gradation, as is represented in the Diagram

§ 13 Each of all these vowels (§§ 8, 10, 11) has a variant denominated WIDE, as distinguished from the above described, the NARROW * We have ä (ärm) narrow, å (åsk) wide, â (câre) narrow, ă (ăm, căt) wide, ā (āle, without the "vanish") narrow, ĕ (ĕnd, pĕt) wide, ē (ēve) narrow, ĭ (ĭll, plt) wide, and ạ (all) narrow, ŏ (ŏdd) or ạ (what) wide, o͞ (o͞ld) narrow, ŏ (ŏbey) wide, o͝o (fo͝od) narrow, o͝o (fo͝ot) wide The place of constriction is widened out by increase of distance between the tongue and the palate or the pharyngeal wall, not only by drawing away the entire body of the tongue, but by reducing the convexity across the surface, that is, by letting down the tongue in this way toward the condition of indifference it

* See "Handbook of Phonetics," by Henry Sweet, p 211

* The *narrow*, so termed by Mr Sweet and others, were called the *primary* by Mr Bell.

The Diagram exhibits the arrangement of the vowels in the System and represents their relations, as explained in these pages, giving also their descriptive names. — See § 25

The ā (āle) and o͞ (o͞ld) are here to be taken as meaning only the radical part without the usual "vanish" (§ 18), and the â (câre) as apart from the "glide" to the r. For the back vowels, except the back-mixed, the term "round" (§ 11) is commonly added as part of the name Thus, ạ (all) is the low-back narrow-round vowel.

takes when in repose. For the narrow, the tongue is pressed with some force toward the palate or pharyngeal wall, making contact and meeting resistance on the lateral margins, and being thus *firmly braced in position*. For the wide, this pressure is not exerted, and this support is wanting; the tongue is merely projected into position, and leans upon nothing, or only spreads itself against the teeth or other parts on each side, and finds in any way but slight support, — hence the commonly abrupt character and naturally short quantity of the wide. "A sort of precision and firmness" in the one case, and the opposite in the other, have been emphatically noticed by Mr. Bell (*University Lectures*) as differentiating qualities of the "primary" and the "wide." — See § 21.

The widening causes change in the shape and size of the whole vowel-chamber. It makes it larger in the case of the front vowels (§ 10). In the case of the open-throat ä (ärm, § 8) narrow, å (åsk) wide, it is to be noted that for the narrow the fore part of the tongue is of necessity pressed downward and rather retracted, while for the wide it is projected forward and considerably raised, — in consequence of the widening at the place of constriction. Also in the back vowels (§ 11), the fore part of the tongue is necessarily less retracted for the wide than for the narrow; the labial rounding or contraction is at the same time less, and is made with less tension. The channel through the back part of the mouth is in all cases made larger for the wide. — See Figs. 1, 3, 5.

The changes in the form and position of the tongue, from the narrow to the wide, carry with them corresponding changes in the position of the lower jaw.

All the front vowels are converted from narrow to wide in the way shown for ā (cāre), in Fig. 3, and all the back vowels, as shown for o͞o (fo͞od), in Fig. 5.

§ 14. The narrow and the wide may, in a given case, be regarded either as different vowels or as different forms of the same vowel, but are commonly spoken of as different vowels. The two of each pair are perceived as characterized by the same fundamental quality, and as differentiated by features common to all the wide and the opposite appertaining to all the narrow.

§ 15. There are *intermediate degrees* of narrow and wide which need to be noticed (§§ 23, 48); and there are forms of forcible tongue pressure away from the palate, making vowels still more open than what we call the wide, and with prolonged quantity, as heard in certain provincial and rustic modes of speech (see § 50). There are also various *shades of sound* between the high and mid, and between the mid and low. And every vowel is subject to variations in position and in sound as conjoined with different consonants. These many and minute varieties can not all be defined with accuracy. In a vowel scheme for ordinary uses, only the more prominent and plainly distinguishable diversities are to be marked, and the fixed points on the scale are to be taken with some latitude of variation.

In the case of the *open-throat* or pharyngeal vowels, of which we have noted a narrow, ä (ärm), and a wide, å (åsk), a nicer analysis might give as many varieties, though not so strongly marked, as we have in the other groups, that is to say, a high, a mid, and a low, and of each of these a narrow and a wide. But, for ordinary orthoepical purposes, such a minute subdivision is unnecessary Only, when the wide å is prolonged, it takes a narrow form, but not identical with ä (ärm), being made with the place of constriction higher up in the pharynx The vowel quality, as made higher or lower in the way here described, will naturally vary with the higher or lower pitch of the voice. And it is to be remarked that the ordinary "Italian a" in English, as in **father**, etc , is heard in various forms as higher and lower in organic position The å (åsk) will, indeed, be ordinarily higher as well as wider than the ä (ärm). — See § 59

§ 16. (*a*) There is a fourth order of vowels in addition to the three above described (§§ 8, 10, 11), though it would not be altogether amiss to regard it as a variety running through the other three To this the term MIXED is applied in the Bell nomenclature. It comprises, in the English, û (ûrn), ŭ (ŭp), and ĕ (fĕrn, evĕr) Sounds of this order occur also in the first part of the glide between the initial and the final elements of the long ī and ou diphthongs (§ 19 *a*), and make the glide between any vowel not of the mixed order and a following r, to which consonant the mixed vowels themselves bear a close resemblance. Unaccented vowels tend, for the most part, to a sound of this sort, when they do not go over to the neutral vowel. — See §§ 17, 38, 39, 85-95, 105, 123, 124, 139-142.

These are called "mixed" because regarded as formed by a kind of blending of the organic positions for the front and the back vowels, or a neutrality between them. Though the term, as thus understood, is not wholly inappropriate, the more essential characteristic of this class is that the passage at the place of constriction — which in this case is both longer and much more open than it is for the other vowels — has the part of the tongue along the middle line depressed and the lateral borders raised, so as to form a sort of trough, and to make, in conjunction with the palate, a rough approximation to *a cylindrical channel* * Instead of a passage with cross section somewhat crescent-shaped, concave on the palate and convex on the tongue, as for other vowels, we have a passage concave on both tongue and palate. And this passage may be regarded as constituting the entire vowel-chamber, being, as it is, the main and the effective portion of all that might be included in the designation.

(*b*) The vowels of this class may properly be subdivided into FRONT and BACK, and under each may be distinguished a HIGH, a MID, and a LOW; also, under each of these, a NARROW and a WIDE. The front-mixed are made mainly under the hard palate, and the back-mixed mainly under the soft palate. For the high of each the vowel-chamber reaches well forward, and in the change from high to mid, and again from mid to low, falls back somewhat in place, and is made larger in dimension. The English û (ûrn), narrow, and ŭ (ŭp), wide, are mid-back-mixed; ĕ (fĕrn), narrow, and ĕ (evĕr), wide, are mid-front-mixed. The high-front-mixed, — which, labially rounded, make the u French and ü German, — we have in English as the brief initial element of ū (ūse, § 132).

The high-front-mixed, just above described, are closely related to the high-front vowels, ē (ēve, § 10) and ĭ (ĭll); the mid, ĕ (fĕrn, evĕr), to the mid-front, ā (āle) and ĕ (ĕnd); a variant pronunciation in **fern**, **earn**, etc., low instead of mid, — more common formerly than at present, — is nearly related to the low-front, å (cåre). The mid-back-mixed, û (ûrn), ŭ (ŭp), have a similar relation to the mid-back, ō (ōld) and ŏ (ŏbey), though not so obvious, because these (ō and ŏ) are labially rounded, while the û and ŭ are not so, or but slightly if at all; a variety, low instead of mid, heard as a dialectic or an individual peculiarity in the pronunciation of these vowels, has a quite obvious affinity to the open-throat, ä (ärm), å (åsk) The Diagram exhibits these relations in the leading instances. The existence of the relations as here pointed out justifies the introducing of such terms as front-mixed and back-mixed

The û (ûrn) and ĕ (fĕrn) are distinguished as *narrow*, from ŭ (ŭp), ĕ (evĕr), *wide*. They are marked as such by the essential characteristics of the narrow and wide of the other groups (§§ 13, 21); only in this case we have for the wide a concavity made less deep, instead of a convexity flattened down, and we have the bracing action for the narrow made by a pull downward on the middle line and a firm pressure at the sides. It is no matter if, by a partial change in signification, of a kind not uncommon in scientific as well as in popular language, it so comes about that the wide have the interval between tongue and palate no greater in this case than the narrow, since the essential and more important characteristic remains, as before described (§ 13)

(*c*) The rounding of the tongue in these vowels produces an effect for the ear somewhat like that of lip-rounding Tongue-rounding and lip-rounding are combined in the French **eu** and **u**, German ö and ü The term *tongue-rounded* would in fact describe the whole class more accurately than *mixed* It is to be noticed that the lip-rounding takes a characteristically different shape in the mixed from what it does in the back vowels There is some degree of lip-rounding in ū (ūse), and even a slight degree in ĕ (fĕrn)

(*d*) The mixed vowels are closely allied to the consonant r, into which they are

Each Arytenoid is a pyramid with a triangular base, of which the outer angle (not seen in the engraving) rests upon the Cricoid, while the inner front angle holds the end of a Vocal Ligament, and the inner angle in the rear is held fast by a short ligament to the Cricoid. The Arytenoids serve as levers for moving and adjusting the Vocal Cords. When the Cords are brought close together, the passage between the Cartilages may either remain open or be closed closed by the joining, and opened by the disjoining, of their front edges, from the bottom to the top, — the Transverse Muscle barring the way behind at all times. The False Vocal Cords have no direct agency in phonation.]

converted by raising the point of the tongue toward the palate (see § 250). Hence, they form the glide connecting r with vowels preceding. The mid-mixed ə (fərn, evər) is more nearly allied to the dental r (§ 251), and the low-mixed to the palatal (§ 252). It is through the influence of the following r that the present sound of ə in fərn, hər, etc., and of ɪ in fɪr, sɪr, etc., has been developed from the original sounds of ŏ (ŏnd) or ă (ăle), and ĭ (ĭll) or ĕ (ĕve).

§ 17. The English vowels of the mixed (§ 16) class are the nearest to the obscure sound of the so-called NEUTRAL VOWEL, otherwise named the *natural vowel*, — that is, the vocal sound produced with the least articulative effort, or with none at all, and heard, except as a glide, only in unaccented syllables. The latter differs from the former in being made without the concave configuration of the tongue, and with a less tense condition of the organs. It admits of considerable variety of tongue position. Every short vowel is liable in very rapid speech — though some more than others — to fall into it (see §§ 38, 39). We have it also in the voice-glide (§ 95), heard in the final syllables of words like **open, able,** and of words (really dissyllabic) like **chasm.** The glide (§ 161) from vocal consonant to vowel, as in **go, day, low,** etc., and from vowel to consonant, as in **ebb, add, oar,** etc., goes through the neutral vowel in most cases. So does the glide within diphthongs (§ 19 *a*).

§ 18. The *nineteen* (see Diagram) as above described, aside from the neutral vowel, but inclusive of the initial element in ū (ūse, §§ 19 *b*, 132), make up the complete list of the SIMPLE VOWEL SOUNDS, or of what need to be noted as such (§ 15) in English. The ī (īce, § 100) and the ū (ūse, § 132) are diphthongs. Also, ā (āle, § 45), with the usual vanish in ĭ (ĭll), and ō (ōld, § 109), with the vanish in o͝o (fo͝ot), are diphthongs

§ 19 (*a*). The PURE DIPHTHONGS in English are made up as follows: — (1) The ī (īce, § 100) consists mainly of the glide between the initial and the final element, no one part having predominance. It begins with ä (äsk, § 61), or a sound nearer to ŭ (ŭp, § 141), and proceeds through sounds of the mixed order (§ 16), followed by those of the neutral vowel, on to the final element ĭ (ĭll, § 103). As usually pronounced, it differs somewhat from the word **aye** (yea) this begins with ä (ärm, § 57), and also gives more prominence to the initial element and somewhat more to the final, and less to the connecting glide. (2) The **ou** (**out,** § 129) is like ī (īce, §§ 99, 100) in having no part predominant; also, in beginning with the same element, it then takes a different direction, through sounds of the mixed and the neutral order, with gradually increased labial rounding, and terminates in o͝o (fo͝ot, § 128) (3) The **oi** (**oil,** § 129) begins with ạ (ạll, § 70), or a sound between this and ŏ (ŏdd, § 118), taking it for the main part, and glides on to ĭ (ĭll, § 103) Both (4) ā (āle, § 45) and (5) ō (ōld, § 109) with the usual vanish, give much the greater prominence to the initial element. (6) The ū after certain consonants — as in **lūte, jū'ry, sūit, dūke, tūne,** etc. (see § 134) — begins with the high-front mixed vowel allied to ĭ (ĭll, § 16 *b*), and, without taking the y sound, glides on to o͝o (fo͝od, § 127), and has that for the main part.

(*b*) The following, as taking a semivowel y or w sound within the glide, are IMPURE DIPHTHONGS: — (1) The ū (ūse, pūre, § 132), or **ew** in **few,** etc, differs from the ū in **lūte,** etc. — the pure diphthong No. 6 above, — by interposing the y sound as part of the glide between the initial and the final elements. (2) There are several impure diphthongs that begin with a brief ĭ (ĭll) and run through y to different endings; as the **ea** in **malleable** — when pronounced măl'lyȧ-b'l (§ 97) — the **eou** in **nauseous,** the **eu** in **grandeur** (§ 97), the **ia** in **cordial, filial, familiarity, iou** in **bilious, iu** in **genius, io** in **minion** (§ 106), also, **ya** in **yarn, you** in **young, yo** in **yore,** and **yaw** in **yawl,** when uttered, as is commonly done, with a brief initial ĭ sound (§ 272). (3) The other kind of impure diphthong begins with a brief o͝o (fo͝ot, § 128) sound, and glides through a more or less complete consonant w on to the final vowel sound, as in **quail, quite, quality, guano, swim, swan, swell, when,** etc, and may be heard even in **warn, wish, well, woe, we,** as usually pronounced (§ 266)

(*c*) Of the pure diphthongs, it is to be noticed that they all proceed from a place of constriction further back in the mouth to one more forward, or from a low to a high vowel, — that is, from a more open to a more close palato-lingual position, or else, as the ū in **lūte,** etc., No. 6, from a more open to a more close lip configuration. The impure diphthongs with y for the connecting glide proceed in a backward direction from their high-front starting point, and those with the w glide proceed from a more close to a more open lip configuration the consonant glides in these cases are generated by the relaxation from vowel tension that ensues in passing from close to open.

(*d*) The vowalized r (§ 253), when this form is used, — as in **far, ear, ire, more, worm, earth,** etc., — is usually a sound of the mixed (§ 16) class; and may either be added to the preceding vowel as a separate sound, or may in conjunction with it make a diphthong of a peculiar kind. Besides this sort, and that heard, as stated above (*b*), in **grandeur, nauseous, bilious, genius,** etc., and the long ĭ, preferred by some, commencing with a mixed vowel sound, — ŭĭ instead of ȧĭ, — other possible diphthongs with mixed vowels bearing a part as initial or final elements are not actually heard in English, unless as dialectic or individual peculiarities.

(*e*) In uttering a diphthong, the organs are not held anywhere in a fixed position, but proceed by a continuous glide from beginning to end; only the change goes more slowly to or from any element that appears to predominate. This is true even of ā (āle) and ō (ōld) as uttered with the "vanish."

§ 20. The terms OPEN and CLOSE may be applied to describe either the difference of low, mid, and high, or that of narrow and wide, — or that between the open-throat vowel and any or all of the others. They are thus wanting in exactness. We can not say, for instance, of the low-front-narrow ȧ (cȧre), that it is more or less open than the mid-front-wide ĕ (ĕnd), or even the high-front-wide ĭ (ĭll), — see §§ 10, 13. It is impossible to arrange all the vowels on a single linear scale, or even on two single lines, as more or less open and close. We can say, however, of the ä (ärm) that it is the most open of all

§ 21 Among the vowels as narrow and wide (§ 13), there are certain important relations as concerns LONG AND SHORT QUANTITY. Some are naturally long, and can not be shortened beyond a certain limit without a change of quality. Others are naturally short, and can be prolonged only by a special effort. All the wide are naturally short, and the narrow naturally long, because of the fixed, braced position of the tongue in the latter case and the opposite in the former (§ 13). Also, the wide require a greater expenditure of vocalized breath to produce the proper resonance in the wider passage, and hence are not so easily prolonged, and can not possibly be prolonged to an equal extent; their duration being limited simply by the supply of air from the lungs. The narrow long vowels, when shortened, verge toward the wide; the shorter wide, when lengthened, tend to the narrow, or may turn to a still wider, or rather a more open, form — See §§ 15, 30, 37

§ 22 The sounds symbolized by ā, ē, ī, ō, ū, as being the most frequent of the long sounds denoted by these letters, are called their REGULAR LONG sounds, and, for the like reason, ă, ĕ, ĭ, ŏ, ŭ, their REGULAR SHORT sounds. The regular long and short of the same letter are, however, in no case variants of each other, as narrow and wide, or a the long and short of the same sound This discrepancy is a consequence of changes in orthoepic quality which the long or the short, or both, have undergone since their place was fixed in the general orthography of the language.

§ 23 The regular short vowels ă, ĕ, ĭ, ŏ, ŭ (ăm, ĕnd, ĭll, ŏdd, ŭp; păt, pĕt, pĭt, hŏt, hŭt), pronounced in the proper English way, are a marked peculiarity of the language The vowel sounds that, in the other languages of Europe, come nearest to any of these are, for the most part, considerably less wide. Hence, people bred to those languages find it difficult to give these sounds with precision The foreign variation is also habitual with the people of Scotland. In the peculiar English manner, these sounds are distinguished by a brief, abrupt, jerky form, and by ending with a sharp percussion in the consonant that closes the syllable

§ 24. All the regular long vowels, as also all the diphthongs, may form the closing element of an accented syllable (as dāy, ō'vĭl, ĭĭ'ar, etc), while the regular short naturally have the syllable closed by a consonant sound (as ăt'om, cŏp'y, cĭt'y, etc, though such words as **con-dĭ'tion, nā'tion-al,** etc, can not well be so divided in writing and print. Even as unaccented, four of these, namely, ă, ĕ, ŏ, ŭ, — that is, all except ĭ and of course its equivalent ẏ, — are commonly joined on to a following consonant sound unaccented a ending a syllable takes usually the mark ă or else ă, u takes ŭ or ụ, e and o take ĕ and ŏ — See § 275.

§ 25 The relations of the vowels, as respects organic formation, — carrying with them also corresponding acoustic relations, — are represented in the Diagram on p xxxiv. We have the front and the back series of the narrow, diverging from the narrow ä (ärm), and of the corresponding wide, diverging from the wide ȧ (ȧsk), from which starting points the two series proceed by successive steps of change in organic position, while between ä (ärm) and ȧ (cȧre) the connection can be equally well traced, as indirect, through their wide forms, ȧ (ȧsk) and ă (ăm). We have the vowels of the mixed class interpolated under others to which they are nearly related. We have ȧ (ȧsk) in proximity to ă (ăm) and ŏ (ŏdd) and ŭ (ŭp), to all of which it is closely related by organic position. And throughout we have nearness of organical relation indicated by proximity on the diagram. The neutral vowel, as having no fixed place of articulation, is not included in the scheme.

ACCENT, QUANTITY, AND EMPHASIS, AND THEIR RELATIONS TO THE QUALITY OF VOWEL SOUNDS.

§ 26. ACCENT, in the wider sense, may be defined as the prominence given, or the act of giving prominence, by whatever means, to one syllable over others in a word or in a phrase, when not bestowed in the way of emphasis. Or it may be defined as a mode of utterance that gives such prominence. The prominence thus customarily accorded, in the case of any word, is called *the accent* of the word. Accent serves to mark the unity of the group of syllables composing the word or phrase, and is a help to fluency in utterance. The accent is an essential part of the form of a word; and sometimes makes the only difference in form between two words that have, it may be, totally different meanings, as, **in'cense** and **in-cense'**; the word **co-erce',** if the accent be transferred to the first syllable, will be heard as differing but slightly from a deliberate utterance of the word **coarse.**

EMPHASIS has a general resemblance to accent in the means it employs, but, instead of being fixed by habitual usage, it varies with occasions It has for its office to make prominent and impress, and oftentimes to color and modify, and to suffuse with emotion, the idea or meaning conveyed. It usually falls on whole words or groups of words, — though sometimes on significant parts of a word, such as the prefixes **un-, dis-,** etc. In the latter case, accent will give way to emphasis; as it obviously may do in the case of a phrase. For the purpose here in view, it is a matter of indifference whether what we have in any instance be accent or emphasis.

§ 27. A PHRASE AS SUBJECT TO ACCENT is one consisting, either wholly or in part, of monosyllabic words, among which the prepositions, conjunctions, pronouns, the articles, and verb auxiliaries predominate. The more unimportant members fall naturally, and thus habitually, into less prominence in expression; — the same principle worked at an early period in fixing the accentuation of words. Both phrase and word accent bear an important part in the rhythm of verse.

§ 28. Accent, in the general sense as above, may be effected by greater *stress*, or by longer *quantity*, or by a distinction of *pitch*, in the accented syllable, — or by any two or by all of these combined Accent, in a more special sense, may signify that — whether stress, quantity, or pitch — by which the syllabic prominence is effected. Accent, considered as made by stress alone — or, it may be, by pitch, — is quite commonly thus contradistinguished from quantity, — see § 33 Emphasis not only employs the same means and in like manner as accent does, but makes use of stress, quantity, and pitch, all and each, in various ways peculiar to itself, — the exposition of which lies within the province of works upon elocution and oratory.

§ 29. PITCH — that is, modification of voice as high or low on the musical scale — is not a recognized element in English accentuation, as it has been and is in that of some languages, — notably in the ancient Greek. Yet even in English, in the speech of some persons, and in some dialects, it appears as such in a noticeable degree, combined with one or both the other elements.

§ 30 QUANTITY means the length of time occupied in uttering either a syllable or an alphabetic element Vowels are distinguished as *intrinsically*, or *naturally*, long or short (§ 21), according as they can or can not be easily prolonged, and as they do or do not resist being made short; consonants also are distinguished as *continuous* and as *momentary* (§ 176), syllables, of course, take character from their components. As applied to the syllables in an English word or phrase, quantity may ordinarily best be understood as not necessarily signifying any intrinsic quality in the vowel of the syllable. a relatively long syllable may be made by prolongation of the vowel or the consonant elements, or of both; or may be made such virtually and in effect by a pause, or rest, at the end.

§ 31. STRESS — in speech — means force of utterance. This force is resolvable, in

the last analysis, into muscular tension, — tension, be it observed, not merely of the muscles that drive the air from the lungs, but of those which stretch and stiffen the vocal cords for tone vibration, and of those which hold the mouth organs in the various positions and configurations for vowel resonance, and move or hold them for the consonant articulations. We thus have reaction against, as well as direct propulsive action upon, the vocal current. And much of this reaction goes not to increase the loudness, or power, of the sound, but to impress upon it certain modifications with greater distinctness and effectiveness. Thus, the prominence given by accentual stress is not merely due to greater loudness, or intensity, of sound; but sometimes as much, if not more, to the fuller distinctness of the articulation.

Besides simple accentual stress, we shall have occasion in the sequel (§§ 163, 164, 275) to consider stress as laid upon different parts of a syllable, or of a vowel or consonant element, — namely, the beginning, middle, or end, — and as gradual or abrupt.

§ 32. Stress in utterance is a thing of degree, and is entirely relative. The nearest to an absolute determination is found in the least stress with which a syllable can be uttered and yet be perceived as a syllable. Above this least degree in one syllable or more, other degrees may exist in other syllables of the same word, and thus form a ground for distinguishing a primary, a secondary, or even a tertiary accent.

§ 33. In English, stress is the chief, and is commonly regarded as the sole, constituent of accent. Yet, quantity is ordinarily combined with stress. that is to say, syllables that take the absolutely least degree of stress commonly take, at the same time, the absolutely shortest quantity, that is, the shortest possible for the syllable, and with higher degrees of stress there go corresponding prolongations in quantity, — and quantity, in its turn, carries stress along with it. The two things are separable, but, in English, the two are ordinarily combined, so that an increase or diminution of the one involves an increase or diminution of the other. — See § 30.

§ 34. The syllable or syllables that, in a word or phrase, may be uttered with the absolutely least stress and quantity — or with a near approach to this quite least degree — are said to be UNACCENTED. The one syllable which takes the relatively greatest stress and prolongation is, of course, an ACCENTED syllable. In many words of several syllables — usually of more than three — there is occasion to note two accents, a stronger and a weaker, denominated a PRIMARY and a SECONDARY accent, distinguished in this Dictionary by a heavier and a lighter accentual mark, as, *e. g.*, **mag'ni-fī'er, af'fa-bil'i-ty.** There is, in many three-syllable words, such a secondary accent. It may fall on the first syllable, as in **un'der-take', con'tra-dict'**; in which case it is usually marked in dictionaries. Or it may fall on the third and final syllable; as in **mag'ni-fy**, the final syllable of this word having equal stress with the third in **mag'ni-fī'er**, and thus differing from the third in **van'i-ty**, and as in the verb **proph'e-sy**, which differs from the noun **proph'e-cy**: in such cases it is not the custom to insert the accent mark, in this Dictionary, when the vowel of the syllable is long, the secondary accent is implied by the mark of long quantity; as, **mag'ni-fȳ, ded'i-cāte, tur'pen-tine.**

There are, also, words of two syllables, neither of which can be properly spoken with the absolutely least stress and least quantity, such as **a-men, fare-well, conquest, horse-rake, house-top**, including most of the two-syllable compounds, and many words not of that class. as joined with other words in a phrase or a sentence, the more feebly accented of the two syllables has accentual prominence above the unaccented syllables with which it stands associated. Thus, the ĕ in **wine'-prĕss, ab'scĕss, con'tĕst, ac'cĕss, re'grĕss**, etc, differs from the ĕ in **heir'ĕss, tall'ĕst, ax'ĕs, Con'grĕss**, etc. There may be as strong a secondary accent employed in **dis-taste', dis-prove'**, etc., as in **dis're-gard', dis're-pute'**. It has not been common to mark such words as taking a primary and a secondary accent; one of the syllables having been reckoned as accented, and the other as unaccented; though the fact of the two accents is sometimes noticed by grammarians. The *New English Dictionary* by Dr Murray gives the two marks in the case of **a-men** and a number of two-syllable compounds, and the same is done in this work.

There are no principles by which to determine the accent in English, and in many cases some variation from the more customary form will pass unnoticed. The general tendency of the language is to carry the chief accent back towards or to the first syllable. In the case of some two-syllable words, the final one is accented for the verb, and the other for the noun or adjective; as, **con-test'** and **con'test, sub-ject'** and **sub'ject, ab-sent'** and **ab'sent**, etc But many others are accented alike for both noun and verb, as, **de-feat', re gard', at-tack', cap'ture, ges'ture, al-ly', re-mark'**, etc.

§ 35. It is to be observed that there are distinguishable degrees and shades of accentual stress and quantity, besides the two which we mark as primary and secondary. No less than four or five degrees may be found in some single words, such, for instance, as **incommunicability.** Also, there can be, in this matter, no precise determination of degree, and hence it becomes, in many cases, a nice question for decision as to whether a syllable should or should not receive the mark of secondary accentuation. Initial and final syllables usually make no more than a quite near approach to an absolutely least accent; this falls more commonly and properly upon medial syllables.

§ 36. That differences of accent will have effect in MODIFYING OR CHANGING THE QUALITY of articulate elements is evident from the foregoing definitions of stress and of quantity. Certain of the elements require a considerable degree of articulative stress and some extent of time for their clear enunciation; while others are compatible with a more relaxed, or less tense, condition of the organs, and with a quicker deliverance of the sound. It is, however, the quantity, and not the stress, that directly affects the quality. — See §§ 30, 33.

§ 37. All the naturally LONG VOWELS (§ 21) and the DIPHTHONGS are under accentual stress, either primary or secondary (though indicated in the Dictionary, it may be, sometimes only by the vowel quantity): they never occur under the weakest stress; they can not suffer weakening or loss of accent without alteration of quality. Thus, ē (**ē-vent'**, § 78) differs in quality from ē (ēve), ī (**ī-de'a**, § 101) from ĭ (**Ice**); although, as thus weakened, these do not come down to the absolutely least accent; — see §§ 21, 42. The ă in **sen'ăte** is nearly as wide as the ĕ in **bon'nĕt.** The second ē in **ce'rē's'**, when it turns to ĕ in **ce'rĕ-al**, is hardly distinguishable from the quite wide ĭ in **se'rĭ-al.** The ō in **ō-bey'** and ĕ in **ev'ĕr** differ from ō (**ōld**) and ĕ (**fĕrn**), simply as wide from narrow. The narrow ŏ of **in-fŏrm'** becomes the wide ŏ in **in'fŏr-ma'tion**; the narrow ō (**ōld**) in **im-pōse'**, the wide ŏ (**ŏ-bey'**) in **im'pŏ-si'tion**; the narrow ä (**ärm**) in **bär'ba-rous** is considerably widened in **bär-ba'ri-an**, if it does not indeed become the quite wide å (**åsk**). — See § 15 and the Diagram. A diphthong, when deprived of accent, is necessarily curtailed, — either preserving the middle portion (§ 19), as **mŭ-lord'** (my lord), or the middle and terminal element, as in **ī-o'ta** (§ 101) or the terminal, as **mī-lord'**; — if, indeed, this last be not a survival rather than a development.

§ 38. Among the naturally SHORT VOWELS (§ 21), there are differences to be noted. The high-front-wide ĭ (**pĭt**, § 104) undergoes but slight alteration as deprived of accent. Thus, between the vowels in the accented and the unaccented syllables in **pĭt'ĭ-ful, flĭn'lsh, ĭn'flĭ-nite, ĭn-stĭl'**, there need be only a slight and hardly appreciable difference in quality. The mid-front-wide ĕ (**ĕnd**, § 83) with least accent, tends to ĭ (**ĭll**); as in **rĭv'ĕt, kitch'ĕn, rĭv'ĕt-ĕd, heĭr'ĕss-ĕs.** In situations where it holds its proper quality but slightly modified, — as in **ĕf-face', ĕx-ist'**, — though weakened, it does not sink to the degree of least accent; but here, in very rapid speech, it may fall into the neutral-vowel sound (§ 17). The low-front-wide ă (**ăm**, § 56) is never given with quite the least accent, yet it may have a weakened accent, with a slight modification of quality; as in **ăt-tack', ăf-ford', ăl-low', ăc-cept'**; and in rapid speech may change to å (**åsk**) and then fall to the neutral place, — and especially in unemphatic monosyllables, such as **ănd, ăn, ăm, thăt**, etc. The ă can not itself gradually pass into an obscure vowel sound. It is apt to drop forward into ĕ thus **ăccept** and **ĕxcept** are not distinguished by the illiterate, and **căn** in vulgar speech becomes **kĕn**, and even **klu.**

§ 39. In the other naturally short vowels, there is a general tendency, on the remission of accent, to fall towards or sink into the neutral-vowel sound (§ 17), a sound which is taken only by syllables with the least accent. The ŏ in **cŏn-nect', rec-ŏl-lect'**, etc. (§ 120), has some tendency this way, but rather adheres to its proper sound, yet as modified and somewhat obscured, but does not, in such case, take quite the absolutely least accent. The letter o in final syllables with the least accent, as in **fel'on, at'om, big'ot, act'or**, etc (§ 121), may be regarded as first taking a ŭ sound as in **sŏn**, or a sound of that class, whence it often passes over to the obscure neutral sound The u in **aw'ful, ful-fil'**, etc (§ 138), has some tendency to the neutral quality, but is well able to retain its proper sound somewhat modified. The å (**åsk**) and ŭ (**ŭp**) need suffer but slight alteration by the weakening or loss of accent, as in **so'fà, bot'à-ny, cau'cŭs, ŭn-done'**, etc., — partly perhaps because they are so near to the neutral vowel.

§ 40 The TENDENCIES, on the remission of accent, may be SUMMED UP as follows. — The narrow long vowels tend to the wide form, — see §§ 21, 37, and the Diagram Of the wide short vowels, those at the three extremes of the scale, namely, å (**åsk**), o͝o (**fo͝ot**), and ĭ (**ĭll**), and also the mixed ŭ (**ŭp**), have their quality but slightly changed by loss of accent, — ĕ (**ĕnd**) and ă (**ăm**), of the front group, tend in the forward direction, though ă (**ăm**) has equal proclivity toward å (**åsk**) or ŭ (**ŭp**) and thus to the neutral vowel, — for all the wide back vowels, namely, ŏ (**ŏdd**), ŏ (**ŏbey**), u (**full**), or o͝o (**fo͝ot**), the tendency is to the neutral form; into which, indeed, every short vowel will sometimes fall. In general, the narrow and long, when shortened and widened, may then further, in very rapid speech, take the course of the wide short vowels, as indicated above — See § 48.

In hurried and careless colloquial speech, these modifying and obscuring tendencies, in both word and phrase, are intensified. Such colloquial usage, however prevalent it may be, will be acknowledged as a deviation from the standard of correct pronunciation. In England, the virtual obliteration of the secondary accent of words is a common fault. The opposite error of exaggerating the secondary accent is more or less common in America, but only to a limited extent among the well educated.

§ 41. These tendencies take the REVERSE DIRECTION when, instead of accent remitted or weakened, we have the quantity of a vowel, or both the stress and quantity, increased In all cases of quite deliberate speech — as in oratorical delivery, and especially in that most effective kind of emphasis which makes use of long-drawn time, — also in the measured recital of verse, — we have increased quantity and stress upon both unaccented and accented syllables; while yet their relations to each other as such remain unchanged. The ordinarily obscured vowels of unaccented syllables are then and thus made to take some clear vowel sound. It is often a nice point to determine what the sound is that is thus to be taken. It should be, if possible, in every case, a sound between which and the obscure unaccented sound a gradual transition is possible and natural and easy. It will not, indeed, for the most part, reach the exact and full sound proper to the vowel as accented; — thus, in the word **sen'ăte**, however deliberately spoken, the vowel in the final syllable would never take the exact sound it has in the word **fāte**; — see § 42 But it should make a more or less near approach to this, — yet retaining enough of the modified form to indicate that it belongs to an unaccented or weakly accented syllable.

§ 42. In the marking of the pronunciation of unaccented syllables, in this Dictionary, the intention is to give in each case — the *e* in **pru'dent, nov'el**, etc. (§ 94), and *a* in **in'fant, o'ral**, etc. (§ 69), excepted — the mark of that one of the clear vowels employed in accented syllables to which the unaccented vowel is to be considered as making the nearest approach when properly uttered in quite deliberate speech; as, **ĕx-press', ăd-mit', cŏr-rect'.** The sound thus indicated should at all times be held clearly in the mind of the speaker. In the case of the naturally long vowels when under weakened accent (ā, ē, ī, ō, ū), it would, in theory, have been sufficient to retain the mark they have when fully accented (ā, ē, ī, ō, ū), but, as a practical matter, it is doubtless best to indicate the modified sound by a modification of the mark The absence of accent sufficiently distinguishes the wide ĕ in **ev'ĕr, pa'pĕr**, etc., from the narrow ĕ in **fĕrn, mĕr'cy**, etc.

THE VOWELS OF THE ALPHABET IN DETAIL.

A.

§ 43. This letter is employed for eight variations of sound: ā; ă; å; ä; â; ȧ; ą; besides the exceptional sound as in § 47, and the sound of obscure quality, indicated by *a* italic (§ 69). For a as part of a digraph, see §§ 44, 49, 54, 57, 70, 76, 82, 85, 99, 104, 108, 113, 131.

§ 44. (1.) Ā, ā; as in **āle, fāte, māk'er, pro-fāne', pā'tri-ar'chal.** Th sound is otherwise represented, as in **pain, day, gaol, gauge, break, veil, whey**, also **aye** (ever); and is the name sound of the letter. The vowel is commonly called "long a."

§ 45. We have here the mid-front-narrow vowel (§ 10); of which the wide (§ 13) correlative is ĕ (**ĕnd**). Taking this for the main element, the English ā commonly

ends with a vanish — a brief terminal sound — in ĭ (III), sometimes running even to ŏ (ĕve). As thus spoken, the vowel is really diphthongal (§ 19 *e*) — made with a continuous glide, — though with much less rapid change near the initial than near the vanishing element. The vanish comes out more clearly in some syllables than in others. It is not used in the Scottish dialect; and is not apt to be given by people of foreign birth and training.

§ 46. There is some diversity in the sound of this vowel, as spoken by different persons and as occurring in different words; not only as concerns the vanish, but as the sound verges more or less toward the lower and more open vowel, ă (câre, § 49), or is even made identical with that; the more open form occurring mainly as an archaic survival.

§ 47. The radical part of the ā sound, widened usually so as to be undistinguishable from ĕ (ĕnd), is the exceptional sound of **a** in **a'ny, ma'ny, Thames,** and of **ai** in **said, a-gain', a-gainst'**; — see § 82.

§ 48. (2.) **Â, ă**: a modification of the preceding vowel in syllables without accent; wider (§ 13), ranging between ā (āle) and ĕ (ĕnd), and never taking the vanish (§ 45). It occurs in the endings **-ace, -age**, as, **pref'ăce, sol'ăce, rav'ăge, ad'ăge**, etc. The ending **-ate**, in the case of verbs, takes ā (āle), with accent, primary or secondary (though with the secondary accent not marked in the Dictionary); as, **re-lāte', ad'vo-cāte** (*v.*), **em'u-lāte, con'ju-gāte** (*v.*), **ag'gre-gāte** (*v.*), etc.; while, in the case of nouns and adjectives, ă without the accent is commonly used; as, **sen'ăte, prel'ăte, ad'vo-cāte** (*n.*), **ag'gre-gāte** (*n.*), **con'ju-gāte** (*a.*). Also, ă often occurs as preceding another vowel — usually accented — in the following syllable; as, **ă-e'ri-al, chă-ot'ic, Ju'dă-ism.** In words like **mis'cel-lă-ny, sal'u-tă-ry, sump'tu-ă-ry**, the **a**, before **ny** or **ry** final, and with the preceding syllable unaccented, has properly this sound; but if the preceding syllable be accented, as in **bot'a-ny, di'a-ry, sal'a-ry, pri'ma-ry, boun'da-ry**, the ă sound (ăsk, so'fă, § 60) is usually preferred; yet in **con'tra-ry** and **li'bra-ry** the ă is the easier to give, and in these and some others of the class is common and allowable. In final syllables, the tendency of the sound is to turn to ĭ (III) in rapid speech, — passing through ĕ on to ĭ (§ 83). this change is common in words like **vil'lăge, sur'făce**, etc, in which the ă is followed by a **j** or an **s** sound. The **ai** in **moun'tain, cap'tain**, etc., as also **ay** in **Mon'day**, etc., takes nearly the ă sound, — falls between this and ĭ (III). For the ă sound in accented syllables, see § 81.

§ 49 (3.) **Â, ă** only in syllables closed by **r** and more or less strongly accented, as in **câre, shâre, com-pâre', pâr'ent, plow'shâre'** The sound is also represented by ĕ (**thĕre**, § 84), and otherwise as in **air, bear, heir, prayer**

The **a** before **r** does not ordinarily take this sound when the **r** precedes a vowel or another **r** in a following syllable of the word, as in **păr'i-ty, păr'ry, com-păr'i-son, chăr'i-ty**, etc. (ă as in ăm); and in **văr'ry, Măr'ry**, etc (ā usually as in **āle**). See an analogous rule for ŏ (**fŏrn**) in § 85, and for ô (**ôrb**) in § 114. But the sound remains without change by an added verb inflection or the suffix **-er**, as in **com-pâr'ing, shâr'er**, and appears exceptionally in **pâr'ent, pâr'ent-age, gâr'ish**, and sometimes indeed in **vâr'y, Mâr'y**; also in **châr'y, wâr'y.**

§ 50. The sound is the narrow correlate of the wide ă (ăm), — see §§ 10, 13 It is not simply a prolongation of that sound, though, if we attempt such prolongation, the organs naturally and unconsciously slide into a position which gives the sound in question; — they may, however, turn to a more open position (§ 15), and thus give out a harsh, flat, nasal sound, which would be quite wrong.

§ 51. Mr. Henry Sweet (*Handbook*, p 28) describes this vowel as low-front-narrow, identifying it with the French père, **f**aire, and distinguishing it from the mid-front-narrow ā (āle). It is, indeed, essentially the same as the so-called "open e" in French (tête, père, etc), German (echt, leben, etc.), Italian (cielo, etc) It was the common sound of the English long **a** two hundred years ago, and still later, and the influence of the **r** would tend to hold it unchanged

The vowel is otherwise described by some authorities, either because of a difference in the actual pronunciation, or of a disagreement as to the analysis of what may really be the same The dictionaries of Walker, Smart, Stormonth, and Ogilvie identify it with ā (āle). Cooley and A. M Bell do the same Mr Bell gives also an alternative pronunciation, as of **e** in **let** prolonged, and the sound is thus described by A. J. Ellis, and by Dr. Murray in the *New English Dictionary* But the ĕ in **lĕt** is the wide of ā (āle), and it is to be remarked of this, as of the ă (ăm), that the attempt to prolong the sound is likely to change the position of the organs, especially as before **r**, and bring it to that of the vowel here in question To pronounce the **e** in **let, end**, as the exact short of ă (**câre**) is a foreign peculiarity, characteristic also of the Irish and the Scotch

Most of the authorities above cited take notice expressly of the vanish, or glide, in ĕ (**ev'ĕr**) through which the vowel passes on to the following **r** — See § 250

§ 52 The error, into which some have been misled, of giving to this ă the sound of ā (āle), with the usual vanish in ĭ (III), is a fault which no orthoepist would sanction When the vowel before **r** is, in some words, — such as **par'ent, ere, e'er, their**, etc, — respelled by ā (āle) as well as ă, it is to be understood that the vanish is in ĕ (**ev'ĕr**) and not in ĭ (III) — See Synopsis, § 277.

§ 53. In syllables under least accent, the ă never occurs in words like **wel'fâre, war'fâre, cor'sair**, etc., the final syllable may be regarded as actually under a secondary accent (§ 34).

§ 54. (4) **Ă, ă** as in **ăm** (emphatic), **ădd, făt, răn'dom, hăve, păr'i-ty**, also in **plaid, guar'an-ty**, etc., the regular "short **a**." It is usually followed by a closing consonant sound, whether accented or unaccented (§ 24) — See § 50

§ 55. Those to whom this peculiarly English sound is not native rarely learn to give it accurately; — see § 23. They use ä (ăsk) in its place. There are English and Americans who do the same; as is always done in the Scottish dialect

§ 56. As UNACCENTED, it is common only in initial closed syllables, as in **ăl-lude', ăt-tack', ăn-nul'**, in cases like **ab'străct** (*a*) there is actually a secondary accent on the final syllable. — See §§ 34, 38, and Fig. 3.

§ 57. (5.) **Ä, ä**. as in **ärm, fär, fäther, äh, älms, pälm**, etc.; having equivalents as in **hearth, aunt, guard**, etc.; commonly called the "Italian **a**." In England, and rarely in America, this sound is given to the **e** before the **r** in **clerk** (§85); and this in **ser'geant** is the leading pronunciation in both countries.

§ 58. This is the narrow variety of the *open-throat vowel*. For more particular description, see §§ 8, 13, 62; see, also, Fig. 1.

§ 59. There is a good deal of latitude of variation in the actual pronunciation of the "Italian **a**" in English, extending all the way between the farthest extremes possible for ä (ärm) and ȧ (ȧsk, 62). A medial form is at present most approved.

§ 60. In unaccented syllables, whenever the mark ä (ärm) is employed, it is to be understood that the vowel is wider — nearer to ȧ (ȧsk) — than when accented; the latter would, in the opinion of some orthoepists, be the proper mark.

§ 61. (6.) **Ȧ, ȧ**. This is the sound to be preferred in certain words or syllables ending in **sk, ff, ft, th, ss, sp, st, nce, nt, nd**; as, **ȧsk, stȧff, grȧft, pȧth, pȧss, grȧsp, lȧst, dȧnce, chȧnt, com-mȧnd'**; and in some other cases; besides its frequent use in unaccented syllables, — for one class of which (§§ 68, 69), it will in this dictionary be indicated by *a*, the italic form of the letter.

§ 62. This vowel is to be clearly distinguished from ă (ăm, hăt, § 54). In organic position it lies between this and ä (ärm), but in quality, as well as position, more nearly resembles the latter. It is the wide correlate of ä (ärm, §§ 8, 13), and is naturally shorter (§ 21). the main part of the tongue is raised higher; the lower jaw is not so much depressed, and the mouth is not so widely opened. hence, ä (ärm) has been commonly and correctly described as broader than ȧ (ȧsk) — See Fig. 1.

This vowel slides easily into ŭ (ŭp, § 16), especially when unaccented; and a slight retraction of the tongue with elevation of the back part will convert the vowel to ŏ (**nŏt**); the reverse transition, as of **nŏt** to **nȧt, Prŏv'i-dence** to **Prȧv'i-dence, bŏd'y** to **bȧd'y**, etc, is a common fault; and also that of **bŭt** to **bȧt** is not altogether uncommon, — see § 25 The two forms, **Mahomet** and **Mohammed**, have come to us through a confusion of the two vowel sounds.

§ 63. Fulton and Knight described the **a** in the class of words in question as "a shortened form of the Italian **a**" A. J Ellis (*Pronunciation for Singers*, pp. 33, 34), speaks of "the fine, thin sound of A', much used by delicate English speakers, especially ladies," for the words in question; a sound which he also recommends in singing — not in speaking — such words as **hand, pat, bad**; and which, he says, is "common now [1877] in Paris" as a sound of the French **a**. The sound is one which many persons have not ear and vocal organs so trained as to appreciate

§ 64 The pronunciation of the **a** in the words in question (§ 61) is, indeed, various and unsettled. It is so represented by Mr Ellis in his *Early English Pronunciation* (pp 1117–48). Also, the *New English Dictionary*, by Dr Murray, marks the vowel in these words with an ambiguous sign, for an optional pronunciation, that may be that of ä (ärm) or of ă (măn, ăm), or be intermediate, as that here indicated by ȧ In the dictionaries of Walker, Smart, Cooley, Stormonth, and Ogilvie, the mark is ă (ăm) Yet, by Smart (*Principles*, 11) and by Cooley, the proper sound is admitted to be intermediate between ă (ăm) and ä (ärm). With the actual diversity in general usage, — in both America and England, — it seems clear that the sound ȧ (ȧsk), the wide of ä (ärm), as the best and most agreeable to the ear, is the one to be preferred.

§ 65 In UNACCENTED SYLLABLES this sound (ȧ) is of frequent occurrence, though in rapid speech more or less obscured and falling sometimes into the neutral form (§ 17)

§ 66 In open syllables unaccented, as in **ȧ-rise', di'ȧ-dem, cȧ-lor'ic, mu'tȧ-ble, bot'ȧ-ny, sal'ȧ-ry, vil'lȧ, so'fȧ, mes-si'ȧh**, etc., this is clearly the proper sound when the syllable is at all prolonged in emphatic or deliberate utterance. See §§ 37, 42.

§ 67. In the dictionaries of Walker, Cooley, Stormonth, and Ogilvie, the mark in all such cases is ă (ăm) Yet probably no one would regard this as the exact sound, if we except those who pronounce the ă (ăm) as foreigners are apt to do (§ 55), that is, with a proper ȧ (ȧsk) sound Walker admits (*Principles*, 92) that, in such cases as **a-bound', di'a-dem, i-de'a, A'fri-ca**, etc., the sound approaches the "Italian **a**" Smart describes this as the Italian **a**, but as coming near to the "natural," or neutral (§ 17) vowel The *Encyclopædic Dictionary* marks it as an obscure sound. The *New English Dictionary*, by Dr Murray, marks it as the "obscure" form of the **a** in **bar** (**arm**, § 57), and the **a** before **r** in **ar-te'ri-al**, etc., as the "ordinary," and not the "long," form of the vowel — See § 39

§ 68 In final or medial syllables, unaccented, and closed by **n, l, nt, nce, nd, s, ss, st, p** or **ph** or **ff, m**, or **d**, as in **syl'van, va'can-cy, mor'tal, loy'al, vn'cant, val'iant, guid'ance, hus'band, bl'as, com'pass, bal'last, break'fast, jal'ap, se'raph, dis'taff, mad'am, myr'i-ad**, etc., the vowel, when prolonged in deliberate or emphatic speech, will quite commonly be sounded as ȧ (§ 61), or nearly enough to be properly so described In accordance with this view, the *New English Dictionary*, by Dr. Murray, gives the same mark — the "obscure" of **a** in **alms, bar** — in the final syllables of **ac'tu-al, ac-quit'tal, a-bun'dant, a-bun'dance**, as in the open syllables above mentioned (§ 66). The dictionaries which give the mark ă (ăm) in open syllables, as above stated (§ 67), use the same also in this case, and with the same inexactness

§ 69 Some authorities note a difference between the two cases of the **a** when the syllable is open (§ 66) and when it is closed by **n, l**, etc. (§ 68) Because of such diversity of opinion, an ITALIC *a* is used, in the spelling for pronunciation in this dictionary, for the latter of these cases, as in **in'*a*nt, fa'*a*l-ly**, etc — See § 42.

§ 70. (7.) **Ą, ą** as in **all, talk, swą'rm, wą'ter, ap-pą'l, bą'lsam**, etc, otherwise represented in **haul, draw, awe**; also in **ôrb, bôrn, bought**, etc. (§ 113), as often if not more commonly pronounced. The digraphs **au** and **aw** are the special representatives of this sound in English, though, in some words, such as **aunt, daunt**, etc., the **au** has passed over to the Italian **a** sound.

§ 71 This is the low-back-narrow-round vowel (§ 11), — made with the place of constriction (§ 6) between the back tongue and the lower border of the soft palate. The lower jaw is depressed, and the opening of the lips is elongated up and down and drawn in from side to side — See Fig 4.

§ 72. There are words, such as **salt, mąlt, quąr'rel** (§ 74), etc., in which the sound falls between **ą** (**all**) and ô (**ôbey**), or in which there is, at least in some cases, an allowable latitude of variation. — See § 115

§ 73. In UNACCENTED SYLLABLES, initial, the sound sometimes occurs, somewhat modified by being less narrow and less rounded, as in **ą-lmight'y, au-thor'i-ty, aus-tere', au-dac'i-ty, ą-lthough'**

§ 74 (8) **Ą, ą** as in **was, what, wąn'der, wąl'low, quąl'i-ty**, etc The sound is identical, or at least nearly so, with that of ŏ (**ŏdd, nŏt**), and **ow** in **knowl'edge**, etc. In the respelling for pronunciation, it will be represented by ŏ. — See §§ 72, 118.

E.

§ 75. The letter **e** has seven variations of sound: ē, ĕ; ę; ĕ; ê; ĕ, accented; and ĕ, the wide variant, unaccented; besides its use as a silent letter and its use with consonant value; and besides the sound of obscure quality indicated by *e* (italic); as see in § 94. For **e** as part of a digraph, see §§ 44, 49, 57, 70, 76, 80, 82, 84, 85, 97, 99, 103, 104, 108, 113, 126, 131, 141, 143.

§ 76. (1.) **Ē**, ē: as in ēve, mēte, **con'crēte'**, **cen'ti-pēde'**, etc.; with the name sound of the letter; and having equivalents as in **feet, beam, de-ceive', peo'ple, key,** Cæ'sar, ma-chine', **field, quay,** Phœ'bus, Por'tu-guese', etc. The vowel is commonly called the "long e."

§ 77. This is the high-front-narrow vowel (§ 10). As actually uttered, especially when preceded by a consonant, it is not usually this absolutely simple element. it commonly starts at a slightly wider degree, somewhat towards **I** (III), and moves to a position the closest possible to a consonant **y**, — in obedience to the diphthongalizing tendency of the language. — See § 127. — It is a fault to end it in an actual **y** sound. — See Fig. 2.

§ 78. (2.) **Ę**, ę: in unaccented syllables, as ę-vent', ę-pit'o-mę, crę-ate', **dę-lin'ę-ate', so-ci'ę-ty**, shorter usually than accented ē (ēve), and somewhat less narrow, verging towards, or sometimes even reaching, the wide **I** (III). See § 37.

§ 79. To give ŭ (ŭp) in place of ę (as **so-ci'ŭ-ty**), or to give the quite narrow form ē (as **so-ci'ē-ty**), is, in either case, offensive to the ear of a correct speaker.

§ 80. (3.) **Ę**, ę. This, in genuine English words, occurs only with **i** or **y** added, so as to make a digraph; as in **ęight, pręy, vęin**, etc. The sound is identical with ā (āle, § 44), and will be indicated by ā in the respelling.

§ 81. In naturalized and half-naturalized foreign words, as **forte, finale, abbé, ballet, consommé, adobe, auto-da-fé, José**, and in the interjection **eh** and in a few other instances, we have this sound of **e** accented, but without the vanish (§ 45) in **I** (III). In such cases, it may, in the respelling, be well enough indicated by the symbol ā (§ 48).

§ 82. (4.) **Ĕ**, ĕ as in **ĕnd, pĕt, tĕn, ĕr'ror**, etc.; otherwise as in **feath'er, heif'er, leop'ard, friend**, di-ær'e-sis, as'a-fœt'i-da, **bur'y, guess, a'ny, said**, etc., the so-called "short e;" — mid-front-wide, correlative of the narrow ę (**ęight**), ā (āle); — see §§ 45, 47. The syllable is usually closed by a consonant sound.

§ 83. Unaccented it occurs, as in ĕx-cuse', ĕn-large', ĕf-face', ĕs-tate', **ĕr-ro'ne-ous, lev'ĕl, in'tĕl-lect', car'pĕt**; and sometimes it verges to or towards **I**, as in **ro'sĕs, hors'ĕs, fair'ĕst, wis'ĕst, riv'ĕt, end'ĕd, wick'ĕd, wool'ĕn, kitch'ĕn, ĕn-cour'age**; — see § 38. The pronunciation of **hors'es, chick'en, wit'ness**, as hors'ŭz, chick'ŭn, wit'nŭs, — ŭ (ŭp) for ĕ, — is not approved.

§ 84. (5.) **Ê**, ê as in **thêre, whêre**; also in **heir**, etc, only before **r**, — identical in sound with ā (**cāre**, § 49), — heard also as unaccented in **whêreby', whêre-in'**, etc.

§ 85. (6.) **Ĕ**, ĕ as in **fĕrn, ĕrr, hĕr, ĕr'mine, vĕrge, in-fĕr', per-vĕrt'**; — otherwise as in **sir, bird, earn, mirth, mȳr'tle, guer'don**, etc. It occurs before **r** and in accented syllables; but not when the **r** precedes a vowel or another **r** in the following syllable of the same word, as in **vĕr'y, pĕr'il, mĕr'ry, ĕr'ror, hē'ro, pē'ri-od**, etc., except that verbs having this sound of the letter almost always retain it when inflected or suffixed, as in **con-fĕr'ring, de-tĕr'ring, con-fĕr'rer, re-fĕr'ri-ble**, etc.; — compare § 49. In England, the word **clerk** is still commonly pronounced with the **i** (ûrm) sound (§ 57), as **Berkeley** and **Derby** were till of late. And, in New England, an **i** (ûr,m) or **a** (cârm) sound was once usual in such words as **serve, earth, earn, term**, etc. For **ser'geant**, see § 57.

§ 86. This is the mid-front-mixed-narrow vowel (§ 16), — distinguished as front from the back **u** (ûrn), and as narrow from the wide unaccented ĕ (**ev'ĕr**, § 90)

§ 87. The distinction of sounds here noted, as between ĕ (**fĕrn**) and **u** (ûrn) is quite clear; and the majority of orthoepists at the present time are in favor of observing it. It is at the same time true that, by the majority of English-speaking people, it is not actually observed. But those who employ only one of these two sounds do not all use the same one: there are some who habitually pronounce both **fern**, or **sir**, and **urn, burn**, with the distinctive ĕ (**fĕrn**) sound, while others give to **fern** and **sir** the proper **u** (ûrn) sound. The unsettled usage makes such diversity allowable · — see § 3. One desiring to find out whether there is for him any distinction of the kind may do so by trying whether he can conceive of a sound admissible in **urn, turn, hurl, tur'bid**, and yet objectionable in **earn, term, girl, in-terred'**.

§ 88. By Walker, the **e** in this case is marked ŭ, as in **bĕd, ĕnd**, etc.; and the **i** is marked in some words ĕ, and in others **u** (ŭp). Yet he says: "This sound [of **e**] before **r** is apt to slide into short *u*, and we sometimes hear *mercy* sounded as if written *murcy*; but this, though very near, is not the exact sound" Smart speaks of **er** and **ir**, when distinguished from **ur**, as "delicacies of pronunciation that prevail only in the more refined classes of society;" describing the sound as one that lies between ā (āle) and ŭ (ŭp). The *New English Dictionary*, by Dr. Murray, employs two different symbols, one for the sound in **fern, fir**, etc., and another for that in **urn, fur**, etc., the vowels being, he says, "discriminated by the majority of orthoepists, though commonly identified by the natives of the south of England" The dictionaries of Stormonth and of Ogilvie distinguish between the **e** in **her** and the **u** in **bud**; but they assign the former sound to nearly every case in which we have the spelling **ur**, as in **burn, hurl, oc-cur'**, etc., giving the sound as in **bud** to **u** before **r** doubled, as in **cur'rent, tur'ret, hur'ry, oc-cur'rence**.

§ 89. The ĕ (**fĕrn**) — the sound as here intended to be understood — is quite near to the French **eu**, as in **jeu, jeune, leur, amateur**, etc., and to the German ö, **oe**, as in **schön, Goethe**, etc.; the difference being that the French and German words take more of a labial modification. — See §§ 16, 86.

§ 90. (7.) Unaccented ĕ (before **r**), — as in **ev'ĕr, read'ĕr, lov'ĕr, sev'ĕr, sev'ĕr-al, pĕr-form', rev'ĕr-ent, in'fĕr-ence, in'tĕr-view, cav'ĕrn**, etc., with equivalents in e-lix'ir, zeph'ȳr, ac'tŏr, etc., — is the wide variant of the accented ĕ (**fĕrn**, §§ 85, 14, 16 *b*). Its quality as such is plain in deliberate utterance, though somewhat obscured in rapid speech. The closing element of the **eu** in **grandeur** has this sound, and that of the **u** in **nature, pleasure**, etc., takes it or inclines to it; — see §§ 19 *b*, 135. Closely related to this is the sound explained below (§§ 91-94); as also the voice-glide (§ 95). — See §§ 105, 124, 135, 145.

§ 91. The **e** before **n** in unaccented syllables, — as in **pru'dent, sev'en-ty, rai'ment, con-ven'ient, cre'dence, de'cen-cy**, etc., — takes a sound of obscure quality in rapid speech. In the case here presented, — of the **n** followed by another consonant, — the question arises whether the sound, when prolonged, becomes the same as does that of **e** before **r**; — see § 42. In such words as **dif'fer-ence, in'fer-ence, rev'er-ent**, there is a plain similarity between the vowel of the middle and that of the final syllable, if the words are pronounced as they usually and naturally are by the majority of well-educated people. The **n** may make the **e** a little higher than it is before **r**, but should not change it to ĕ (ĕnd); — though, indeed, this form is inculcated by some orthoepists. The **e** before **n** in **wool'en, kitch'en**, etc., takes properly the ĕ (ĕnd) sound, which in rapid speech tends toward **I** (III), — see § 83. To allow a sound like ĕ (ĕnd) in **de'cent, pen'i-tent, sev'en-ty**, etc., would bring in a tendency in these cases to let the sound fall to **I** (III), which certainly should be avoided. Another fault, not less to be avoided, is that of suppressing the **e** in **pru'dent, de'cent**, etc., giving only the voice-glide (§ 95), as if to be pronounced pry'd'nt, etc. In words like **com'ment, con'vent**, — correct with ĕ (ĕnd), not ĕ (**ev'ĕr**), — we have the final syllable actually under a secondary accent.

§ 92. Before **l**, the unaccented **e** is, in some cases, like that above before **n**; as in **nov'el, in'fi-del**, while in **shriv'el** and some others it takes the form explained below (§ 95), — but, in many cases, it is commonly and properly given as ĕ (ĕnd); thus in **jew'ĕl, cru'ĕl, cam'ĕl, gos'pĕl, fun'nĕl, an'gĕl, cham'nĕl** In some of these, and in other words of the kind, there is considerable diversity of usage as between these sounds.

§ 93 Authorities differ as to the true character of the obscure unaccented sound of **e** before **n, l, r** (§§ 90-92), or hesitate to decide upon it. Mr Ellis (*Early English Pronunciation*, pp. 1161-1163, and *Pronunciation for Singers*, p. 139), prefers most decidedly his equivalent for ĕ (**fĕrn**) obscured, rather than ĕ (ĕnd), in **in'no-cent, pru'dence**, etc, — the same which he gives for the **e** before **r**, as in **read'er, rob'ber, ev'er**, etc. The *New English Dictionary*, by Dr. Murray, gives the **e** in **mo'ment, sev'er-al** (-er-), as the "obscure" form of **e** in **yet, ten**; and marks the **e** in **en-tail'**, and also the **e** in **add'ed**, as the "obscure" form of the vowel that is "long" in **fern, fir, earth**, and "ordinary" in **ev'er** (-er) and in **na'tion** (-on). Mr. Ellis assigns a quite different sound to the **e** in **add'ed**, namely, that of ĕ (ĕnd), or ĕ falling into **I** (III) These authorities are thus at variance.

§ 94. In the case of words like **pru'dent, nov'el**, etc. (§§ 91, 92), because of the difference of opinion as to what the clear sound of the **e** before **n** or **l** should be when prolonged (§ 42), and to avoid misleading such as might not clearly apprehend the sound if ĕ were employed, the vowel will be indicated by a bare Italic *e* in the spelling for pronunciation

§ 95. The unaccented vowel of obscure quality before **n** or **l**, as above (§§ 91-94), is sometimes reduced to the attenuated form called the *voice-glide* (§ 17); expressed not only by an **e**, but by an **i** or an **o** vowel letter, — **e** being most frequently written after **l**, — as in **eat'en, heav'en, o'pen, shriv'el, a'ble, gen'tle, par'ti-cle, ba'sin, cous'in, par'don, sea'son**, etc. In some cases, the articulative position for the **n** or **l** is so nearly the same as it is for the preceding consonant that no sound need come between, and the **n** or **l** may serve in place of a vowel for the formation of a separate syllable; as in **eat'en, gold'en, swol'len, can'dle, cat'tle**, etc. But, even in these cases, it is allowable to break the contact of the organs for an instant, and interpose the voice-glide. When the articulative positions are quite different, the voice-glide naturally intervenes in making a separate syllable with the **l** or **n** Thus a sound comes between **b** and **l** in **a'ble**, as not in **a'bler, a'blest, bless, blow**, and between **p** and **l** in **ap'ple**, as not in **ap-ply'**; and between **k** and **l** in **tac'kle**, as not between the same sounds in **cloud, ac-claim'**, etc., and in **ev'en** a sound comes between **v** and **n**, as not in **eve'ning**.

Syllables are also made by **m** with the voice-glide, which in that case is more nearly allied to ŭ (ŭp) than to ĕ (**ev'ĕr**), as in **schism** (sĭz'm), **chasm** (kăz'm), **mi'cro-cosm** (-kŏz'm), etc.

Syllables thus made with **n, l**, or **m**, may be closed by an added consonant, as in **strength'ened, hap'pened, chasms, rea'sons, rea'soned, pol'soned, set'tled, en-foe'bled**

The voice-glide (§ 17) differs from other cases of the neutral vowel by its extreme brevity only — ordinarily the extremest possible; — and, when followed by **n** or **l**, is more nearly related to ĕ (**ev'ĕr**) than to any other clear vowel sound. In slowly repeating the line "Was not spoken of the soul," there are different forms supposable for "spoken" We may dwell on the closing consonant only; but it will sound better to dwell briefly also on the voice-glide; and, for the clear vowel to be thus approached (§ 42), ĕ (**ev'ĕr**) is far preferable to ŭ (ŭp), while ĕ (ĕnd) is least of all to be allowed.

In this Dictionary, an Apostrophe (') is used in the respelling for pronunciation to indicate the vowel elision or the voice-glide; as, par'd'n, a'b'l, etc.

§ 96. (8) The letter **e** *silent*. As annexed to a consonant at the end of a syllable, this letter has no sound of its own, but serves, in accented syllables, to indicate the preceding vowel as long, as in **cāme, tōne**; and may be regarded as forming with that vowel a sort of digraph. But in some instances the preceding vowel has become short, as in **give, hāve, bāde, dōne, hyp'o-crite**, etc.; is short also in **ol'ive, prom'ise, ex-am'ine**, etc. It also marks the preceding consonant **c** or **g** as soft; as in **ser'vice, rav'age, vice, o-blige'**. In the endings **-ed, -en**, of past tense and participle of verbs, the **e**, except in the solemn style, is for the most part elided, — unless the verb stem ends in **d** or **t**, as in **add'ed, o-mit'ted**, thus requiring the **-ed** to be fully pronounced.

§ 97. The letter **e**, *with consonant value*. Like the short **I** (§ 106), when **e** unaccented is closely followed by another vowel, it naturally takes on, or falls into, more or less of a consonant **y** sound, and the **e** thus makes, or may make, with the following vowel an impure, or semi-consonantal, diphthong (§ 19 *b*). In Shakespeare and Milton the words **hideous** and **lineal** make but two syllables; and **lineament**, three. The pronunciation as above described is upheld by Cooley, Smart (*Principles*, 146-7), and Walker. After **t**, or **d**, or **ç**, or **s**, this **y** sound often coalesces with the consonant and changes its sound; as in **right'eous** (rī'chŭs; by some pronounced rīt'yŭs, rī'chē-ŭs, etc., § 277), **gran'deur** (grăn'dŭr; by some, grănd'yēr;

by others, grĕn'jĕr; § 135), **mi-ca'ceous** (-shŭs), **o'cean** (ō'shan), and **nau'seous** (nȧ'shŭs). Even after the sound of the **e** has changed the preceding consonant, it may still appear, especially when the accent falls upon the following vowel; as in **o'ce-an'ic** (ō'shē-ăn'ĭk), **nau'se-a'tion** (nȧ'shē-ā'shŭn), etc. Orthoépists are now more generally in favor of not allowing the vowel to take consonant value at all in **cu-ta'ne-ous** (-nē-ŭs), **hid'e-ous** (-ē-ŭs), **lin'e-al** (-ē-al), **mal'le-a-ble** (-lē-ȧ-b'l), and the like. See §§ 106, 134, 135, 277 (Synopsis).

I.

§ 98. This letter has five variations of sound: **ī**; **ĭ**; **ĭ**, **ī**; **ĭ**; besides its use with consonant value; and besides its significance as a voice-glide (§ 95).

For **i** as part of a digraph or trigraph, or of a diphthong, see §§ 44, 48, 49, 54, 76, 82, 84, 90, 99, 103, 104, 106, 126, 129, 131, 141.

§ 99. (1.) **ī**, **ī**: as in **ice, time, sight, child, blind, gī'ant, might'y, jus'-tī-fī'a-ble**, with the name sound of the letter. It is commonly called "long **i**." Equivalents are **vie, guile. height, aisle, thy, buy, choir, rye, eye, ay** or **aye** (yes) as sometimes heard.

§ 100. The sound is diphthongal. The main part is the glide between the initial element and the terminal **ĭ** (**ĭll**); — see § 19. The initial varies in different localities and as spoken by different persons, ranging all the way from **ä** (**ärm**) to **ĕ** (**ĕnd**) It varies also somewhat as affected by the preceding consonant. It falls more commonly between **ȧ** (**ȧsk**) and **ŭ** (**ŭp**).

§ 101. (2.) **ī̆**, **ī**: unaccented; as in **i-de'a, bī-ol'o-gy, trī-bu'nal, bī-car'bonate, dī-am'e-ter.** The quality of the sound is subject to variation, the diphthong being more curtailed as the syllable takes less stress and shorter quantity. In words like **em'pire, con'trīte, con'fines** (*n.*), there is actually a secondary accent upon the final syllable, as implied in the full diphthong of the long **ĭ** (**ice**).

§ 102. (3.) **ĭ̈**, **ĭ·** as in **pīque, ma-chine', in-trigue'**, etc., — words from other languages, with the foreign and original sound of the letter retained The sound is the same as that of **ē** (**ēve**, § 76), by which it is represented in the respelling for pronunciation.

§ 103. (4.) **ĭ̆**, **ĭ**. as in **ill, pit, pĭt'y, is'sue, ad-mĭt', un-tĭl'**, etc Equivalents are **hȳmn, guin'ea, sieve, breech'es, been, Eng'lish**, others, as solitary instances, are **bus'y, wom'en.** It is the high-front-wide vowel, corresponding to the high-front-narrow **ē** (**ēve**), **ĭ** (**pīque**); and is the so-called "short **i**," — see §§ 10, 22, 24. Those to whom the English is not native rarely learn to give the proper wide sound of this vowel, but follow their own vernacular in a form between **ĭ** (**pit**) and **ī** (**pique**), — see §§ 15, 23

§ 104. Unaccented syllables with this vowel are, in the greater number of cases, closed by a consonant, as in **cab'in, il-lume', in-hab'it** When silent **e** is annexed to the consonant, the vowel sometimes has the sound of **ĭ** (**ill**), and sometimes of **ī** (**idea**, § 101), or of **ĭ** (**ice**). as, **doc'ile, gen'tile; mar'i-time, pan'to-mime, of'fice, sac'ri-fice; fran'chise, en'ter-prise, er'mine, ex-am'ine, fe'line, car'bine, gran'ite, con'trite.** Open unaccented syllables also are made with this vowel, but with the sound modified to a slightly less wide form, as in **pac'ĭ-fy, dĭ-vide', fĭ-nance', o'rĭ-ent**, etc.; — see § 38 An improper pronunciation like paç'ŭ-fy, dŭ-vide', fŭ-nance', etc, is sometimes heard But an obscure sound between **ĭ** (**ill**) and **ŭ** (**ŭp**) — really the neutral-vowel sound — is quite commonly given in **pac'i-fy, di-vide', vis'i-ble, hor'ri-ble, capac'i-ty, e-ter'ni-ty, vis'i-bil'i-ty**, etc.

As regards the pronunciation of the **i** of the endings **-ine, -ide**, in the terminology of chemistry, the usage is unsettled as between **ĭ** (**ice**) and **ĭ** (**ill**) and **ī** (**pique**) But the Chemical Section of the American Association for the Advancement of Science in 1889 passed a vote in favor of the **ĭ** (**ill**), and then, further, voted to drop the final **e** in the spelling, as, **bro'mĭn, chlo'rĭn, i'o-dĭn, i'o-dĭd, chlo'rĭd, bro'mĭd**, etc., — the spelling offered by Dr Webster in 1828.

The sound **ĭ** (**ill**), unaccented, is represented by **ei** in **for'eign, sur'feit, for'feit-ure, coun'ter-feit**, etc, by **ui** in **cir'cuit**, etc., by **ie** in **mis'chief**, etc.; by **ia** in **par'lia-ment, car'riage**, etc.; by **oi** in **tor'toise**, etc, and is commonly heard in the final syllables of **sur'face, vil'lage**, etc, and of **cap'tain**, etc., and of **end'ed, wick'ed**, etc.

§ 105. (5.) **ĭ̈**, **ĭ**, before **r**, as in **flr, blrd, vĭr'tue, vĭr'gin, lrk'some**, etc., is the precise equivalent of **ĕ** (**fĕrn**, § 85) The wide variant of the same, the equivalent of **ĕ** (**ev'ĕr**), occurs in unaccented syllables in a few instances, as in **ta'pĭr, na'dĭr, e-lix'ĭr.** Both will be represented by **ĕ** in the respelling for pronunciation But in some words the sound, before **l** or **n**, is reduced to the voice-glide, as in **e'vil** (**e'v'l**), **ba'sin** (**ba's'n**), etc., — see § 95.

§ 106. (6.) The letter **i**, *with consonant value.* A short **i**, closely followed by another vowel, often and naturally falls into a **y** sound, and thus produces an impure diphthong (§ 19 *b*), and makes one syllable out of two, as in **fĭl'ial, mĭn'ion, gen'ius**, etc. A preceding **s** surd, **c** soft, or **sc**, by fusion with the **y**, takes an **sh** sound; and an **s** sonant or a **z** takes a **zh** sound, — as in **man'sion, con'scious, vi'cious, vi'sion, gla'zier**, — the **i** sound being wholly lost A preceding **t** does the same, — having first taken an **s** sound, after the fashion of the French, and originally in words from that language, — as in **na'tion, par'tial**, etc ; with the exception, also in accord with the French usage, that, when preceded by a syllable ending in **s** or **x**, the **ti** takes a **ch** (**tsh**) sound, as in **ques'tion, mix'tion, Chris'tian**, etc. After **g**, the **i** falls out, leaving the **g** soft, as in **re'gion.** When **d** precedes the **i**, the **di** in some words becomes, or tends to become, a **j** (**dzh**); as **cor'dial, In'dian**, etc., are sometimes, and **sol'dier** is always, pronounced. When accent, primary or actual secondary, falls on the following vowel (as in **ex-pa'ti-ate, par'ti-al'ĭ-ty, cor'di-al'ĭ-ty, as-so'ci-a'tion, fa-mil'i-ar'i-ty, Chris-tian'i-ty**), there is a diversity of usage, some not sounding the **i** as a vowel at all; as **ĕks-pā'shāt, pär-shăl'ĭ-tȳ, kôr-dĭ'ăl-tȳ** *or* **kôrd-yăl'-, ăs'sō-shā'shŭn** [as some pronounce], **fā-mĭl'yăr'ĭ-tȳ, krĭs-chăn'ĭ-tȳ**; others bringing it in after the changed consonant, or after the **y** sound; as **ĕks-pā'shĭ-āt, pär'shĭ-ăl'ĭ-tȳ, ăs-sō'shĭ-ā'shŭn, kôr'jĭ-ăl'ĭ-tȳ** *or* **kôrd'yĭ-ăl'-, fā-mĭl'yĭ-ăr'ĭ-tȳ** [so some]; and others retaining the **i** unchanged and without consonantal effect except the conversion of a preceding **t** into an **sh** or a **ch** sound; as in **ăs-sō'shĭ-ā'shŭn, kôr'dĭ-ăl'ĭ-tȳ, fā-mĭl'ĭ-ăr'ĭ-tȳ, pär'shĭ-ăl'ĭ-tȳ, krĭs'chĭ-ăn'ĭ-tȳ**; and this may be regarded as in most cases the leading manner of pronouncing such words. — See § 97, and Synopsis, § 277.

O.

§ 107. This letter has seven sounds: **ō, ŏ, ô, ŏ, o̤, o̤, ȯ**; besides representing merely the voice-glide (§ 95), and besides the exceptional sound in **wom'en** (§ 103). For **o** as part of a digraph, see §§ 44, 70, 74, 76, 82, 97, 99, 106, 108, 113, 118, 126, 128, 129, 131.

§ 108. (1.) **ŏ̄, ō** as in **ōld, nōte, bōne, ō'ver, pro-pōse', lō'co-mō'tive**, etc ; with equivalents as in **roam, foe, shoul'der, grow, owe, sew, yeo'man, beau, haut'boy, door**: with the "regular long" sound (§ 22), and the name sound of the letter.

§ 109. This vowel takes, as a peculiarity of the English language, a distinctly perceptible vanish in **o͝o** (**fo͝ot**), or sometimes in **o͞o** (**fo͞od**), and is thus diphthongal (§ 19). The radical part is the mid-back-narrrow-round vowel (§ 11). The lips are contracted to a circular opening, and the jaw is less depressed than for **o̤** (**o̤ll**, § 71), and more than for **o͝o** (**fo͝od**) As in the similar case of **ā** (**āle**), the vanish is not universal, yielding more or less to counteracting influences. Yet it often exists when unrecognized and unacknowledged In the Scottish dialect it is not heard The vowel is otherwise subject to some variation in its quality, as in different words, or as spoken by different people

§ 110 There has prevailed in New England a pronunciation of **o** in certain words, — **home, whole, coat, stone, only**, and many others, — which does not give the vanish, and takes a wider form than **ō** (**ōld**), and the same as **ŏ** (**ŏ-bey'**) brought under the accent This local usage, now gradually becoming antiquated, is not indicated for any of these words in this Dictionary, except by reference to this paragraph, though, by some eminent authorities, Professor Whitney in particular (*Oriental and Linguistic Studies*, ii, 216), its retention and general adoption is advocated as desirable The symbol **ŏ** (§ 112) would serve to indicate this pronunciation with sufficient exactness

Mr A J Ellis remarks (*Early English Pronunciation*, p. 57) "The vowel (*oo*)" — described by him as the long of "English *omit*, American *stone, whole*" — "does not occur as a short vowel in recognized English, but *hole, whole* are not unfrequently distinguished as (*Hool, Hol*)" — the long and the short of the same vowel.

§ 111 Before **r** in accented syllables, the long **o** naturally and more properly takes a vanish in **ûr** (**ûrn**), instead of **o͞o** (§ 109), as in **glō'ry, ōre, dōor, fōur, flōor** This has led to a change, that has prevailed in England to an increasing extent of late years, and so as there to have become the rule, — replacing the regular long sound by one akin to that in **ôrb, lôrd, ôr'der**, etc (113); so that **mourn'ing** will rhyme fairly well with **morn'ing, pork** with **fork**, and **o'ral** is not clearly distinguished from **au'ral** This sound of **o** has a separate mark in the *New English Dictionary* by Dr Murray, and in Hunter's *Encyclopædic Dictionary*. No such peculiarity was noticed by Walker, and it must have arisen since his time. It is recognized in the present work only by an occasional reference to this paragraph.

§ 112 (2.) **ŏ̄, ŏ** In unaccented and usually open syllables, in English; as in **ŏ-bey', tŏ-bac'cō, bil'lō̆w, bil'lō̆ws, sŏ-crat'ic, pō-et'ic, eu'lō-gy, a-nat'ŏ-my, trans'ĭ-tō-ry.** It differs from the **ō** (**ōld**), not only by absence of the vanish, but by taking a wider form, which varies, inversely, according to degree of stress and prolongation The symbol will serve well for the more common **o**, accented as well as unaccented, in most other languages See § 110

§ 113. (3.) **ô̄, ô** only before **r**, as in **ôrb, lôrd, ôr'der, ab-hôr', ex-hôrt'**, etc , with equivalents, as in **extraordinary, georgic**, etc.

The most generally approved pronunciation here represented by this symbol is essentially identical with that of **ȧ** (**ȧll**, § 70), but deviations from this are so frequent, either on the one side toward **ō** (**ōld**) or on the other toward **ŏ** (**ŏdd**), as to render the symbol somewhat indeterminate as an indication of the actual usage. The *Imperial Dictionary* of Ogilvie marks the letter as **ŏ** (**ŏdd**) in all cases of the kind, and Stormonth's Dictionary does so in nearly all See § 115

§ 114 The **ô** is limited to accented syllables with the **r** not followed by a vowel or another **r** in the same word, the case of inflected verbs (as **ab-hôr'ring**) and the cognate nouns in **er** (as **ab-hôr'rer**) excepted, while otherwise the vowel is **ŏ**, as in **fôr'eign, ôr'ange, tôr'rid**, or **ō**, as in **mōre, ō'ral, stō'ry.** Compare §§ 49, 85. But in many cases which come under this limitation, the **o** before **r** takes a different sound; as in **fōrd, af fōrd', pōrt, pōr'ter, im-pōrt'**, etc.

§ 115. There are some words in which **o** before consonants other than **r** takes usually and properly a medial sound, as between **ȧ** (**ȧll**) and **ō** (**ōld**), **ŏ** (**ŏbey**), or **ŏ** (**ŏdd**), as **song, long, soft, dog, cross, gone, off, trough, oft, of'ten, cost, broth, cloth, god**, etc. The range in this case — and also in the preceding (§ 113) — is rather between **ȧ** (**ȧll**) and **ŏ** (**ŏ-bey'**, § 112), or **ō** (**ōld**, § 108) without the vanish, than between **ȧ** (**all**) and **ŏ** (**ŏdd**, § 118) Which of these places it is into which the pronunciation actually falls can in any instance be ascertained by observing the degree of the lip rounding. if this be greater, *i. e.*, closer, than for **ȧ** (**ȧll**), the variation is towards **ŏ** (**ŏ-bey'**) or **ō** (**ōld**), if not so great, it is towards **ŏ** (**ŏdd**) In the respelling for pronunciation in the Dictionary, this medial sound is usually indicated by **ŏ** (**ŏdd**), together with a reference to this paragraph

§ 116 In unaccented syllables, we sometimes have the **ô** (**ôrb**); as in **môr-tal'i-ty, fôr-get', ôr-dain'**, etc, and in **fôr, nôr, ôr**, unaccented as well as accented; but in such case hardly needing to be distinguished from **ŏ** (**nŏt**).

§ 117. The organic position for **a** (**ȧll**) lies between that for **ä** (**ärm**) and that for **ō** (**ōld**). The sound is developed, historically, sometimes from one side and sometimes from the other. Hence it is that, in the normal spelling, we have the **ȧ** (**ȧll**) sound represented both by **a** and by **o**.

§ 118. (4.) **ŏ, ŏ**: as in **nŏt, ŏdd**, etc.; the so-called "short **o**;" having **ȧ** (in **was**, etc.) as an equivalent, and also **ow** in **knowl'edge** and **ou** in **hough, lough.** This is the low-back-wide-round vowel, — so placed, that is, in our scheme, though, in fact, as ordinarily spoken, it is not precisely the wide form of the narrow **ȧ** (**ȧll**, § 70), but of a sound that would fall between this and **ō** (**ōld**, § 108), — *see* § 115. That is to say, the **ŏ** is higher in position than would be the exact wide form of **ȧ** (**ȧll**) The lips are much less contracted than for **o̤** (**o̤ll**), but more than they would be for the exact wide of that vowel.

§ 119. For a certain faulty pronunciation of this vowel, changing it to ȧ (ȧsk), see § 62.

§ 120. UNACCENTED SYLLABLES with ŏ are naturally closed by a consonant; as in **ŏb-lŏnde'**, **ŏc-cur'**, **ŏp-press'**, **dis'cŏn-tent'**, **rec'ŏl-lect'**, **re'cŏm-mit'**; falling into the neutral sound in very rapid speech. They are rarely final syllables, the ŏ (sŏn) sound (§ 124) being commonly given in final syllables. — See § 39.

§ 121. (5.) Ọ, ọ: as in **dọ, prọve, tọmb**, etc.; with sound the same as o͝o (§ 126); and represented by o͝o in the respelling for pronunciation.

§ 122. (6.) Ọ, ọ as in **wọlf, wọ'man, bọ'som**, etc.; with sound the same as o͝o (§ 128), and represented by o͝o in the respelling for pronunciation.

§ 123. (7.) Ô, ô: as in **sôn, dône, ôth'er, wôrm**, etc.; doubled in **flood**, blood, etc.; — with sound the same as ŭ (ŭp, § 141), or before **r** as û (ûrn, § 139), and, in the respelling for pronunciation, represented by these symbols in accented syllables.

§ 124. In UNACCENTED SYLLABLES the ô occurs frequently; as in **ac'tôr, at'ôm, wel'cône, fel'ôn, bish'ôp, big'ôt**, etc., with sound either as ŭ (ŭp) or as ĕ (evĕr), or between the two, mainly as influenced by the succeeding and somewhat by the preceding consonant. In the respelling for pronunciation, it will appear before **r** as ĕ (§ 90), and in most other cases as ŭ (§ 142); but sometimes before **n** it represents merely a voice-glide; as **beck'on** (bĕk''n), **rea'son** (rē'z'n). — See §§ 39, 95.

Oo.

§ 125. The double letter **oo** has two sounds, marked o͝o and o͞o, besides the **oo** in **door**, and in **flood**, etc. (§§ 108, 123).

§ 126. (1.) o͞o, o͞o: as in **mo͞on, fo͞od, fo͞ol, bo͞ot**, etc.; with equivalents in **do, canoe, group, rude, rue, recruit, rheum, drew**, manœuvre; the double letter **oo** is the special representative of the sound in English.

§ 127. The sound is that of the high-back-narrow-round vowel (§ 11), and is made with the labial opening still more contracted than for o͝o (o͝od, § 108). As ordinarily spoken, especially when joined to a preceding consonant, it is not this absolutely simple element, but begins with a very brief sound of o͝o, or one intermediate, gliding quickly from this to the narrow position on which it dwells and rests, and which brings it near to a consonant **w** sound, — compare § 77. — See Fig. 4.

§ 128. (2.) o͝o, o͝o as in **fo͝ot, wo͝ol, go͝od, cro͝ok'ed**, etc. Equivalents are ọ (**wọlf**) and ụ (**fụll**). It is the wide correspondent of the narrow o͞o (§ 126). Orthoëpists do not always agree as to what words shall be marked o͝o and what o͞o. Thus, in Stormonth's, the *Encyclopædic*, and Smart's Dictionaries we have **ho͝ok, so͝ot**, and in the *Imperial Dictionary* of Ogilvie, **ho͞ok, so͞ot**; and Walker limits the "shorter" sound of **oo** to the eight words, **wool, wood, good, hood, foot, stood, understood, withstood** There are local diversities as between these sounds. The o͝o sound is heard in England before **r**, instead of the o͞o (**fo͞od**) common in America; as in **poor, sure**, etc. — See Fig 5.

Ou, Ow, and Oi, Oy.

§ 129. For the analysis of these two diphthongs, see § 19. Examples are **out, owl**, etc., and **oil, boy**, etc. The **ou** is often mispronounced by giving the initial as ă (ăm) instead of ȧ (ȧsk). UNACCENTED, or only secondarily accented, we have **ou** in **out-ra'geous, out-live', out-run'**, etc.

As digraphs, these combinations of letters take several other sounds; as in **soup, route, Zouave** (zwäv *or* zo͞o-äv'), **soul, cou'ple, griev'ous, know, billow, knowl'edge, cham'ois, av'oir-du-pois', choir, tor'toise**, etc.

U.

§ 130. This letter has six variations of sound, viz. · ū; û; ụ; u͝o, ŭ; — besides its use as a silent letter and its use with consonant value, — and besides the exceptional sound, like **I** (**ill**), in **bus'y, let'tuce, fer'ule.**

For **u** as part of a digraph, or trigraph, or diphthong, see §§ 44, 54, 57, 70, 76, 82, 58, 99, 103, 108, 118, 126, 129, 131, 139, 141-144.

§ 131. (1.) ū, ū· as in **ūse, a-būse', fū'sion, pūre, mūte, cūbe, tūne, dū'ty, lūte, jū'ry, hū'man, nū'mer-ous**, etc, the so-called "long **u**;" having equivalents as in **beauty, feodal, feud, pew, ewe, lieu, view, cue, suit, yule, yew, you.**

§ 132. The general type of the sound is that of a diphthong, which has o͞o (**fo͞od**) for the terminal and main part, and for the initial a very brief and evanescent element, which is the high-mixed vowel (§ 16) nearly related to **I** (**ill**) or to ē (ēve); and in the greater number of cases there comes in, as a connecting glide, a more or less full sound of consonant **y**, which in many cases encroaches upon, and either almost or even quite displaces, the initial vowel element. When preceded by certain consonants, the **y** glide has a tendency to be fused with the consonant, thus taking the shape of a sibilant, **sh** or **zh**, glide, — the whole process issuing in what is called the *palatalisation* of the consonant. This tendency, in accented syllables, — to which the ū is limited, — should be severely restricted. Also, in no case whatever should the **y** sound be forced in when it will not come in smoothly as a glide. See §§ 134, 135.

§ 133. There is a lip-rounding, not only on the final element o͞o, but in some degree on the initial element, becoming gradually closer all the way through. The brief initial element bears a close resemblance to the French **u** and the German **ü**: if we begin with a French **u** and end with o͞o (**fo͞od**), taking also the intervening **y** glide, we have the exact vowel in the word **view**. This labialization of the entire diphthong is a point of importance to be kept in mind. It comes, indeed, naturally with **b, p, m, v**; as in **beau'ty, pūre, mūte, view.**

§ 134. At the beginning of a syllable, as in **ūse, ū'nit**, etc., the (labialized) initial vowel element is nearly displaced by the (likewise labialized) **y** glide, — the ū here sounding the same as **you** in the words **you, youth**, etc. Next to this, the **y** sound comes in the most clearly after **p, b, m, v, f, c**, and **g** hard; as in **pūre, bū'reau, beau'ty, mūte, view, fū'tile, cūbe, gūle.** After **n**, it is less prominent; as in **new, nū'mer-ous.** After **s, l, j, th**, the **y** sound comes in with difficulty, and need not be attempted; as in **sūit, as-sūme', lūte, jū'ry, thew, en-thū'si-asm**; and after **t** or **d**, the ū may better be given without the **y**; as in **tūne, tū'tor, due, dūke, dū'ty.** In all these cases of **y** omitted, the initial vowel element is retained: it would be quite wrong to give an ordinary o͞o (**fo͞od**) for the entire sound in such words. The **y**, if attempted after **t** or **d**, is apt to degenerate into a sibilant, and produce, with the consonant, a decided **tsh** or **dzh** sound, thus making **due** the same as **Jew.** It is better not to allow more prominence to the sibilant sound after **t** or **d** than the slight degree that goes with **p**, as in **pūre, c**, as in **cūbe**, and even with **f**, as in **few.** The **y** sound after **d** or **n** is common in England, as in **due, new**, etc., but not in America. As exceptional, the **s** in **sure, sug'ar**, and their derivatives, is entirely displaced by the **sh** developed from the **y** sound, and the vowel is reduced to a simple o͞o (**fo͞od**) or o͝o (**fo͝ot**) sound; — see §§ 136, 137.

§ 135. (2.) ů, ů: representing a modification of the sound of ū (ūse; § 131), in unaccented syllables; as in **ū-nite', grad'ū-ate, ac'tū-ate, em'ū-late, tū-mul'tū-ous, jū-di'cial, ad'jū-tant, con'jū-gate, sū-preme', in'sū-lar, lū-cid'i-ty, in-dis'so-lū-ble, val'ū-a-ble, vir'tūe, na'tūre, ver'dūre, cen'sūre, sen'sū-al, is'sū-ing, meas'ūre**, etc. The sound differs from that of ū (§ 132) by taking for the final element the wide o͝o (**fo͝ot**) instead of the narrow o͞o (**fo͞od**); and, after **t**, by a partial or entire change of the **y** into a more or less clear **sh**, and usually after **d** into a **zh** glide; as in **na'tūre, ver'dūre**, etc. A preceding **s**, in a syllable not initial (as in **cen'sūre, sen'sū-al**, etc.), takes more commonly an **sh** sound, and a **z** or an **s** sonant (as in **az'ūre, sei'zūre, lei'sūre, cas'ū-al**, etc.) takes a **zh** sound, and the vowel becomes nearly, if not quite, the same in sound as ụ (**joy'fụl**, § 138). But the preceding **s** remains unchanged in initial, and sometimes also in medial syllables; as in **sū-preme', con'sū-lar, in'sū-lar**, etc. After **j** or **l** in the same syllable, the vowel has nearly or exactly the sound of ụ (**joy'fụl**), as in **jū-di'cial, ad'jū-tant, lū-cid'i-ty, in-dis'so-lū-ble**, etc.; — see § 138. Before **r**, in rapid speech, the sound often inclines towards ĕ (ev'ĕr), as in **na'tūre, cen'sūre**, etc., — see § 90.

NOTE. — The original sound of the letter **u**, as in the Latin, — and as still retained in the Italian, Spanish, and German, — was the simple sound of o͞o (**fo͞od**) or o͝o (**fo͝ot**). In the time of Chaucer, the pronunciation of this letter in the English, — which was then substantially, if not absolutely, the same as in the French, — may even then have fluctuated between the perfectly simple sound now heard in the French and a sound more or less decidedly diphthongal, as it appears to have done in England, for the leading sound of the letter, down through the seventeenth and far into the eighteenth century. The **y** sound made its way into the diphthong and gained prominence in it by degrees, while the diphthong itself gradually gained a more full development, with greater weight and a tongue position farther back given to the terminal element.

§ 136. (3.) ụ, ụ. only after **r**, as in **rụde, rụ'mor, rụ'ral.** The sound does not differ essentially from that of o͞o (**fo͞od**, § 126). It may, however, with propriety take a brief initial in o͝o (**fo͝ot**), or nearly this, somewhat more prominently than does the o͞o after other consonants (§ 127). The sound occurs after **s**, as exceptional, in **sure** and its derivatives, the **s** heard as **sh** (§ 134).

§ 137. (4.) ụ, ụ: as in **bụll, fụll, pụt, pụsh, pụll**, etc.; with sound the same as o͝o (**fo͝ot**, § 128); heard also in **sụ'gar** after **s** as **sh** (§ 134).

§ 138. UNACCENTED the ụ occurs in the syllable **fụl**, as in **joy'fụl, joy'fụl-ness, fụl-fill'**, etc.; also, after **r**, in **rụ-gal'i-ty** and a few other words (see § 39). The û after **s** with an **sh** sound, and after **s** or **z** with a **zh** sound, is reduced nearly or quite to the equivalent of this simple element; as in **cen'sūre, sen'sū-al, cas'ū-al, az'ūre**, etc.; and also after **s** with its proper sound, and after **l** and **j**, as in **sū-preme', con'sū-lar, lū-cid'i-ty, ad'jū-tant**, etc. — See § 135.

§ 139. (5.) ů, û as in **ûrn, ûrge, bûrn, hûrl**, etc, with equivalents as in **worm, journal**, etc., before **r** only The sound, as more commonly heard, is the narrow form of the mid-back-mixed vowel (§ 16), corresponding to the wide ŭ (ŭp, § 141). But the pronunciation varies considerably, — the vowel taking sometimes an extreme low-back position like that in **sir** or **work**, as these words are very commonly spoken by the Irish, but often taking the mid-front position of ĕ (fĕrn). The variation is both in different words and in the same words as from different persons. See § 87, and the reference to the dictionaries of Stormonth and Ogilvie in § 88.

§ 140. The vowels of the mixed kind (§ 16) are closely allied to the consonant **r**, — those of the back position, ŭ (ŭp), û (ûrn), to the **r** near the back palate; and the front, ĕ (fĕrn), ĕ (evĕr), to an **r** further forward. The curvature of the tongue, in their formation, as similar to that for **r**, is the ground of this relation. These vowels glide on to the **r** in such a way that the point of transition from vowel to consonant is not clearly discernible, — or, when the **r** loses all consonant quality, is absolutely indiscernible. See §§ 250-252.

§ 141. (6.) ŭ, ŭ: as in **ŭp, bŭd, tŭb, ŭs, ŭsh'er, ŭn'der**, etc.; the "short **u**;" with equivalents as in **sŏn, does, blood, touch**, etc. The vowel is the mid-back-mixed-wide (§ 16) in our scheme; it is placed among the mixed by Mr. Ellis, though ranked not as a mixed but as a back vowel by Mr. Bell. — See § 24.

§ 142. In UNACCENTED SYLLABLES the vowel occurs in **cir'cŭs, stŭb-mit', vol'ŭn-ta-ry, cir'cŭm-stance**, etc., and falls readily into the "neutral vowel." The **ou** in **pi'ous**, etc., **oi** in **por'poise, eo** in **dun'geon**, etc., usually the **ow** in **bel'lows**, etc., and the final element of the **eou** in **right'eous**, etc., and of **iou** in **gra'cious**, etc., and the **o** in **at'om, irk'some, na'tion**, etc. (§ 124), have essentially the same sound.

§ 143. (7.) **U** *silent:* as part of the silent digraph **ue** in **plague, rogue, tongue, cat'a-logue, an-tique'**, etc., and of others in **gauge, guard, guess, co-quette', guide, build, pla'guy**, etc. See references in § 130.

§ 144. (8.) **U**, *with consonant value*, and the sound of **w**, before another vowel: after **q** or **g**; as in **qual'i-ty, quite, ques'tion, gua'no, lan'guage**, etc.; also after **s**, as in **per-suade', suite**, etc.; — forming in these cases the initial element and the consonantal glide of an impure diphthong (§ 19*b*). The **kw** part of the sound in **quality**, etc., may otherwise be regarded as a compound, or diphthongal, consonant; — see § 213, NOTE. The **w** sound is derived, of course, from the

original sound of **u** as the equivalent of **o͝o** (fo͝od), or **o͝o** (fo͝ot). So far as **u** gives up a part of its leading modern sound by fusion with a preceding **t** or **d** or **s**, — as in **nature, verdure, sure**, etc., — it has in that way consonantal value to that extent.

Y.

§ 145. This letter, as a vowel, has four sounds; that is, all the sounds of **i** except **ĭ** (**pĭque**), viz.: (1) **ȳ** = **ī**; as in **de-fȳ′, stȳle, flȳ**; (2) **ў**, the equivalent of **ĭ** (**ĭdea**); as in **hў-e′na, mў-ol′o-gy**; (3.) **ў** = **ĭ**; as in **mўmph, lўr′ic**, and (unaccented) **pit′ў, hap′pў**; **ey** final serving thus instead of **ў**, as in **hon′ey, mon′key, ab′bey**, etc., (4) **ў** = **ē** or **ĭ**; as in **mўrrh, mўr′tle** and (unaccented) **zeph′ўr.**

The UNACCENTED **ў** final does not fall to quite the least accent such as is taken by **ĭ** in a medial syllable; as in **van′ĭ-tў**, etc.

For **y** as part of a digraph, or trigraph, or diphthong, see §§ 44, 48, 49, 76, 80, 99, 129. For **y** as consonant, see § 272.

ANALYTICAL SURVEY OF THE ENGLISH CONSONANT SOUNDS.

DIFFERENCE BETWEEN VOWEL AND CONSONANT.

§ 146. RESONANT ACTION, OBSTRUCTIVE ACTION. Resonance in an unobstructive oral passage is the characteristic feature of the vowels; and the peculiar resonance in the case of each vowel is what mainly distinguishes it individually from the others. Obstructive action is the leading feature of the consonants, and the kind and manner of the obstruction is what mainly distinguishes one consonant from another.

§ 147. Obstruction is, indeed, not absent from the vowels. The vocal cords are set in vibration only as they obstruct the outgoing stream of breath. But this action does not go to differentiate the vowel qualities. There is, too, for the vowels, what may in one sense be called an obstruction in the oral passage; but only, or mainly, as involved in the formation of a vowel chamber (§ 7), and thus as reenforcing instead of obstructing the sound, and as subservient to the resonance that imparts the vowel quality. So far as it acts otherwise, it gives to the vowel more or less of a consonantal character.

§ 148. Resonance, on the other hand, is not absent from the consonants. The nasals, **n, m, ng** (§ 207), are marked as such by their peculiar resonance; and each has a different resonance to distinguish it from the others. The same is true of the sonant mutes, **b, d, g** (§ 195). But all these are ruled out from the vowel category by the absolute closure of the oral passage Except in the nasals and the sonant mutes, whatever resonance there may be has no share in forming the characteristic quality of the consonant.

§ 149. In the word **woo**, we have the consonant and the vowel made by nearly similar organic positions, and thus both coming close to the border line of separation but, for the consonant, the organs are relaxed so as to act mainly by obstructive friction; while, for the vowel, they are in the tense condition fitted for resonance in the vowel chamber. For the word **ye**, the case is essentially the same

§ 150. RELATION TO THE SYLLABLE. The respective relations of vowel and consonant to the syllable are a natural consequence of their different characteristics as above stated. It is thus that vowel and consonant readily combine into one continuous sound without remission of stress, in passing either way, from vowel to consonant or from consonant to vowel, — close junction being made by the glide (§ 161) from the one to the other; while it is only in certain cases that consonants can flow into consonants with no break or no sound interposed

§ 151. The open, resonant character of the vowels fits them for stress; and this, together with their ready junction to any consonant, makes their occurrence natural when stress is employed. Hence, no fully accented syllable is without a vowel, and a vowel is ordinarily essential under the weak stress of a slightly accented or an unaccented syllable. The only exceptions are made by the consonants **l, m, n**, which sometimes, either with or without a voice-glide, discharge the vowel function, as in **par′don, cous′in, peo′ple, peo′pled, chasm** (kăz′m), etc — See §§ 95, 158, 194.

II. THE FORMATIVE ELEMENTS OF THE CONSONANTS.

§ 152. What we call the elementary sounds of speech, — and indicate for the most part by separate alphabetic characters, — are more or less composite in their nature and mode of formation. This is especially true of the consonants, so that, in order to study the consonants successfully, it becomes necessary to inquire into what we may call their Formative Elements, or the several modes of action which go to their making.

There are eight such modes of action to be noted, as follows: —

§ 153. (1.) BREATH SOUND. This is produced by forcible action of the breath impinging upon the organs at the place of obstruction Thus we have **f, s** (in **so**), **sh**, and **th** (in **thin**), and the aspirate **h**, — see §§ 181, 198. Of this general kind is the explosive action (§ 157) of the surd mutes, **p, t, k**, and of the consonantal diphthong **ch**, as in **chin**

§ 154. In *whispered* speech, we have breath sound only The breath-sound consonants are precisely the same in loud speaking as in whispering. The whispered vowels are breath sounds, made by friction of the breath upon the vocal cords, as set too wide apart for tone vibration, while yet the sound is modified by resonance so that the vowels are individually recognized. The same kind of action upon the vocal cords may also be substituted for tone in whispering such consonants (**b, z, l**, etc., § 155) as have tone in loud speaking. — See § 5.

§ 155. (2.) OBSTRUCTED TONE. By this is meant tone proceeding from the larynx, and either partially suppressed or blunted and weakened, or otherwise obstructively modified.

Thus it is, in one or the other of these ways, in the nasal consonants, **m, n, ng**; in the sonant mutes, **b, d**, hard **g** (§ 196), and in the consonantal diphthong **j** (§ 211), otherwise written **dg** or simply **g** (soft), thus also in **w, v, th** (in **thy**), **z, zh** (the **z** in **azure**); and thus in **y, l, r** — See §§ 199, 200, 201.

§ 156. (3.) MUTE ACTION. In certain cases, all sound is shut off, leaving an interval of silence, during which the oral passage is closed at some place, — certain audible effects being produced in connection with the opening or closing, or both the closing and the opening, of the passage, before and after the interval.

This occurs in the case of the surd mutes, **p, t, k**; and of the consonantal diphthong **ch**, as in **church, hatch**, etc. — See §§ 185, 210.

§ 157. (4.) EXPLOSIVE ACTION. The mutes (§ 184), both surd and sonant, are characterized by an explosion, occasioned by pressure of the breath confined within the closed oral passage followed by sudden release of the closure; as in **pea, bee, too, cow**, etc. — See §§ 186, 191

§ 158. When **t** or **d** is followed by **l**, as in **bat′tle, l′dle, hur′tle, bus′tle**, the release of the closure will be only partial, that is, at the sides of the back tongue, as required for the **l**; — see § 241. When **t** or **d** is followed by **n**, as in **eat′en, of′ten, wid′en**, etc, there will be no release of the oral closure, and the explosion will be nasal, made by breaking the contact between the soft palate and the pharyngeal wall, — the tone of the nasal consonant thus opening abruptly; thus **of′ten** differs from **or′phan** with **r** suppressed, though not, like **eat′en**, sounding the initial of the **t**, — see § 243. When **p** or a **k** sound is followed closely by **l** or **n**, as in **open, people, ply, plea, clay, buckle, sicken**, etc, the breaking of contact will be in two places at nearly the same instant.

NOTE — An explosive action of the vocal cords produces the abrupt beginning of a vowel or other sonant element called the "catch of the glottis" (§ 163).

§ 159. (5.) OCCLUSION, IMPLOSION By *occlusion*, is meant the sudden closing of the oral passage by the lips or otherwise, the air being at the same time forced against the barrier thus interposed. By *implosion*, is meant the sudden compression of the air, in the oral passage, behind and against such a barrier This action is ordinarily, or so at least in English, simultaneous with occlusion A peculiar resonance will by such means be imparted to the sound that accompanies or immediately follows the movement [1] Those modes of action are, of course, limited to the stopped, or mute, consonants. — See § 189

NOTE. — An occlusion at the vocal cords produces the abrupt ending of a vowel, or other sonant element, called the "check of the glottis" (§ 163) A *hiccough* is a similar (spasmodic) action of the vocal cords together with a movement of inspiration.

§ 160. (6) GLIDES Consonants, and classes of consonants, are characterized by certain effects, as the voice passes from consonant to vowel or vowel to consonant, which sometimes, though appertaining really to the vowel, yet contribute essentially to the character we ascribe to the consonant, and their recognition is in all such cases necessary to a full knowledge of the consonant. They are special cases of what are called *glides* (§ 162)

§ 161 When a consonant is followed by a vowel in the same syllable, as in **say, saw, toe, show, no, row, beau, go, day**, etc., there is of necessity an interval during which the action passes from the organic position for the consonant to that for the vowel, and during which the sound will not be at any time the sound proper to the consonant or to the vowel. In passing from vowel to consonant, as in **ass, ought, ash, on, or, add. ebb, egg**, etc., we have the above described action reversed. Thus, in the glide to or from a nasal consonant, — as in **on, no**, — there will be a gradual taking on or putting off of the nasal quality.

§ 162 The term "glide" — meaning an intermediate sound connecting two successive elements — is properly applicable, not only with reference to quality of sound, as above explained, but also with reference to *stress* as *gradual* or *abrupt*, in the transition from one element to the other The meaning with this application is of much the greater importance in the discrimination of consonant quality Our present purpose accordingly requires that we consider the different FORMS OF ABRUPTNESS with which an element may be begun or ended.

NOTE — It is to be remarked, by the way, that the term "glide" is, by Mr. Bell, applied also to the initial and vanishing elements of a vowel or consonant apart from connection with others preceding or following

§ 163 *One form of abruptness* is produced, as initial, by forcing a passage through between the vocal cords pressed tightly and resistingly together, thus striking the tone abruptly, — or, as terminal, by checking the tone abruptly through the reverse process. Such action is called the "catch of the glottis," or the "check of the glottis;" the former more properly describing the action as initial, and the latter, as terminal. The abruptness may vary in intensity, and in the lowest degree will be hardly perceptible as such at all. The matter here set forth is important for the characterization of the surd mutes, **p, t, k** (§§ 186, 189).

NOTE. — A vowel, by itself, may be uttered with abruptness of this kind; or, as initial, may have it with no consonant preceding, or, as terminal, with none following. But the abruptness may vary in degree, so that it becomes impossible to draw a precise dividing line between the abrupt and the gradual; or between what Mr. A. J. Ellis calls the "check-glottid," on the one hand, and the "clear glottid," on the other, in the "attack" and the "release" of the vowels. In English pronunciation, a marked abruptness of the kind in the vowels, apart from consonant connection, is not usual, except in some special cases of emotional emphasis. But in the German, and still more in the Danish, it appears as a characteristic of the normal pronunciation.

§ 164. *Another form of abruptness*, initial or terminal, occurs when the breath part of an **h** sound, or any other breath sound, precedes or follows. In the case of **h** initial, as in the exclamation **ha**, a momentum is given to the breath organs and the breath current, while the vocal cords are wide apart, and thus they are struck

[1] A special kind of implosion is described by Dr C H Merkel, as made by an upward thrust of the larynx in pronouncing b, d, and g, in German, in certain cases

forcibly and suddenly the instant they are brought together for tone vibration; while in the case of terminal **h**, as in **ah**, the tone ceases abruptly the instant the cords are relaxed and separated for the passage of the toneless breath; — see § 181. For the surd fricatives, **f**, **s**, **sh**, **th** (§ 198), the effect is similar, with the only difference that arises from the less force employed; — as in **foe**, **see**, **show**, **thin**, **off**, **ass**, **ash**, **bath**, etc., as such syllables are commonly uttered.

§ 165. (7.) CLICKING. This is altogether different from breath sound and from laryngeal tone. The sound is produced by the *sudden and forcible impact* of one surface upon another, or by the *sudden and forcible separation* of two adherent surfaces. Sounds, we know, can be produced in such ways by the hands; and in some such ways, which are familiar to everybody, by the lips, and by the tongue within the mouth. Action of this general description actually bears a not unimportant part in the articulation of the mute consonants (§§ 186, 189); and, as such, comes under the same general category with the so-called "clicks," which form a striking feature in the languages of some uncivilized peoples.

§ 166. (8.) TRILL. This, in speech, consists in a series of rapidly recurring partial, or perhaps sometimes entire, interruptions of a prolonged sound, as the effect of a current of breath, sonant or toneless, driving some one of the organs away from a position of contact or of proximity with another, to which it constantly returns by elastic or muscular force; — as in the case of the trilled **r**. Such action is possible, not only with the tongue, but with the lips, with the uvula, with the epiglottis, and with the vocal cords. The general process is essentially the same as that by which tone is itself produced: a trill sufficiently rapid would be heard as an untrilled and smooth tone.

NOTE. — A trill, in music, differs from a trill of the kind above described, by alternating between two tones of slightly differing degrees in pitch, — and, in singing, is effected, of course, by action of the vocal cords.

III. THE MORE GENERAL CLASSES OF THE CONSONANTS.

The consonants may be classified in a general way under the following heads, as they are also exhibited in the Table subjoined (§ 179).

§ 167. (1.) ORAL and NASAL. For the oral consonants, the passage from the larynx through the nose is, or at least should be, entirely cut off, by having the soft palate closed upon the wall of the pharynx, as a valve, — thus leaving open the passage through or into the mouth For the nasal consonants, **m**, **n**, **ng**, the passage through the nose is open, by depression of the soft palate, thus allowing the stream of vocalized breath to pass, while the way through the mouth is cut off.

§ 168. The nasal consonants are made by breath sound in whispering; but in speaking aloud are not normally so made in any case

While the oral consonants form a quite general class, the nasal consonants, as a special class, will have further consideration hereafter (§ 207).

§ 169. (2.) SONANT and SURD. The consonants that are made with obstructed tone, as before described (§ 155), are, because of their tone quality, distinguished as "sonant," — the same term being applied to the vowels, made all with pure tone. The consonants that are made with breath sound only (§ 153) and those made by mute action (§ 156) are denominated "surd," because of the absence of tone. The sonant elements are otherwise called *voiced*, or *vocal*, or *intonated*, or *phthongal* The surds are otherwise styled *nonsonant*, *nonvocal*, *voiceless*, *unintonated*, *toneless*, and sometimes, less properly, *whispered*. The surds are sometimes distinguished as *sharp*; or, in the case of **p**, **t**, **k**, as *hard*, and the cognate sonants, as *weak*, or *flat*, or *soft*. The substitute for tone, employed in whispered speech for the sonants, was described above (§ 154).

§ 170. All of the sonant consonants have corresponding, or cognate, surds, except **r**, **l**, **m**, **n**, **ng**, **w**, **y**, as shown in the Table below — See §§ 179, 213, 214.

§ 171. The difference between sonant elements and breath sounds is not the difference between tone and noise. The breath sounds are indeed noise, or such in large part; but it is noise of a special kind. Some of the sonants, and indeed any of them at some times, may have a large admixture of noise, yet without, or apart from, any element of breath sound.

§ 172. The rule that a surd consonant is followed, in the same syllable, by only a surd, and a sonant by only a sonant, — as in **whipped** (hwĭpt), **robbed** (rŏbd), **locked** (lŏkt), **egged** (ĕgd), **lashed** (lăsht), **lodged** (lŏjd), **hissed** (hĭst), **advised'** (-vīzd'), **whips** (hwĭps), **babes** (bābz), **laughs** (lăfs), **lives** (lĭvz, *v.*, or **livs**, *n. pl.*), **chintz** (chĭnts), **apse**, **adz**, etc. — holds in most cases, but does not hold for the sonants **l**, **r**, **m**, **n**, **ng**, **w**, and **y**; as in **help**, **art**, **curse**, **hence**, **else**, **smile**, **smite**, **ply**, **try**, **fly**, **ink**, **quill**, **cue**, — with **bulb**, **hard**, **Mars** (-z), etc., — except in the case of verb and noun inflections, as in **kills** (kĭlz), **killed** (kĭld), **curs** (kûrz), **hens** (hĕnz), etc. We have an exception also in the **dth** of **width** and **breadth**. Compare also **lymph**, **strength**, and see § 215

§ 173. It is not difficult to utter the surds, — that is, the mere breath sounds, — corresponding to the sonants, **l**, **r**, **m**, **n**, **ng**, **w**, and **y**; but, except in whispering, such sounds form no part of the English language, as ordinarily and properly spoken.

§ 174. The preceding statement is subject to the qualification that the surd form of **l**, **r**, **m**, **n**, **w**, or **y**, may allowably occur as a glide (§ 162), especially after a continuous surd; as in **flow**, **sly**, **free**, **smith**, **snow**, **swim**, **fume** (§ 132); and, indeed, sometimes after a mute, as in **play**, **try**, **twine**, etc. But this is merely a transitional sound, through which the sonant form of the same is quickly reached. The **sh** sound heard, whether properly or improperly, in **tube**, etc (§ 134), is evolved, as a glide, out of the surd form of **y**, — see § 187 Were the **y** glide to lose sonant quality throughout, we should have, for **tube**, a quite improper pronunciation like **tshoob**.

§ 175. By some authorities, and particularly by Dr. James Rush and others after him, — though by one or two at a much earlier date, — the term *aspirate* has been used as an equivalent for *surd* as here employed; aspiration being taken to signify breath sound simply. The term was originally employed to distinguish the third variety of the mutes in Sanskrit and Greek, namely, **p**, **t**, **k**, as followed by a rough breathing, or **h** sound (**p** + **h**, **t** + **h**, **k** + **h**). As these sounds were finally replaced in the Greek and Latin by the mere breath sounds, like **f**, **th** as in **thin**, and **ch** as in the German, the term "aspirate," or "aspirated mute," was carried on and applied to these. But, aside from this, the term "aspirate," by most grammarians and most phoneticians, is applied exclusively to the rough breathing or the **h** sound.

The sonant consonants were denominated by Dr. Rush "subtonics;" for which term, by others, "subvocal" has sometimes been substituted.

§ 176. (3.) MOMENTARY and CONTINUOUS. The mute consonants, whether surd, **p**, **t**, **k**, or sonant, **b**, **d**, hard **g**, are necessarily brief in duration: they can not, like the continuants, be sustained as long as the breath will hold out. The same is the case with the compound consonants, **ch**, **j**, etc., of which the mutes, **t**, **d**, form a part; — see §§ 210, 211. The **h** sound has (§ 181), — as have also its compounds (§§ 212, 214), — essentially an abrupt character, which brings it properly among the momentary.

All the sonant elements outside of the mutes, and all the breath-sound consonants except the **h**, are continuous, being limited only by the duration of the breath in a single expiration.

§ 177. (4.) PLACE OF ARTICULATION. The classification of the consonants according to the place of obstruction especially concerned in their formation, is of great importance. The total obstruction may cover much more than the place here referred to, and meant to be designated as the Place of Articulation. Thus, for **t**, **d**, **n**, and **r**, the whole length of the tongue is involved, from the root to the tip; but it is the point, or extreme front part, that is especially concerned in the effect. In the case of **l**, the whole of the tongue is also involved; the contact being made at the tip, and the margin about the front; while it is the sides of the tongue back of this that are more directly concerned in the production of the sound; and this part is, therefore, to be taken as the place of articulation.

§ 178. LABIALS, DENTALS, PALATALS, GUTTURALS, etc. With the place of articulation at the lips, we have the *labial* consonants **p**, **b**, **m**, **w**; though the **w** involves obstructive action between the back tongue and the soft palate, as well as at the lips. The **f** and **v**, though sometimes made by the lips alone, yet being commonly made with the upper teeth against the lower lip, are properly described as *labio-dentals*. The proper articulating position for **t**, **d**, **n**, **s**, **z**, and one variety of **r**, in the English, is taken with the point of the tongue on the hard palate, commonly not far from the front teeth, though sometimes actually on the teeth; or again, the part of the tongue back of the point may be employed, instead of the point. These consonants are classed together under the name of *dentals* The **th**, surd (as in **thin**) and sonant (as in **thy**), — made between the point of the tongue and the teeth, — may be designated as *lingua-dental*; though, when the teeth are wanting, the sound may be well produced between the tongue below and the gums and lip above; it is, however, commonly ranked among the *dentals*. The place of articulation for **sh**, **zh**, and the compounds **ch** and **j**, and for one variety of **r**, is on the upper surface or the point of the tongue and the back part of the hard palate; and they are therefore called *palatals*. Also, **y**, and even **l**, may be classed with them under the same name; the place of articulation for these includes a part of the soft palate as well as of the hard palate The *gutturals* are **k**, **g** hard, and **ng**, the place being on the soft palate and the back part of the tongue. The nasals, **m**, **n**, **ng**, may be discriminated as *labio-nasal*, *lingua-nasal* or *dento-nasal*, and *gutturo-nasal*.

All these are sometimes arranged in three classes, namely *gutturals*, and *labials*, as above, with an intermediate class under the name of *linguals* and sometimes with the designation *palatal* substituted for *guttural*.

§ 180. *Supplement to the Table.* For the sake of simplicity, none of the compound, or diphthongal, consonants, except **ch** and **j**, are included in the Table. Others which might have a place in it will be described hereafter (§§ 212–218).

There are some who would insist on a place in the Table for a surd (**wh**) corresponding to the sonant **w**, and for a special surd corresponding to **y**, — see § 183.

IV. SPECIAL CLASSES OF THE CONSONANTS.

§ 181. THE H SOUND. The consonant **h** stands by itself as an element *sui generis*. It differs in many respects from the other breath sounds. It has no fixed place of articulation, except that the glottis always has a share in its formation. Its articulative position is various, being always very near to that of the vowel with which it is joined, and differing from it only in being somewhat wider. It differs, too, from other breath sounds in being made with a wider opening and the emission of a greater volume of breath, and in being made with some friction all along the oral passage. But what distinguishes it most of all is its abrupt character, which requires it to be classed as one of the *momentary* elements. It has been usual to describe it as continuous; but if, say in the syllable **ha**, we lengthen out the **h** as a breath sound, we still have to give a new impulse before we strike the vowel; and such prolongation is not normally employed. The abrupt glide to or from the vowel, as in **ha** or **ah**, is really the essential thing: the breath may be expelled with so little friction as to be quite inaudible, and yet the **h** be perfectly recognized by the abrupt effect in the vowel. — See § 175.

§ 182. The articulative procedure for this element is a movement: — at the outset, in the case of **h** initial, as in **ha**, **ho**, **hay**, **he**, the glottis is wide open, that is, the vocal cords are widely apart, and the position of the organs in the mouth is more open than that required for the following vowel; at the end of the movement, the vocal cords come close together for tone, and at the same instant the organs fall into position for the vowel. In the case of a final **h**, as in **ah**, **oh**, if the **h** is actually sounded, the foregoing process is reversed. — See § 164.

§ 183. The **h** sound is capable of preceding or succeeding any voiced consonant; though in such case liable to run into the voiceless form of the consonant. In the

ancient Greek, as the rough breathing, it often preceded **r**, as well as the vowels. In the Welsh language it sometimes precedes **l**, and makes also the **l** itself into a breath sound, either wholly or in part. In English, it precedes and is compounded with **w** in **when**, etc. (§ 212), and **y**, in **hue, humid**, etc. (§ 214); though in these cases a brief vowel sound actually intervenes before the consonant part of the **w** or **y**. There is no **h** sound in the digraphs made with **h**, — as **sh, ch, gh, ph, th**; — see § 238.

§ 184. THE MUTES. These are the chief portion of the momentary consonants. They comprise two subclasses, namely, the *surd mutes*, — otherwise called *pure mutes*, — **p, t, k**, to which alone the term "mute" is strictly applicable, and the *sonant mutes*, or *impure mutes*, **b, d**, hard **g**. The mutes are sometimes called *stops*, or *checks*, and sometimes *explosives*, and by some *divisives*.

§ 185. THE SURD MUTES. These, with **h** (§ 181) and **ch** (§ 210), occupy the first column of the Table (§ 179), — as the Surd division of the Momentary. The surd mutes, **p, t, k**, are to be studied as they occur in three different situations, namely. — at the beginning of a syllable, at the end of a syllable, and in the middle between the end of one and the beginning of another syllable.

§ 186. (1.) When *initial*, and opening upon a vowel, as in **pea, pole, tie, toe, kill, cut**, etc., — they give (*a*) an audible puff (§ 157) made by the sudden release of breath accumulated and compressed within the distended walls of the whole or a part of the oral cavity; they also give (*b*), as co-instantaneous with this, an abrupt beginning of the vowel, such as, in a forcible utterance of the syllable, amounts to a decided degree of the explosive action called the "catch of the glottis" (§ 163) The preparatory steps are the accumulated breath in the oral cavity, and after this the closed glottis; then comes the simultaneous explosion of breath and of tone. Besides all this, there may be (*c*) a slight click (§ 165), by the sudden separation of the adherent surfaces of the lips or of the tongue and palate, that will contribute somewhat to the effect.

To have the breath explosion, with an interposed **h** sound, actually precede the utterance of the vowel is not the proper English mode; the glottal catch is quite different from the abrupt beginning of a vowel made by an **h** sound (§ 164). Yet, when the interposed **h** sound is very brief, the deviation from the more usual mode will be unperceived by ordinary ears, or noticed only as a somewhat softer style of enunciation, — such deviation may be regarded as unimportant.

By the combined simultaneous actions above described, a clearly distinguished impression is made upon the ear and the mind, though not easily or ordinarily resolved into its component elements.

§ 187. The total action, as above described, is the same, with certain modifications, when the surd mute takes after it a vocal consonant instead of a vowel With **r**, as in **pray, try, crow**, etc., the action is essentially the same as in the case of a vowel; unless, indeed, the surd form of the **r** intervene (§ 174) as a glide It is essentially the same, also, with **l** after **p**; as in **play, plow**, etc With **l** after the **k** sound, as in **clay, cling**, etc., the attempt at simultaneous action will make the words sound as if written **tlay, tling**, etc The glide from a surd mute to a **y** sound tends to develop more or less of a sibilant quality, as in **tune, cube, pure, na'ture**, etc., — see §§ 134, 174.

A surd mute never takes after it in modern English a nasal consonant, as was done anciently in the original of the word **know**, and in the Greek, from which we derive the word **pneumatic**.

§ 188. An initial surd mute is never, in English, except in one instance, followed by or compounded with a nonsonant element. An English syllable can not begin, as may be done in some other languages, with a **ps, ts**, or **ks**, or with a **pf, tf**, or **kf**, or with a **psh** or a **ksh**. The compound, or diphthongal, **ch** (**tsh**), as in **chin**, forms the single exception to the general rule. — See § 210.

§ 189 (2.) When *final*, and joined closely to a preceding vowel or other sonant element, as in **up, hat, neck**, and in **harp, halt, hark**, etc., there is (*a*) a *percussive* action by the sudden impact of the organs, — lip against lip, or tongue upon palate, — giving a kind of click (§ 165), plainly audible for **p** and **t**, and slightly so for **k**, (*b*) the vowel is at the same instant abruptly cut off by an absolute closure of the glottis, which may amount decidedly to the so-called "*glottal check*" (§ 163); and (*c*) the current of vocalized breath is at the same instant suddenly checked and compressed by the mode of action that was explained (§ 159) as *occlusion* with *implosion*.

§ 190 The surd mute joins the preceding element more closely in some cases than in others; and thus brings out more decidedly the effects as above described. They come out fully and strongly when, in an accented syllable, a wide (§ 13) short vowel precedes, — as in **up, hat, let, sit, hut, sick**, etc, — and less so with a narrow long vowel or a diphthong, — as in **hope, late, seat, make, mute, rite, out**, etc., — or with an unaccented short vowel, as in **tu'lip, ex'it, ru'nic** — See § 23.

§ 191. When the effects above described are distinctly brought out, no further action is needed to make the consonant clearly recognizable. But, even in such case, it commonly ends with (*d*) an added slight puff of breath (§ 157). In the case of a long vowel (as in **hope**, etc.), this explosive action becomes important or absolutely essential. When the surd mute is followed by a sonant of the same articulating place and beginning another syllable, the breath explosion is suppressed; as in **Et'na, ship'mate'** (see § 158), **cup'bear'er, back'ground'**, etc, as it is also when a surd continuant follows in like manner; as in **cap'tion** (-shŭn), **out'side', stop'-thief'**, etc. For the case of **s** following at the end of a syllable, as in **cats, lacks, wax, hops**, etc., see below (§ 217)

§ 192. With another surd mute preceding, as in **apt, act**, — a situation taken only by **t**, — the breath puff is the only means of indication. With a continuous breath sound preceding, there will be, besides the terminal puff of the mute, nothing more than a very abrupt ending of the breath sound; as in **cast, mask, hasp, left, washed** (wŏsht), **hushed** (hŭsht) Cases like **camp, sent, sink**, with a nasal preceding, will be found explained below (§ 215)

§ 193. (3.) When *in a middle position*, ending one syllable and beginning another, as in **sup'per, ut'ter, sit'ting, ac-cuse', up-on', cit'y, bak'er**, etc, we have all that has been described above as in the two situations. The consonant, though often written double, is really divided, or cut in sunder, one part going to one syllable and the other to the other, with, of course, an interval of silence between. In this situation, and this only, we may have all the constituents above described, and thus all the elements that in any case enter into the composition of this class of consonants. Whether the consonant shall be joined more closely to the preceding or to the succeeding vocal element, and thus give more prominence to the one part of the consonant or to the other, will depend on the principles that govern the syllabic division; — for which see §§ 275, 276.

§ 194. When, of two syllables thus connected by a surd mute, the first being accented, the second is unaccented and has an **l, m**, or **n**, serving instead of a vowel, — as in **eat'en, o'pen, sick'en, lit'tle**, etc., the explosive action of the mute is modified in the manner already described (§ 158).

NOTE. — Mr. A. J. Ellis defines the surd mute consonant as limited to the interval of silence, and relegates to the on and off glides all that immediately precedes and follows this interval. The foregoing description assigns to it wider limits, and treats what pertains to the junction with preceding and following elements as in part an overlapping by the consonant.

§ 195. THE SONANT MUTES. In these consonants, namely, **b, d**, hard **g**, we have, instead of the interval of silence that occurs in the case of the surds, a muffled tone, made by a current of vocal breath injected into the closed cavity, and taking the place of the voiceless breath that is injected in the other case (§ 186).

§ 196. When the sonant mute *begins a syllable*, — as in **buy, day, go, blow, bray, dry, glow, grow**, — it opens explosively upon the following element; but the vocal current that issues through the glottis is slender in volume, and hence the pressure and the consequent explosive effect will be comparatively slight. As the tone vibration of the glottis continues uninterrupted in passing on to the following element, this precludes anything like the "glottal catch" (§ 186) of the surds.

In the sonant mutes, *at the end of a syllable*, the percussive action which we have in the case of the surds is usually and naturally absent; and the terminal explosion is feeble when given at all, — see § 189.

The whole action, in the sonants, is marked by less abruptness than in the surds. Hence the sonant mutes are sometimes described as "weak" or "soft," in contrast with the surds as "sharp" or "hard."

When occurring *in the middle between two syllables*, — as in **rob'ber, ad'der, bod'y, rid'er, beg'ging, be-gin', en'ger**, — the sonant mute, like the surd (§ 193), is divided between the syllables. When the second syllable is unaccented and made by **n, l**, or **m**, as in **maid'en, a'ble, i'dle, sad'dle, ea'gle**, — the tone runs on with hardly noticeable explosion, but with a distinct syllabic impulse on the **n, l**, or **m**. — See §§ 95, 158, 194

§ 197. FRICATIVES This term might be applied to all the continuous consonants (§ 176), even the nasals and the **h** sound included; since friction plays some part in all of them But it has been commonly limited to a portion, — and variously by different authorities. It may well be used, as it will be here, for all of the continuants except the nasals.

§ 198 SURD FRICATIVES These are **f, th** (in **thin**), **s, sh** (§§ 230, 255, 261, 263) They all require considerable force of breath, and a greater volume of breath, of course, than is expended in the cognate sonants The glide to or from a vowel is characterized by more or less abruptness, — see § 164. The breath strikes a different kind of obstruction at the several places of articulation, and thus gives the differing sounds

§ 199 SONANT FRICATIVES These are **v, th** (in **thy**), **z, zh** (the **z** in **azure**), besides **l** and **r**, and **w** and **y** The organic positions for four of these correspond respectively to those for the above-mentioned surds; — see §§ 169, 179.

§ 200 The sonant fricatives are sometimes described as *buzzing sounds;* but the kind of sound so described has never been fully investigated and explained Besides the damping and dulling of the tone, the sound is otherwise affected in a peculiar way There is, at the place of articulation, a vibration of the elastic tissue, that can be felt, and which may be perceived to vary in rapidity as the pitch of the tone from the larynx is higher or lower This responsive and secondary vibration, — to which the term *fractional resonance* might not improperly be applied, — modifies the primary tone, and with differences such as to give to the individual consonants of this class their distinctive characters

§ 201 There are, in this case, three kinds of effects supposable, and all of them perhaps may be actually combined, namely — (1) a simple tremolo effect, (2) the conversion of a part of the tone into noise, by the reaction of the obstructive organs, besides (3) the modification of the tone without disturbance of the proper musical quality due to the regularity of the vibration

§ 202 A vocal current from the larynx has not sufficient volume and force to produce breath-sound effects, — the force of the air current is to be distinguished from the force of the vocal sound as such And so the sonant fricatives are not to be regarded as characterized by an intermingling of breath sound with tone If, in the case of **z**, or of the **zh** sound as in **azure**, anything of an actually sibilant quality (§ 203) be perceptible, it probably is to be attributed to the initial or the vanishing part, and not to the body, of the consonant

§ 203. SIBILANTS. This term is applicable to such of the surd fricatives as have a hissing sound, especially **s** and **sh**, and is also applied to the cognate sonants, **z** and **zh**; — § 202.

We have the **sh** sound not only represented by **sh**, but also resulting and developed from **s** or soft **c** and a following **y** sound, — as in **sure, Asia, ocean**, etc, — and from a **t** first changed to an **s** as in the French original and followed in like manner, — as in **nation, partial**, etc. We have the **zh** sound developed from **z** or sonant **s** and a following **y** sound, — as in **azure, pleasure**, etc We have the **sh** sound as part of the **ch** in **church**, etc, and of the **ch** sound developed from a **t** and a following **y** sound, — as in **nature, question**, etc And we have **zh** as part of the compound **j**, or **dg**, — as in **judge**, etc, — and of the same sound as developed from **d** and a **y** sound, — as in **verdure**, etc — See §§ 97, 106, 134, 135, 210.

The breath sounds — such as **f**, etc. — other than sibilants may be distinguished as *simple breath sounds*.

§ 204. SPIRANTS. This term has been variously applied — by some as meaning all the fricatives, surd and sonant, with inclusion of **w** and **y** It is limited by Prof. Whitney to **f** and **v, th** in **thin** and **th** in **thy**, and the German **ch** with the cognate sonant. It might well be employed to denote all the mere breath sounds except the explosives and the aspirate **h**.

§ 205. SEMIVOWELS. The vowel **ŭ** (**ŭve**, § 76), or **ĭ** (**ĭll**, § 103), or the nearly related high-mixed vowel (§ 16), and the vowel **o͝o** (**fo͝od**, § 126), or **o͝o** (**fo͝ot**, § 128), in certain cases pass readily over, the one into the consonant **y** (§ 272), and the other into **w** (§ 267); — see § 19 *b*. Hence these consonants are called "semivowels." The term is also sometimes extended to **l, n, r, m**, as these in certain cases fulfill the office of a vowel in the making of a syllable.

§ 206. LIQUIDS. The consonants **l, n, r, m**, are called "liquids," because they flow into other consonants and others into them, as intermediates between such consonants and vowels, as in **play, pray, try, cry, fly, harp, help, camp,**

hand, smite, snow, etc. The quality belongs more fully to **l** and **r** than to **m** and **n**, the former being so employed in a greater number of cases than the latter.

§ 207. NASAL CONSONANTS. The general mode of formation for these has been already described (§ 167). The sound consists of tone from the larynx modified mainly by resonance and partly by friction. For **m** and **n** (§§ 242, 243), communication with the oral passage is open, but exit by that channel is cut off by closure of the lips, and by closure of the tongue against the hard palate. We thus have resonance in an oral chamber and in the nasal passage at the same time; and together with some friction in the latter. For **ng** (§ 246), only the pharynx and the nasal passage are concerned; the soft palate closing down upon the back tongue so as to cut off the oral cavity forward of this point. Friction may be increased by the muscular action of the nostrils, and of the lips and cheeks as connected with them. Too much friction will produce a disagreeable nasal twang.

The **ng** can not in English begin a syllable. An **n** or **m**, — but not an **ng**, — may be preceded by **s** sharp at the beginning of a syllable; as in **snow, smile**, etc.; an **n**, but not an **m** or **ng**, may take the **s** sound after it at the close of a syllable; as in **hence, dance, wince**, etc.; all three may take a **z** sound after them; as in **hams, combs, wins, tons, hangs, wings**, etc.

During the glide (§ 161) from a nasal consonant to a vowel, as in **my, no**, etc., or to an **s** or **z** as above, the previously depressed soft palate will be in movement toward contact with the pharyngeal wall, and not yet actually in contact with it, while at the same time the lips, or the tongue and palate, are changing from their positions of contact. The glide sets in at the beginning of these movements; thus somewhat of the quality of the nasal consonant will be carried on into the following element. A similar effect will ensue in the glide from a vowel or an **s** to a nasal consonant, as in **an, am, snow**, etc. In the case of a vowel between two nasal consonants, as in **man, name**, etc., there will be a twofold effect of the kind. But, in this as in all cases, the nasal quality, in well-spoken English, will be limited to the brief gliding portions of the vowel. — See § 161.

§ 208. For the way in which the nasals are joined to a preceding explosive consonant, as in **eat'en, o'pen, Whit'ney, Step'ney, hack'ney, hack'man**, etc, see above (§§ 95, 158, 191); and for the peculiar form which they take in the compound consonants **mp, nt, nk**, etc., as in **jump, sent, ink**, etc., see below (§ 215). For **n** or **m** as filling the place of a vowel, see § 95.

§ 209 COMPOUND, or DIPHTHONGAL, CONSONANTS. Certain consonant sounds are composed of more simple consonant elements so blended that the product is properly described as *diphthongal*. Only two of this kind were presented in the Table given above (§ 179). These and others will here be explained.

§ 210. (1.) The **ch**, or **tsh**, as in **church, watch**, has for the initial element what is essentially a **t**, though a **t** made somewhat further back on the tongue than an ordinary **t**, — or rather, the contact, while inclusive of the point, covers a part of the tongue back of the point. With this is combined an abrupt **sh** sound, made by a position somewhat further forward and more open than an ordinary **sh**, and replacing the puff of simple breath that is characteristic of **t** (§ 186) It is to be noted, however, that, when opening upon a vowel in the same syllable, this **sh** sound wholly precedes the vowel, and is not, like the explosive breath of a simple **t**, simultaneous with the beginning of the vowel sound (§ 186). While **sh** by itself is a continuous consonant, the compound (**tsh**) is to be classed as momentary (§ 176).

The **ch** sound is followed in the same syllable by no consonant sound except only by **t**; as in **watched** (wŏcht), etc. — See §§ 172, 229

In most cases the **ch** sound has been developed from an original Anglo-Saxon or Latin **k** sound; as in **church, chin, hatch, charity**, etc. It is also made by the fusion of a **t** with a following **y** sound; as in **question, righteous, picture, nature**, etc. — See §§ 97, 106, 134, 135, 187, 203.

§ 211. (2.) The **j**, or **dg**, or **g** soft, — as in **jar, edge, judge, gem**, — is compounded of a **d** and a **zh** (the **z** in **azure**) sound, with the same conditions and qualifications as those above stated for **ch**. It is throughout the sonant correlative, or cognate, of the surd **ch**.

§ 212. (3.) Concerning the **wh** as in **when, what, why**, etc., there has been a difference of opinion, especially as between American and English authorities; the former contending for an **h** sound preceding a proper **w**; while Messrs. Bell, Ellis, Sweet, and others insist that the **wh** represents simply the surd correlative of the ordinary sonant **w**. Either way, and at all events, one thing is clear: the sound is abrupt and momentary (§ 176), instead of being continuous like the sonant **w**.

As a matter of fact, this **wh**, by the greater part of even the well-educated people in England, is actually spoken precisely like **w**; the word **when** not differing at all from **wen**. Now, the customary **w** of the English language begins with a brief sound of o͝o (fo͝ot); — this is the main part of the difference between an English and a German **w**. A proper **h** sound prefixed to this produces the sound represented by **wh** in **when**, etc., as commonly heard in America, and as pronounced by some, if not by most, of the well-educated people in England, when they speak in what they themselves regard as the correct way. The word **wen**, with an **h** sound prefixed, gives us **when**. The word **who**, with the vowel struck very lightly and followed by a long **i**, makes the word **why**.

It is, indeed, not difficult to utter the surd, or nonvocal, correlative of the sonant **w**, and to pronounce the word **when** with such a sound prefixed to the vowel. This will give to the vowel the same abrupt beginning it has in **hem**. In this way, the vocality comes in not till the vowel is struck. The other theory brings in the vocality, or sonant quality, before the vowel is reached. This is the essential point of difference between the two conflicting views.

§ 213. The **kw** sound in **quite, quality**, etc., and the **tw** in **twine**, etc., are compound and momentary sounds, analogous to the **wh** as above; the case is the same even with the **gw** sound in **guano**.

NOTE. All the instances here adduced were referred to, in a previous paragraph (19 *b*), as containing an impure vowel diphthong made by the **w** sound as a connecting glide. This view may be taken with some advantage. Yet, since the preceding mute, **t** or **k**, as in **twine, quite**, or the aspirate **h**, as in **when**, can not be prolonged, as can the **s** in **swim**, but combines with the **w** in an abrupt momentary sound, it is more exact to treat the **w** in these cases as part of a compound consonant.

§ 214. (4.) In regard to the initial sound in **hue, humid, huge**, etc., there is the same difference of opinion as in the case above noted of the **wh**, some regarding it as the surd correlative of the sonant **y**, and others, as an **h** sound preceding the **y** part of the vowel.

The consonant **y** always begins with a brief vowel sound (§§ 205, 272), — which, in the **y** part of the vowel **ū** (**ūse**), is the high-mixed (§ 16 *b*) vowel element nearly related to **ĭ** (**ĭll**). An **h** sound preceding and combined with this **y** makes the compound and momentary consonant which, in **hue**, etc., is followed by the vowel o͝o (fo͝od) or o͝o (fo͝ot).

What would otherwise be regarded as part of the impure diphthong **ū** (**ūse**, § 19 *b*) is here viewed as detached from the vowel and combined with the preceding **h** in a compound consonant; just as was done in the case of **wh** (§ 212); as explained in the Note after § 213.

§ 215. (5.) The **mp** in **jump, presumption**, etc., with the **mpt** in **exempt**, etc, the **nt** in **sent**, the **nd** in **hand**, etc., the **nk** in **ink**, etc., the **ng** in **sing**, etc., and the **nch** in **bench, inch, lunch**, etc., are peculiar compounds.

In the **mp** in **jump**, etc., the nasality sets in, — by depression of the soft palate, — while the lips are approaching for closure, and continues till they close; and thus gives the impression of an **m**. The lip closure is abrupt and forcible, and made with the percussive, occlusive, and implosive action before described (§ 189); and thus gives the effect of a **p**, even without the help of the breath explosion (§ 191), which will ordinarily be added at the close. In a word like **exempt**, we have the first part of a **p**, given as above described, and the last part of a **t**, thus the total combination **mpt** will not be simply **m** followed by **t**. These compounds are momentary consonant sounds; while **m** by itself is a continuous consonant, and may actually be prolonged for emphasis, — as, for instance, in **lame**, — this cannot properly be done with the **m** in **lamp, jump**, etc. The **m**, in such cases, represents merely the glide (§ 161) from the vowel to the position for an **m**.

§ 216. The compounds **nt** in **sc**nt, etc., and **nk** in **ink**, etc., are to be explained in a similar manner. So also is the **nch** (**ntsh**, § 210), in **bench**, etc Somewhat of a similar character appertains to the **nd** in **hand**, etc., also to the **ng** at the end of a word, as in **sing**, etc. (§ 246) The pronunciation of **bench, inch**, etc., is not properly represented in the way in which it is done by Walker and others, as **bensh, insh**, etc.

§ 217. (6.) In **x** (**ks**), as in **box**, etc., an abrupt **s** sound trenches upon the simple breath explosion of the surd mute **k**, and the compound is momentary. The same is to be said of **ps** and **ts**, as in **cups, its**, etc, and of **nx** in **anxious**, etc. In **mps, nts** (**jumps, cents**), the **s** is in the same way combined with the compounds explained above.

§ 218. There is a difference between **cents** and **sense**, although in the abrupt transition from the **n** to the breath sound of the **s**, it is not easy to avoid entirely an explosive sound like the vanish of a **t**. But in **cents** the **t** is distinctly given, while the **n** is more fully brought out in **sense**, and the **s** is not so abrupt. Also, **handsome** may be made to differ slightly from **hansom**.

§ 219 DOUBLE CONSONANTS. All of the diphthongal consonants, as above, have two or more components closely blended, of which one, as a separate element, would be momentary, and at least one other would be continuous, and the compound product becomes a momentary sound. The case thus differs from that of a mere junction of two or more consonants under one stress impulse, as simply successive one to the other, — such as we have in **play, sky, hold, harm, glow, strive, cast, canst**, etc.; all which are double, or triple, but not diphthongal.

THE CONSONANTS OF THE ALPHABET (WITH THE CONSONANT DIGRAPHS) IN DETAIL.

B.

§ 220. **This is a labial sonant mute (§§ 178, 195), as in boy, cab, ebb, rob'ber, beau'ty, bring, blow, a'ble, herb, bulb, rhomb, robbed** (rŏbd), **robs, cup'bear'er**, etc. It is usually silent after **m** in the same syllable; as in **bomb, climb, tomb**; also before **t**; as in **debt, doubt, sub'tle**; also in **bdel'lium.**

C.

Of this letter, there are two kinds of sound: —

§ 221. (1.) The so-called "soft **c**" has a sibilant sound (§ 203) of three varieties: — (*a*) One like **s** sharp (§ 256), marked **ç**, **ç**, and represented by **s** in the respelling for pronunciation; this sound is taken before **e, i**, or **y**, as in **cede, civil, cypress, acid, glance, force, vice**, etc. — (*b*) In a few words the letter has the **z** sound; as in **sacrifice, suffice, discern.** — (*c*) When **ce** or **ci** is followed by another vowel in the same syllable, the **sh** sound is taken, either by the **c** alone, — as in **oceanic, viciosity**, — or by the **ce** or **ci** together, — as in **ocean, vicious**, etc. (§§ 97, 106, 261).

§ 222. (2.) The so-called "hard **c**," marked **ć**, **c**, has the sound of **k**, and is represented by **k** in the respelling. This sound is taken before **a, o**, or **u**, or a consonant, and at the end of a syllable if not followed by **i** or **e**; as in **call, cave, cold, pic'ture, act, ethics, ac'rid, cry, clay, arc, talc, sanc'tion, disc, almanac, scan, ac'cord, vac'çi-nate**; and before **e** in **sceptic**, and before **i** in **scirrous**, etc. — See § 232.

§ 223. **C** is silent in **czar, victuals, indict**, and in **muscle, corpuscle**, etc.

CH.

This digraph has three sounds, as follows: —

§ 224. (1.) The more frequent sound is diphthongal, and is approximately described as **tsh** (§ 210); as in **chin, child, choose, church, much, beech, arch**, etc.; the digraph with this sound has sometimes for an equivalent the trigraph **tch** at the end of a syllable; as in **hatch, watch, fetch, ditch, scotch, satch'el**; and is the same as the German **tsch**, as in **Deutsch**. It takes a **j** sound in **spinach.**

§ 225. The sound is otherwise represented by **ti** in **bastion, question, Christian, digestion**, etc., by **te** in **righteous**, and by **t** with a part of **u** in **tex'ture, na'ture**, etc. — See §§ 97, 106, 135.

§ 226. (2.) Marked ç͟h, ç͟h, and with sound like **sh**; in words from the French which have retained this sound; — usually initial; as in **chaise, chivalry** (see § 277), **chagrin, machine**; final in **mustache, barouche.** — See § 261.

§ 227. (3.) Ch hard, marked c͟h, **ch**; with sound like **k**; which is used to represent it in the respelling. It has this sound in words derived from the Greek, and through the Latin in all but quite modern words; as in **chorus, epoch, echo, chlorine, chrism, character**; or from the Hebrew; as in **Nebuchadnezzar, Enoch,** etc.; exceptions are **church, chart, Rachel, cherub,** and the prefix **arch-** in **archbishop, archdeacon, archduke,** etc.; but the **k** sound remains in **archangel,** and in **architect, architrave,** etc.

§ 228. **Ch** is silent in **drachm, schism, yacht**; also in **fuchsia.**

D.

§ 229. This is the dental, or hard-palatal, sonant mute (§§ 178, 195); as in **day, dry, dwell, bed, old, hard, aimed, end, idle, maiden, hugged, enraged, lived, amazed, rugged, naked, assuredly, fixedness, sends** (s final as z), **send'st** (s sharp). It sounds as **t** when preceded by a surd in the same syllable; as in **hissed, looked, arched** (hĭst, lo͝okt, ärcht); — see § 172. It is silent in the first syllable of **Wednesday** and in **handkerchief, handsome,** and **windrow**; but see §§ 216, 218, 277.

F.

§ 230. This is a labiodental, and sometimes a purely labial, consonant (§ 178); a surd fricative (§ 198), giving a simple breath sound (§ 153); as in **fame, fly, free, few, cuff, staff, oft,** etc. It has **gh** and **ph** for equivalents; as in **laugh, photograph,** etc. (§§ 236, 248). It takes the sound of **v** in the word **of,** and usually in the compounds, **hereof, thereof, whereof.**

G.

This letter has three sounds, as follows: —

§ 231. (1.) The hard **g**, marked G̈, g̈, but in the respelling for pronunciation represented by **g** unmarked; the guttural sonant mute (§§ 178, 195); made by injecting vocalized breath into the pharyngeal cavity, which is closed by the soft palate so arched as to bring the lower border into contact with the tongue, while on the curve it is pressed back against the wall of the pharynx; — used before **a, o, u,** or **l, r, s,** in the same syllable; as in **gay, go, gun, glad, grow, lingual, gewgaw, argue, bags, haggle**; — sometimes, though not usually, before **e, i,** or **y**; as in **get, give, gig, muggy**; — the **g** is always hard at the end of a word; as in **hug, hag, egg, berg**; also in the derivatives of such words, even when the doubled **g** is followed by **e, i,** or **y**; as in **cragged, druggist, foggy**; — usually hard at the end of a syllable; exceptions such as **mag'ic, reg'is-ter, log'ic, exag'ger-ate,** are due to the **e** or **i** in the following syllable. The letter occurs in the digraph **ng** (§ 246) at the end of syllables. The sound is heard in **x** when that is equivalent to **gz**, as in **exist, example,** etc. (§ 271). It is represented by **gu,** as in **guard, guest,** etc, by **gh,** as in **ghost, ghastly,** etc.; and by **gue,** as in **plague, catalogue,** etc.

§ 232. The interposition of a slight sound of **ē** (ēve) or **ĭ(ĭll)** between **g** hard and a following **ĕ** or **ĭ** sound, in **garden, guard, guide, guile,** etc., and in like manner after a **k** or hard **c,** in **card, kind,** etc, — upheld by the authority of Walker, — is not generally approved, though customary in some localities in the United States.

§ 233. (2.) The soft **g**, marked Ġ, ġ, with sound like **j** (§ 239), and represented by **j** in the respelling for pronunciation; a compound, or diphthongal, consonant (§ 211); as in **gem, engine, rage, caged, large, bilge, exag'gerate, mag'ic, change, gin'ger, stin'gy,** etc.; usually before **e, i,** or **y,** but before **a** in **gaol.** It has **dg** or **dge** for an equivalent, at the end of a syllable only; as in **badg'er, badge, edge, judge, midg'et,** etc.

§ 234. (3.) In a few words from the French, **g** retains the sound like that of **z** in **azure** (§ 199); as in **rouge, mirage, cortége,** etc.

§ 235. The **g** is silent before **m** or **n** final, and when initial before **n**; as in **phlegm, sign, gnat, gnostic,** etc. No **g** sound is heard in the digraph **ng**; as in **sing, long,** etc. (§ 246), nor in **seraglio,** nor in **bagnio.**

GH.

§ 236. At the beginning of a word, this digraph is sounded like hard **g**; as in **ghastly, ghost,** etc. It is silent after **i**; as in **high, sigh, weigh, straight, eight, right,** etc.; also before **t** in the same or a following syllable, as in **bought, brought, thought, wrought, caught, taught, fraught, daughter, drought,** etc.; but has the sound of **f** in the word **draught**, the sound of **f** also commonly after **au** or **ou** at the end of a syllable, as in **laugh, cough, rough, enough**; but that of **k** in **hough, lough, shough**; and is often silent in syllables after **au** or **ou**; as in **overslaugh, usquebaugh, dough, doughy, though, bough, plough, through.**

H

§ 237. This is essentially a momentary sound; its nature and mode of formation have been already described (§§ 181–183), often called the *aspirate.* It occurs at the beginning of words, as in **hate, here, hire, house, home, hard, hit, hoop, hoot,** etc.; and is heard at the end in **ah** and **oh,** as they are sometimes uttered. It is represented by **wh** in **who, whose, whom,** and in **whole, whore, whoop,** and is a component of the diphthongal **wh** in **when, which,** etc., and in **whale, white,** etc. (§ 212), and of the diphthongal consonant in **hue,** etc. (§ 214).

§ 238. The letter is silent in **heir, herb** (usually), **honest, honor, hour** (§ 277), and their derivatives; silent, more or less frequently, in **hostler, humor, humable,** and their derivatives, with some others, also silent, or else not sounded as **h**, in the trigraph **tch** and the digraphs **ch** (§§ 224–228), **gh** (§ 236), **ph** (§ 248), **rh** (§ 251), **sh** (§ 261), **th** (§§ 263, 264), and in **phthisic,** and in **khan,** and in **John.**

J.

§ 239. This, with the equivalents **g** soft and **dg,** has already been described (§ 211) as a diphthongal consonant compounded of **d** and **zh.** We have it in **jar, jam, jade, jest, jut, jute, jury, injure, join,** etc. The sound is usually represented by **g** (soft) or **ge** or **dg** at the end of a syllable; as in **page, vengeance, sur'geon, mag'ic, badg'er, judge,** etc., with **proj'u-dice, proj'ect, maj'es-ty, caj'e-put,** as exceptions; — see § 233. In some proper names of foreign origin, however, and in other foreign words, **j** or **dj** occurs at the end of a syllable; as in **Aj'a-lon, hadj, hadj'i, Mij'a-min, Raj, Raj'poor', Raj'poot', Raj'poo-ta'na.**

The sound is, or may be, represented by **ge** in **surgeon, outrageous,** etc.; by **gi** in **region, religious,** etc.; by **di** in **soldier,** etc.; by **de** in **grandeur,** etc.; and by **d** with a part of **u** in **verdure, produce** (*n.*), etc. — See §§ 97, 106, 135.

In the three last-mentioned cases, the pronunciation may be such that the **zh** part of the sound will be no more than a weak glide between the **d** and the following vowel: the greater relative prominence may be given sometimes to the initial component **d** and sometimes to the terminal **zh**; and in this class of words the **y** sound may even be held without giving way to the **zh,** the **d** remaining unchanged.

K.

§ 240. This is the guttural surd mute (§§ 178, 185); as in **kite, kill, skill, ask, ark, elk, milk, ink, oak,** etc. It agrees with the sonant **g** (see § 231) and the nasal **ng** (§ 246), as involving closure of the soft palate upon the back tongue at the same place; — see § 179. It has hard **c,** hard **ch, gh, cu, qu, que, cque,** and **q** for equivalents; as in **call, hough, biscuit** (-kĭt), **choir, coquet, antique, sacque, queen.** The sound is the first component of the ordinary **x**; as in **box,** etc. Before **n,** in the same syllable, **k** is silent; as in **knot, knee,** etc.; **ck** has the sound of **k** alone; as in **back**; as does **lk** after **a** (all) or **ō** (ōld); as in **walk, folk,** etc.

For an objectionable pronunciation, as in **sky, kind, card,** etc., see § 232.

L.

§ 241. This is a palatal sonant fricative consonant (§§ 178, 199), made by contact of the point of the tongue with the palate, as for **t, d, n**; but with the sides of the tongue in this case left free for the passage of the breath. It is one of the liquids (§ 206). We have it in **lie, low, ill, all, sole, blow, clay, fly, glow, play, slay, alb, hold, elf, elk, elm, help, else, halls, halt,** etc. For the explosive **l** in **battle, bustle, bridle, couple, pickle,** etc, see §§ 158, 194. In these, and in some other cases, as in **evil, easel,** etc., the **l** in an unaccented following an accented syllable fulfills the office of a vowel, — see § 95 The **l** is silent in **would, could, should, alms, balm, malmsey, calm, palm, palmer, psalm, salmon, almond, half, behalf, calf, halve, salve, calves, balk, chalk, calk, talk, stalk, walk, folk, yolk** (often), with like words and their derivatives.

M.

§ 242. This is the labionasal consonant (§§ 178, 207); as in **me, may, tame, him, times** (tīmz, § 172), **named, lamp** (§ 215), **lamps** (§ 217), **smile, palm, drachm, paradigm,** etc. A **b** after **m** in the same syllable is usually silent; as in **climb,** etc.; an **n** after **m** at the end of a syllable is always silent, as in **hymn, column,** etc; at the beginning, the **m** before **n** is silent, as in **mnemonics.** The **m** serves as a vowel in **schism,** etc. (§ 194).

N.

§ 243. This is the dentonasal, or linguanasal, consonant (§§ 178, 207); the oral passage being closed by contact of the point and the sides of the tongue with the palate, just as it is for **t** and **d**, the **n** is continuous and nasal, while **t** and **d** are momentary and oral. We have it in **none, inn, one, ten, fern, snow, tent, annul, change, ingress, congressive,** etc. In **even, eaten, maiden,** etc, it serves as a vowel; — see § 95.

§ 244. When **n** is final after **m** it is always silent, as in **hymn, condemn, solemn,** etc.; but when to such words is added a suffix or an inflection beginning with a vowel, the **n** is generally sounded (see exception below), as in **condemnation, condemnatory, solemnize, solemnity, hymnology, hymnist, limner, autumnal,** etc. So **n** is silent in **kiln, limekiln,** etc. In the participles **damned, damning, condemning, contemning, hymning, limning,** etc, and also in the cognate nouns **condemner** and **contemner,** usage is divided. (See the Dictionary on these words.) Initial **kn, pn, mn,** are sounded as **n**; as in **know, pneumatics, mnemonics,** etc.

§ 245. Neither the sound of **n** nor of **g** is heard in the digraph **ng** (§ 246). But the **n** at the close of an accented syllable, with a **g, c,** or **ch,** hard, or a **k** or **qu,** commencing a following syllable, commonly takes the **ng** sound, and is marked **n̨,** as in **an̨'ger, un̨'cle, din̨'gle, an̨'chor, con̨'gress, con̨'gre-ga'tion, can̨'ker, con̨'quest, con̨'quer,** etc, but not generally (see below) if the accent falls on the latter syllable; as in **con-gres'sive, con-cor'dant,** etc, not in the prefixes **in-, en-, on-, un-, non-**; as, **in'come, un'con-cern', non'com-mit'tal,** not in **quin'cunx,** and the derivatives and compounds of **quin'que**; and not in **pen'guin** and a few other words. In **e'lon-ga'tion, pro'lon-ga'tion, san-guif'er-ous,** etc., and often in **con-gres'sion-al, con-gru'i-ty,** and like words, the **n,** though unaccented, retains the sound of **ng,** which is given it by rule in the words from which these are derived, as **e-lon'gate,** etc. It takes the **ng** sound also, before **k,** or **ch** hard, or **x,** at the end of a syllable; as in **ink, think, thank, monk, conch, anx'ious,** etc., making with it a diphthongal and momentary consonant (§ 216).

NG.

§ 246. This digraph represents a simple sound, namely, that of the gutturonasal consonant, which is made, like the surd **k** and the oral sonant hard **g**, by contact between the soft palate and the back tongue, but, unlike them, with a free passage between the soft palate and the pharyngeal wall; — see §§ 167, 207. It occurs only at the end of syllables; as in **long, wing, hang, sing, song'stress**: or with **ue** added at the end; as in **tongue**. An added inflection causes no change; as in **sing'er, wing'ed**, etc.; except that in the comparatives and superlatives of **long, young**, etc., the **g** goes with a proper hard **g** sound to the inflection, while the **n** takes to itself the **ng** sound, as, **lon'ger, lon'gest**.

The **ng** at the end of a word is really diphthongal and momentary; as in **long**, etc. (§ 216); the sound is thus abrupt, and does not admit of prolongation; it stops suddenly with the organs in position for a nonnasal hard **g** sound. But when another syllable is added, it does not take this abrupt character, and can be prolonged for emphasis or any other purpose; as in **lon'ger, fin'ger, sin'gle**, etc.

It is a common fault in some quarters, and on the part of some people, to give the **n** instead of the **ng** sound, in the inflection of the present participle; as, **livin', bringin'**, instead of **living, bringing**. In words like **sicken, quicken**, the **n** sound preceded by **k**, if the **ng** sound be substituted for the **n**, the mispronunciation will ordinarily fail to be noticed by even the most careful observers.

P.

§ 247. This is the labial surd mute (§ 185); as in **pea, pay, cup, cape, pray, play, harp, help, spy, spread, oppress, upper, happy**, etc. It is silent as initial before **n, s, sh**, and **t**, as in **pneumatics, psalm, pshaw, ptarmigan**; also in **raspberry, receipt, sempstress, accompt, corps**, and their derivatives. For the diphthongal **mp** in **lamp**, etc., **mpt** and **mpts** in **tempt, tempts**, etc., see §§ 215, 217.

PH.

§ 248. This digraph occurs chiefly in words of Greek derivation, and has usually the sound of **f**; as in **phantom, sylph, philosophy**, etc. It has the sound of **v** in **Stephen**; and, according to most orthoepists, in **nephew**, though in America it has commonly its regular sound of **f** in the latter word. In **diphthong, triphthong, ophthalmy, naphtha**, and other allied words, and their derivatives, the **ph** is sometimes sounded as **p**.

Q.

§ 249. **Q** is in all cases followed by **u**, and the two together have commonly the sound of **kw** (§ 213), as in **queen, conquest**, etc.; but have that of **k** in a few words from the French, as in **coquette**, etc., as has also the ending **que** in **antique, burlesque**, etc.

R.

§ 250. The **r**, when pronounced as an actual consonant, is a sonant fricative element, and belongs to the palatal, or else to what is called the dental, class of consonants (§ 178). Its several varieties all bear a close relation to vowels of the mixed order (§ 16), namely, **ŭ** (**ŭp**), **û** (**ûrn**), **ĕ** (**fĕrn, evĕr**), and a glide of this kind naturally intervenes between a vowel not of this class and a following **r**. These vowels are made with an approximately cylindrical passage between tongue and palate: taking this position, and simply raising the point of the tongue, for friction of the breath against the edge, gives by this means the **r** sound, while raising the point of the tongue still higher and into contact with the palate gives the position for the nasal **n**, and for the surd and sonant mutes, **t** and **d**. In the words **ûrn, fĕrn, bûrn, hûrt, bird**, etc., we have actually these three positions in succession, in just this order, and, by interposing an **s** on the way, we get after the vowel the triple consonant **rst**, as in **first, bûrst**. — See § 140.

There are two leading varieties of the consonant **r** to be noticed, — besides also the vowelized **r**, as a third variety, which is not really a consonant, and besides a substitute that is sometimes used, made by a trill (§ 166) of the uvula, or of the epiglottis. Reference will here be had, when not otherwise stated, to the pronunciation of those who speak the **r** always as a consonant.

§ 251. (1.) The so-called dental (§ 178) **r**, having the same place of articulation as **s, z, t, d**, and **n**, — that is, between the point of the tongue and the hard palate not far back from the front teeth, — is employed before a vowel; as in **rise, try, oral, array**. It is so used by those who do, and by those who do not, employ the vowelized **r** in other situations. The dental variety is also favored, rather than the palatal, by conjunction with front vowels (§ 10), and with labial or dental consonants (§ 178); as in **fear, fern, preach, trace, bring, harp, hurt**, etc. It is usually trilled (§ 166) somewhat, but not strongly so.

The **rh** in **rhetoric, rheum, myrrh**, etc., is sounded simply as **r**.

§ 252. (2.) The palatal **r**, made between the point of the tongue and the palate at a place near the junction of the hard palate with the soft palate, is the **r** that naturally goes before or after the vowel **ä** (**ärm**) or any of the back vowels (§ 11), and before or after a guttural consonant; as in **ärm, ûrn, wạr, rạw, rōar, cry, grow**, etc. In some parts of the United States, the point of the tongue is curled back, in such a way as to bring the **r** under the class of elements sometimes called "cerebrals." The palatal **r** is less apt to be trilled than the dental **r**.

Note. — When an **r** comes between a vowel and a consonant, or between two different vowels, one favoring the palatal and the other the dental variety, no general rule can be laid down determining which shall prevail; but the one that precedes has rather the advantage over the other.

§ 253. (3.) The vowel-like, or vowelized, **r**, which prevails at present in London and the South of England, is employed in all situations, except when a vowel sound immediately succeeds either in the same or in a following word, — in which case some form of the **r** as an actual consonant sound is given. The vowelized **r** is heard either as a vowel of the mixed order (§ 16), **ĕ** (**fĕrn, evĕr**), **û** (**ûrn**), **ŭ** (**ŭp**), or as a mere prolongation of the vowel preceding; as in **war, far, more, here, where, care, carve, cart, heard, harp, hard, worm, warn, worn, farm, farther, turn, fern, western**, etc.

In New England, a usage has prevailed, not approved or much used by well-educated people, which simply dropped, or elided, the **r** in the situations above noted, not giving it representation in sound at all. But the **r** takes generally, in the United States, a more or less clear sound as a consonant in all situations.

Note. — According to Mr. A. J. Ellis, it is permissible, even in London, to sound the **r** as a smooth consonant in all cases in which it commonly takes the vowelized form. There would, therefore, seem to be no good reason for not doing so, and thereby avoiding the multiplication of what are really local, if not provincial, homonyms and the liability to ambiguity and mistake arising from the factitious similarity in sound of **western** and **Weston**; **manner** and **manna**; **fern** and **fun**; **birds, bards**, and **buds**; **sore** and **saw**; **lore, lower**, and **law**, and the like in other instances. Besides this objection, there is the naturally resulting habit of adding a consonant **r** to words ending in **a** when the following word begins with a vowel; as **Minerva(r) is . . , the idea(r) of**, etc.

§ 254. In the case of words in which **r** occurs between two vowels of which the first is long and accented, such as **he'ro, se'rious, wir'y, de-sir'ous**, there is a style of pronunciation prevalent in England, but not much in vogue in America, which doubles the **r**, making it smooth or else merely vowelized at the end of the first syllable, and rough and trilled at the beginning of the second; as **hē(r)'ro, sē(r)'rious**, etc. In America, it is more frequently used in words formed with an inflection or suffix after the **r** than in other cases; as in **se-cūr'(r)ing, poor'(r)er**, etc.

S.

§ 255. This letter has four different sounds, all of them sibilant (§ 203), two surd and two sonant (§§ 169, 179), as follows: —

§ 256. (1.) The proper sound of **s** as a surd sibilant (§ 203), is made by breath forced through a contracted channel between the tongue and the hard palate near the front teeth, and impinging upon the edges of the upper or the lower teeth; as in **see, so, hiss, yes, scorn, sky, sly, smile, snow, spy, square, stay, swim, cuffs, picks, cups, cuts, sense, curse, best, message, display, lisp, gipsy, absurd, morsel, absolve, basis, nuisance, practise, false**, etc. The point of the tongue may be raised to the upper gums, or it may be depressed behind the lower teeth, making the contracted channel not so near the point of the tongue. Equivalents are — **c** soft, as in **cell, civil, vice, sc**, as in **scene, science**, etc.; **sch**, as in **schism, schedule** (as some in England pronounce; § 277), **ps**, as in **psalm, psychology**, etc.

§ 257. (2.) The sonant **s** (§§ 199, 202), — marked **ṡ**, — corresponding to the surd, as above, is made by the same articulative position, except that the tongue is pressed somewhat closer to the palate. The sound is precisely like that of **z**; as in **iṡ, haṡ, ribṡ, ridėṡ, eggṡ, illṡ, aimṡ, runṡ, liveṡ, cạṡy, palṡy, pạnṡy, damṡel, observe, pleaṡant, accuṡe, poṡition, diṡmal, diṡeaṡe, huṡband, griṡly, reṡolve, preṡide**, etc. The **s** is sonant as the final sound of some verbs and surd as the final sound of the cognate nouns or adjectives, as **uṡe, abuṡe, diffuṡe, riṡe** [*n.* & *v.* often alike sonant], **houṡe**, etc. Notice **cloṡe**, with **s** as **z** in verb and noun, and **s** sharp in the adjective. Compare **advise** (*v.*), **advice** (*n.*), etc.

§ 258. There is a diversity of opinion among orthoepists as to whether the **z** or the sharp **s** sound should be employed in some of the words formed with the prefix **dis-** (Walker, etc., favoring **dĭz-**, late orthoepists, **dis-**), as **disarm, disburse**, etc.; also in the case of the termination **-ese** of gentile nouns; as in **Chinese, Japanese**, etc.

§ 259. (3.) **S** takes sometimes the sound of **sh** (§ 203), by fusion with a following **y** sound (§ 272), with consequent vowel change, as in **version, mansion, convulsion, censure, sensual, sure, sugar**, etc.; in the case of **s** doubled, the first is assimilated to the second, as in **passion** (păsh'ŭn), **issue** (ĭsh'ū). In a few words **s** takes the **sh** sound while leaving the following vowel unchanged; as in **Asiatic, nausea**, etc. — See §§ 97, 106, 135, 221.

§ 260. (4.) **S** takes the sound (**zh**) of **z** in **azure** (§ 274), by fusion with a following **y** sound, when it is preceded by a vowel in an accented syllable, as in **vi'sion, deci'sion, ad-he'sion, sua'sion, ex-plo'sion, con-fu'sion, pleaṡ'ure, lei'ṡure, viṡ'u-al, u'ṡu-ry**, etc.; also in **ṡcig'sion, ab-ṡcig'ṡion, re-ṡcig'sion**.

SH.

§ 261. This digraph, — as in **sharp, shine, rash, usher**, — represents a surd sibilant (§ 203) made between tongue and palate at a place farther back than the **s**. It is commonly reckoned as a simple element. But the description by Brücke seems more accurate, which makes it to be a composite element, consisting of an **s** sound made at the point or front edge of the tongue and, as simultaneous therewith, a breath sound made farther back, and like the German **ch** in **ich**. The **s** part of the articulation must, however, be more open than for an ordinary **s**. The **sh** in English takes also more commonly a slightly diphthongal character, with the **s** constituent more prominent in the initial and the simple breath sound in the terminal portion.

The sound is otherwise represented by **c** or **s** with or before **e** or **i**, and by **t** or **sc** with or before **i** (§§ 97, 106); by **s**, sometimes, before **u** (§§ 134, 135, 259); as involved in the **x** in **anxious, luxury**, etc.; by **ch** in **chaise**, etc.; by **chs** in **fuchsia**; and by **sch** in **schorl, schottische**, from the German.

T.

§ 262. This is the dental surd mute (§§ 178, 185); as in **tie, it, note, try, tune, twine, stay, stray, art, last, apt, sent, aft, act, salt, next, attend**, etc. For the sound of **t** in different situations, see Surd Mutes, §§ 185-194. For **ti** sounded as **sh** in **nation**, etc., and as **ch** in **question**, see § 106.

The sound is represented by **bt, ct, th, cht, ght, phth**; as in **doubt, indict, thyme, yacht, night, phthisic**, etc., also by the verb inflection **-ed** after surd elements other than **t** (§§ 96, 229). The **t** is silent in **Matthew, mortgage, hautboy, chasten, hasten, often, listen**, etc.; but in **chasten**, etc., it causes an abrupt beginning of the **n** (§ 158).

TH.

§ 263. This digraph is used to represent two lingua-dental fricative sounds (§§ 178, 179, 198, 199): a surd and a sonant; both made with the same articulative position: — the surd, as in **thin, thing, thrive, enthusiasm, breath, length, birth, width,** etc.; the sonant, marked Th, th, as in **the, this, thy, then, with, breathe, bathe, father, northern,** etc.

§ 264. In the following nouns, as exceptional cases, the th is surd in the singular and sonant in the plural: — **bath, cloth, lath, mouth, oath, path, wreath, moth**, *pl.* **baths, cloths,** etc. Verb and noun forms differ: — the verb sonant, the noun surd, as, **breathe, breath; wreathe, wreath; bathe, bath; mouth, mouth.**

Th has the sound of t in thyme, Thomas, Thames, Esther; and, with ph, in phthisic; it is commonly silent in isthmus and asthma.

V.

§ 265. This is a labio-dental fricative element (§§ 178, 199), the sonant correlative of the surd **f**; as in **vain, vivid, ever, live, lived, move, moves, calveg, wolveg,** etc. The sound is taken by **f** in **of** (§ 230), but in pronouncing its compounds, **hereof,** etc., usage is divided between **v** and **f.**

The sound can well enough be produced by the lips alone, and is quite commonly given in this way by Germans, as it is so in their language, represented by **w.**

W.

§ 266. This is a labial sonant fricative (§§ 178, 199); as in **we, wet, worse, inward, dwarf, twelve, twin, swan, thwart,** etc. When not silent, **w** is always followed by a vowel in the same syllable It is sometimes represented by **u** before another vowel: as in **quail, query, acquire, language, persuade,** etc. Preceded by **s,** the **w** may be regarded as forming, in conjunction with the following vowel, an impure diphthong (§ 19 *b*), as in **swan, persuade**, but, preceded by a **t, d, k,** or hard **g** or an **h** sound, it forms, in conjunction with the consonant, a compound, or diphthongal, element (§§ 212, 213)

§ 267. **W** is called a semivowel (§ 205) from its close relation to the vowel o͞o (**fo͞od,** § 126) or o͝o (**fo͝ot,** § 128). It always actually begins with a brief o͞o or o͝o sound The position of the organs is the same for both the vowel and the consonant, the tense condition for the vowel making the chief difference, — as may be tested in the words **woo, woe, war.** As for o͞o or o͝o, so for **w,** there is not only a contraction of the lips, but there is also a constriction between the back tongue and the soft palate, which is as essential for the consonant as it is for the vowel So that **w** is a guttural as well as a labial consonant In this respect, as well as in the brief vowel initial, it differs from the English **v** and from the German **w** It also differs from them and agrees with the vowel o͞o or o͝o, in being made with some protrusion of the lips; so that the vocal current is driven through a short tube, instead of impinging upon sharp edges.

§ 268. After a vowel in the same syllable, the **w** as a consonant is silent, but, after long **o** as in **glow, thrown,** it may be regarded as in some sort representative of the vanish of that vowel (§ 109) In some cases **t** has more significance, as in **awe, law** (§ 70); the digraph **ew** is the equivalent of long **u** (§ 131); as in **dew, few,** etc.; and **ow,** of **ou**, as in **cow, town** (§ 129) **W** is silent before **r** in the same syllable; as in **wring, wrote,** etc.; also in **answer, sword, toward, two,** and in **who, whom, whoop,** etc. For the diphthongal consonant **wh** in **when,** etc., see § 212.

X.

§ 269. This letter has two sounds: a surd (**ks**) and a sonant (**gz**).

§ 270. (1.) The surd, — as in **box, wax, execute, exit, exodus, exudation, exclaim, extreme, excel, excellent, exhibition, exhortation,** etc., — is to be regarded as a diphthongal consonant; — see § 217. **X,** as preceding an accented syllable (§ 271), is exceptionally surd (**ks**) in **al'lox-an'ic, aux-et'ic, ax-il'la, ax-in'o-man-cy, ex-ar'chate, ex-er'cent, ex-ude', hex-am'e-ter, ox-al'ic,** and a few other words. In words such as **anxious, noxious, luxury,** the **s** component of the **x** becomes **sh** by fusion with a following **y** sound. — See §§ 106, 135, 259.

§ 271. (2.) **X** is, with few exceptions (§ 270), sonant (**gz**) when followed by an accented syllable that begins with a vowel, or by a silent **h** and a vowel under the accent; as in **exist, exalt, exaggerate, example, exempt, exert, exotic, exult, exhaust, exhibit, exhort, exhilarate,** etc, and the derivatives of such words often retain the sound with the **x** falling under the accent; as in **ex'em-pla-ry, ex'emp-ti'tious,** etc.

At the beginning of words, **x** has the sound of **z**, as in **xanthic, xebec, xylography.** It retains this sound in certain compounds, as in **par'a-xan'thin, met'a-xy'lene,** etc.

Y.

§ 272. **Y,** as a consonant, is a palatal sonant fricative element (§§ 179, 199), as in **year, you, young, beyond, vineyard, halyard,** etc It is classed with **w** as a semivowel (§ 205). The letter **y** originally represented a vowel sound of the mixed order, and nearly related to ē (ēve) or **I (III)**; it had this sound in the Anglo-Saxon. As commonly and properly pronounced in modern English, it begins with a brief sound of one or the other of these vowels It is an uncouth style of utterance that omits this initial sound. In many words this consonant is descended from an Anglo-Saxon **g** hard, in others, from a vowel In certain cases the sound is represented by an **i** from which it has been developed, as in **poniard, onion, genial, familiar,** etc (§ 106), and in like manner by **e** (§ 97); and it forms a part of the vowel ū (ūse), — see § 19 *b* The place of articulation for this consonant extends further back than does the place of constriction for the vowel ē (ēve), involving the soft palate, as the place for ē does not.

Y, as a consonant, occurs only at the beginning of a syllable: at the end or in the middle, it is a vowel, as in **my, happy, eye.** It is used in this Dictionary in giving the pronunciation of some foreign words, as **fiord, lorgnette, camarilla,** etc., and, in such case, is not restricted to the beginning of a syllable.

Z.

§ 273. The ordinary **z** is a sonant fricative (§ 199), and is ranked as a sibilant (§§ 202, 203); as in **zeal, zone, maze, size, amazed, frozen, hazy, dizzy, sizar, buzz,** etc., the sound is often represented by **s**, as in **easy, his, ears,** etc. (§ 257); sometimes by **c**; as in **suffice,** etc. (§ 221) It is the sonant correlative of the surd **s** (§ 256) The sound is not compound, except that, when final in a syllable and not followed immediately by a vowel or other sonant element, it takes a vanish of a surd **s** sound

§ 274 In some words, **z** takes a sound (**zh**) which is the sonant correlative of the surd **sh**; as in **azure, seizure, grazier**, developed by fusion of a proper **z** with a following **y** sound (§§ 106, 135, cf § 260) The sound is represented by **si** in **fusion,** etc, by **ti**, exceptionally, in **transition** (cf **insition,** § 277), and by **g** in **rouge, manége, mirage,** and other words from the French.

§ 275. SYLLABICATION.

(**A.**) A SYLLABLE — in the etymological signification of the word, a *holding together* — consists usually of two or more speech elements following in succession and combined together into a unity made by the singleness of the impulse exerted in their utterance. The singleness of the impulse being the essential thing, one element alone, such as can be sounded by itself, will suffice, as, **I, eye, ah, oh, i-o-ta** The impulse proceeds from, or consists in, the action of the respiratory muscles in expelling the breath, in concert with the muscular action in other organs that is required for the production of vocal tone or of articulative quality, — all conspiring together in the making of the syllable. It is the singleness of the muscular effort that makes the unity of the syllable, even though the outflow of breath be interrupted and the continuity of the sound be broken by a brief interval of silence, as it is in **spry, stay, sky, apse, apt, its, ax, act**

Two consecutive syllables in a word or phrase are made with two separate impulses They are not, however, ordinarily separated by a "rest" consisting of an absolute pause. Instead of this, we commonly have simply a *remission*, or *weakening*, a relaxation, of the stress at the end of the first syllable, succeeded by a fresh impulse for the one that follows The diphthong **I** (**Ice**, 19 *a*) is uttered with a single impulse from beginning to end. In the word **nī-īve**, exactly the same organic positions are taken, and in the same order, as in the **I** diphthong, — in the way the latter is very commonly pronounced The difference between the ī-ī in **nī-īve,** or **nī-īf,** and the **I** in **knife,** consists wholly in the different distribution of stress, and of quantity, among the different parts of the sound. It is the remission of stress in the middle of the vowel portion of the word, that makes the two syllables in **nī-īve.** The essential difference between the single ē sound, in the monosyllable **reel,** and the **e** repeated in two syllables in the word **rē-ē-lect** is the remission of stress in the latter case, with nothing of the kind in the former.

There is, indeed, *another way* in which we may conceive the separation between two consecutive syllables to be marked. If one syllable be strongly and the other weakly accented, the abrupt change from weak to strong, or strong to weak, as the case may be, would seem to be sufficient for the purpose Yet it may be doubted whether this means is made actually to serve independently of the other as above explained.

Every one of what we call *unaccented syllables* receives a separate though comparatively weak impulse; and this even when two or more such syllables occur in succession; as in **trav'el-er, va'ri-a-ble, va'ri-a-ble-ness.** The separation, in such case, is evidently made by remission of stress between the syllables.

Vowels are naturally bearers of stress Hence it is that a vowel, or a diphthong, forms as a rule the *core of a syllable*, flanked by consonants on one or both sides, when the vowel does not make the whole by itself — See § 151

PARTITION OF ELEMENTS It is to be premised that every speech element of the kind commonly represented by single characters, — sometimes by digraphs, — has a beginning, a middle, and an end, the three parts differing from each other more or less in quality, — though the difference is more clearly marked in some cases than in others When one of the mutes, **p, t, k,** or **b, d,** hard **g,** comes after another element, the organs close upon each other, remain closed for an instant, usually open again, and do so of necessity if another sound immediately follows, and each of these stages makes its particular impression on the hearer, - see § 185. Every speech element takes on a glide to or from others with which it happens to be associated in a syllable, word, or phrase, and may thus present a beginning, middle, and end

The syllable division may sometimes fall between such portions of an element, or upon one of them. Also, one or another of such parts will be brought out more or less prominently according to the situation it has in the syllable or the word.

LOOSE JUNCTION, CLOSE JUNCTION. When the syllabic division comes, by remission of stress, between two alphabetic elements, they may conveniently be spoken of as in *loose junction*, as opposed to the *close junction* by which the elements in a syllable are united. Thus we have loose junction in **ta-per, ac-tive, ac-rid, sap-ling, ob-lique, es-teem,** and close junction in **tape, act, cry, play, blow, steam** Loose junction is *one ground* of syllabic division.

MEDIAL REMISSION. The remission of stress sometimes falls on the middle part of a consonant, or somewhere within it, the consonant in such case making, — whether orthographically doubled or represented by a single letter, — close junction with vowels or other elements on each side; as in **at-(t)om, cop-(p)y, cit-(t)y, dit-ty, ut-ter, anat-(t)omy, at-tack, op-press, ap-ply, af-front, im-mense, im-(m)ag-(g)ine, er-ror, hol-ly, mel-(l)on, lev-(v)el,** etc. Medial remission occurs in the case of vowels or diphthongs but rarely, as in **o-olite, Bo-otes, re-elect, dy-ing, mot-ety,** and in word combinations such as **go over, be even, may aim, draw all,** etc. The remission of stress within an element thus gives *another ground* of syllabic division

WEAK JUNCTION. If two syllables, divided as above by remission of stress within a consonant, are unequally accented, the greater prominence will ordinarily fall to that part of the consonant that is on the stronger side, and the less to that on the weaker, thus making on that side what may be called a *weak junction*, as in

at'om, a-tone', etc. The division, in writing and print, will be determined accordingly, when the letter in question is not doubled. The prominence does, however, sometimes not fall to that part of the consonant which is on the stronger side, especially in the case of initial syllables; as in **im-ag'ine, en-a'ble, up-on', um-es'sy.**

A scrupulous discrimination and drawing of the line between weak junction and loose junction is not in all cases practically necessary.

In the case of consecutive unaccented syllables with a consonant between the vowels, it is often almost a matter of indifference, so far as concerns the pronunciation in ordinary speech, whether the consonant sound be regarded as attached more closely or prominently to the preceding or to the following syllable; as in **nom'i-nal, def'i-nite, fel'ō-ny, phan'ta-sy, sec'u-lar, ad'ju-tant, wag'on-er.** All depends on very slight differences in the distribution of the stress.

The SOUND of an alphabetic element will be DETERMINED to a considerable extent by the relation it has to the other parts of the syllable in which it stands and to another syllable adjoining. A close junction of two elements tends to bring into prominence the adjacent parts of each, the end of one and the beginning of the other: a loose or a weak junction either reduces those parts to slight prominence or causes an absolute mutilation on one or on both sides of the junction. Thus the close junction between **l** and **p** in **help** brings out strongly enough the initial part of the **p**; while in **Gil-pin** the loose junction causes the same part to drop out, leaving only the terminal portion in close junction with the following part of the syllable. In **at'om** we have the first part of a **t** brought into prominence, and the last part in **a-tone'.** The vanish of the vowels **ā** (**āle**), **ō** (**ōld**), and of the diphthong **ī** (**īce**), is apt to come out more distinctly in the close junction with a following element, — **as in tāpe, hāte, mōle, rīfle,** — than in the loose junction, — **as in tā-per, hā-tred, mō-lar, rī-fle.** The condition of syllables in loose junction is in some ways an approach to the condition of separate word. The **u** in loose junction with the preceding **l** in **val-ue, val-uation,** etc, gives clearly the **y** sound which **u** has at the beginning of a word, as in **use, union,** etc.; and yet loses the brief initial element that is retained in the close junction of **u** with **l**, in **lucid, lute,** etc.; — see § 184.

The ORTHOGRAPHIC DOUBLING of a consonant that makes a part of two adjoining syllables is apt to have an effect upon the pronunciation in quite deliberate speech, even when, in the ordinary manner of utterance, no difference will be made from cases in which the consonant is written single, as in **ditty, scatter,** compared with **city, atom.** The consonant is therefore in such case repeated in the respelling for pronunciation.

(**B.**) The NATURE AND KIND OF THE VOWELS which form the core of the syllables composing a word is the leading factor in determining the syllabic division of the word. It is this on which depends the kind of junction a vowel makes with the consonant that immediately follows between it and the vowel of the next following syllable; and it is this which, in so doing, goes far to determine the main questions that arise concerning syllabic division made on the basis of pronunciation.

LONG VOWELS. Any one of the "regular long" (§ 22) vowels, **ā, ē, ī, ō, ū,** besides **ä** (**ärm**) and **ą** (**ąll**) and the diphthongs **oi, ou,** — when followed by one or more consonants between it and the vowel of the next following syllable, — makes naturally a *loose junction* with the adjoining consonant, as in **tā-per, hā-tred, fā-ther, drā-ma, poi-son, Hē-brew, wą-ter, au-thor, ō-men, sō-lar, cow-slip, cō-bra, tū-mor,** etc. But this is impossible when we have two or more consonants not capable of beginning the following syllable, as in **pūr-ter, ān-gel, cām-bric, fär-ther, moun-tain.** It is also quite unnatural, if not impossible, in the case of **n, l,** or **v,** followed by **i** with a **y** sound (§ 106); as in **āl-ien, gēn-ius, ūn-ion, fōl-io, cornēl-ian, behāv-ior,** etc Again, with **st** a loose junction is not natural, as in **hās-ty, Eas-ter, pās-try, aus-tral** The long vowels as modified and shortened in unaccented syllables (and marked **ă, ĕ, ĭ, ŏ, ŭ**) always make loose junction in the situation in question, as in **miscellă-ny, rĕ-treat, sŏ-cĭ-ty, felŏ-ny, pŏ-litical,** etc

SHORT VOWELS All the "regular short" (§ 23) vowels, **ă, ĕ, ĭ, ŏ, ŭ,** besides **å** (**åsk**) and **ų** (**fųll**), or **o͝o** (**fo͝ot**), when *accented*, make the division come after a following consonant, as, **hăb'it, ha-bĭt'u-al, prŏph'et, pro-phĕt'ic, lĭv'id, ĕp'ĭdĕm'ic, sŭb'urb, tăb'let, săc'rament, vĕs'tige, pĕt'rify, jăs'per, lis'ten, mŭs'ket, cŏp'per,** etc. Also, — except **ĭ, ų,** or **o͝o,** and **å,** as explained below, — they all do the same when *unaccented*, as, **ăt-tack', ĕx-act', sys'tĕm-at'ic, mis'cĕl-la-ny, cŏn-nect', rec'ŏl-lect', sŭs-tain', sŭb-orn',** etc. But a different division is to be made when the consonant with the following vowel has the sound of **sh** or **zh** or **j**; as **ră'tion-al, spĕ'cial, dis-crĕ'tion, of-fĭ'cial, con-dĭ'tion, vĭ'sion, re-lĭ'gion,** etc.

Unaccented vowels which may make *loose junction* with a following consonant are the two, **ĭ** and **ų,** or **o͝o,** or **ū** as including the **o͝o** sound, — which are the wide and short high vowels at the extremes of the front and the back series in the vowel scale (see Diagram, p. xxxiv), as in **am'ĭ-ty, pres'ĭ-dent, vis'ĭ-ble, rų-gose', frų-gal'ity, sū-pe'rior, tū-to'rial, mū-nif'i-cent, Mal'ĭ-bran, cen'tĭ-grade, ped'ĭ-gree, dĭ-plo'ma,** etc.; and a third, **å,** which is at the other and common extreme of the two series, as in **dĭ'å-dem, å-board', å-broad', dis'å-gree',** etc.; the neutral vowel also, when in rapid speech the others fall into it (§ 17). They all usually make the loose junction when the consonant or consonants are capable of beginning the following syllable. But sometimes, in initial syllables, the **ĭ** takes so much stress as to throw the division over to the other side; as in **ĭm-ag'ine, dĭs-ease'.** Also, **ĭ** and **ų** attract and detach **s** from a following consonant; as in **dĭs-close', con'sĭs-to'rial, mag'ĭs-trate, ĭs-pire', ĭs-tom'ăch**; as **ų** would doubtless do if it occurred in the like situation. The obscure **e** (§§ 90, 91) and **a** (§ 69) take with them the **l, m, r,** etc.; as in **sev'ĕr-al, ev'ĕr-y, nov'el-ist, de'cen-cy, mac-ad'am-ize.** The **ä, ĕ, ĭ, ŏ, ŭ,** are noticed above.

The vowels that are always followed by **r**, namely, **å** (**cåre**), **ĕ** (**fĕrn**), or **ĭ** (**sĭr**) **ŏ** (**evŏr**), **ŏ** (**ŏrb**), and **ŭ** (**ŭrn**), are always in close junction with that consonant, whether accented or unaccented; as in **pår'ent, sĕr'vant, sev'ĕr-al, vĭr'tue, ŏr'dĕr, mŭr'rain,** etc.

TWO OR MORE CONSONANTS TOGETHER. Certain successions of elements can not, in English speech at least, be employed without intervening remission of stress. When two or more consonants come between vowels, four different cases arise —

1. The consonants may be capable of combining with a following but not with a preceding vowel, and thus of beginning but not of ending a syllable. In this case, if the preceding vowel is of a kind that favors loose junction, the division will come upon the vowel, as in **Ā'pril, hā'tred, sā'cred, prē-scribe', Mal'ĭ-bran, å-broad', sū-preme',** etc. If the vowel requires close junction, the division can come only between consonants; as in **Căp'ri-corn, pet'rĭ-fy, măd'rĭ-gal, min'ĭs-try,** etc.; since it can not come on the following vowel.

2. The consonants may be capable of combining with a preceding but not with a following vowel; and thus of ending but not of beginning a syllable. The division cannot thus come on the preceding vowel, and comes more naturally between consonants, as in **vĕr'dure, sur-rĕn'der, ān'gel, ŏn-dure',** etc., but, out of regard to etymological structure, may be allowed to come on the following vowel, as in **hōld-ing, build-er,** etc

3 The consonants may be capable of either beginning or ending a syllable; and thus the division may take now one, and now another, of the three possible positions; as in **bĕ-stow, dĕ-spair, măs-ter, dis-penso, răsp-ing, åsk-ing, hās-ty, hāst-ing, boast-ing**

4 The consonants may not together combine with a vowel so as to be able either to begin or to end a syllable, and the division must of necessity come somewhere between consonants, as in **bŭt-ler, first-ling, cŏn-strain, hōl-ster, Wil'ming-ton, Cām'bridge,** etc

ETYMOLOGICAL GROUND OF DIVISION. The pronunciation of words is often influenced by a regard to the etymological structure; and thus the syllabic division will to a certain extent be determined by etymology, though based upon pronunciation, — the principles above explained allowing a certain liberty of variation. What would otherwise more naturally — when the case is not really one of indifference — be a loose junction, may be converted, by an altered distribution of the stress, into one that is close, and likewise the reverse Thus, what would more naturally be **mā-ker, spea-ker, kee-ping, visi-tor, swee-ter, wąn-ting, wŏr-ker, mĕl-ting, trŭs-ty, hăr-per,** is readily and properly changed to **māk-er, speak-er, keep-ing, visit-er, sweet-er, wąnt-ing, wŏrk-er, mĕlt-ing, trŭst-y, hărp-er,** etc Thus, instead of **tran-smit, tran-sact,** we have **trans-mit, trans-act.** Vowel sound itself will sometimes be modified with reference to the etymology

Prefixes and *suffixes* which are such beyond question, and are universally and obviously recognizable, may properly be kept separate and entire But this principle may better be restricted to derivatives in which the spelling and the pronunciation (with the accentuation) remain as they were in the original words, as is not the case in **ăb'stĭ-nĕnce,** from **ăb-stain'; prĕs'ĭ-dĕnt,** from **prē-sīde', in'cĭ-dĕn'tăl,** from **in'cĭ-dĕnt, trĭ-ŭm'phant,** from **trī'ŭmph, im'pū-tā'tion,** from **im-pūte', cau-săl'i-ty,** from **cause; prŏc'lā-mā'tion,** from **prō-claim',** etc, and further, to those cases in which the meaning of the original is carried fully and plainly into the derivative, without deviation by specialization or otherwise; as is not the case in **trus-tee,** from **trust; even-tual,** from **event; trea-tise,** from **treat, respec-tive,** from **respect,** etc. In the cases in which a suffix is preceded by a long vowel under merely secondary stress, the more natural way of pronunciation is followed, in this Dictionary, in disregard of the etymology; as in **e-man'cĭ-pā'tor, or'gan-ĭ'zer, a-cid'u-lā'ted, an'te-dā'ted;** while the etymology is followed in the case of a long vowel, so situated and under a primary accent; as in **hāt'er, bap-tīz'er, dāt'ed, con'tra-vēn'ing,** etc. See the Rules (§ 276).

Since the intent and purpose of written words is to represent speech, there is really no good reason for allowing etymology to control syllabic division, in ordinary writing and print, in any other way than indirectly through its influence on the customary pronunciation. The chief occasion for such division is the break that is often required between lines. There are those, in England more than in this country, who divide according to etymology, in despite of pronunciation; but the prevailing custom is to follow the etymological division only so far as it may not absolutely conflict with that which fairly represents pronunciation.

§ 276. RULES FOR THE SYLLABIC DIVISION OF WORDS IN WRITING OR PRINT.

☞ The aim of this set of Rules is to furnish a sufficient practical guide for ordinary use.

Rule I. The members of a compound word, which are themselves English words with meanings recognized in the compound, are separated in syllabication; as, **foot-stool, mill-stone, way-faring**

Rule II. Two or more letters, when they represent a diphthong (**oi** in **oil, ou** in **out,** etc), or form a digraph or trigraph, whether vowel (**ai** = **ā, ă,** etc., **ea** = **ē, ĕ, ă, ĭ, ŏ, ē,** etc, **eau** = **ō, ū,** etc.) or consonant (**ph** = **f, gh** = **f, k,** etc., **th** in **thin** or **this, sh** in **ash, gn** in **sign, ng** in **sing, ss** in **peeress-es, sc** in **science, sch** in **schist, ck** in **sick,** etc), are not to be separated, but are to be treated as if they were single vowel or consonant letters; and this is to be understood when "vowel" or "consonant" is mentioned in the following Rules.

EXCEPTIONS. In **pas-sion, Hes-sian, expres-sion, mis-sion, pressure, fis-sure, is-sue,** etc. (see Rule IV, A, 2 & 3), the double **s** is divided, by Rule VIII.; while in the pronunciation (**păsh'ŭn,** etc.) the single **sh** — which wholly or partially represents three letters (§ 259) — is put together in the place of the first **s.** — For **sic-kle,** etc., see Rule IX.

Rule III. Two vowels coming together and sounded separately belong to separate syllables; **as, a-orta, a-eri-al, sci-ence, curi-osity, o-olite, ortho-epy, aye-aye, moi-ety, cow-ard, abey-ance, joy-ous, buoy-ant.**

Rule IV. A. Certain consonants are NOT TO END a syllable: —

1. **C** soft and **g** soft, as **wa-ger, ra-ging, enti-cing, eviden-cing, intelli-gen-cer, rava-ger, exe-gete, exi-gency, eulo-gize, delu-ging, orangery**; except as coming without another consonant next after a short accented vowel, or in the digraph **dg** = **j**, as **capăc'ity, măg'ic, rĕg'iment, prĕc'ipice, rĕc'itation, rustic'ity, dig'it, lŏg'ic, jūdg'ment, acknowlĕdg-ing, exăg'gerate, ăg'gerose'.**

2. A consonant (**t, s, z, ç, sc, g, d**), which wholly or partially absorbs a following **i** or **e**, and thus takes on or has the sound of **sh** or **zh** or **ch** or **j**; as, **con-dition, nă-tional, ră-tional, spē-cial, vi-cious, grā-cious, ō-cean,**

ŏbsolence; glā-zier, vi-sion, evā-sion, transi-tion; quĕs-tion, admixtion; reli-gion, pi-geon, contā-gious, sōl-dier.

EXCEPTIONS. **Right-eous** and its derivatives (see Rule VI., Exc. 4). — For **flux-ion**, etc., see Rule IV., B. — For **omnis-cient**, cf. **effi-cient, asciti-tious**, etc., and see Rules VII., VIII., NOTE. — For **pas-sion**, etc., see Rules II., EXC., and VIII., NOTE.

3. A consonant (**s, z, t, d**), which is modified by a following **u** towards or into **sh, zh, ch** or **j**; as, **cen-sure, sen-sual, commis-sure, im-sure, pressure** (see Rule II., EXC.); **era-sure, compo-sure, sei-zure; na-ture, feature, fu-ture, ves-ture, depar-ture, pas-ture, nur-ture, intellec-tual, tumul-tuous; proce-dure, ver-dure.** But this modified consonant is joined to the preceding short vowel or vowel digraph, when this is accented and no consonant intervenes; as, **ăz'ure, plĕas'ure, trĕas'ure, căs'ual; năt'ural, perpĕt'ual, habĭt'ual, congrăt'ulate, ĕd'ucate, nŏd'ule, schĕd'ule.** In general, this Rule does not give way to Rule V. in respect to etymology.

EXCEPTIONS. **Fraud-ulence, spirit-ual,** etc. See Rule V., 1.

B. Certain consonants are NOT TO BEGIN a syllable: —

1. X, with its proper sound = **ks** or **gz**; as, **anx-ious, ex-amine, vex-ation, complex-ion, crucifix-ion, flux-ion.**

2. R preceded by **ā** (or an equivalent); as, **pâr-ent, beâr-er, fâir-est**. or by **ē** (or an equivalent); as, **avēr-age, genēr-al, timor-ous, liquor-ice.**

3. A single **l** or **n** or **v** followed by **i** with the sound of consonant **y**, as, **fōl-io, āl-ien, pecūl-iar, carnēl-ian, gēn-ius, ūn-ion, convēn-ient, sāv-ior, behāv-ior; văl-iant, Spān-iard, bīl-ious, pavīl-ion, mīn-ion, ōn-ion.** — For **rebĕl-lion, păn-nier, rŭf-fian,** etc., see Rule VIII.

Rule V. Prefixes and suffixes are, in certain cases, to be separated from the body of the word, without regard to the general rules VI, VII, VIII. The cases are: —

1. When the separation will not misrepresent the pronunciation, as, **sweet-ish, sweet-er, sweet-en, sweet-en-ing, counter-act, trans-act, lead-er, hoard-ing, relent-ing, visit-ing, punish-er, district-ed, controvert-ed, heart-y, heart-i-ly, wasp-ish, eat-able.** When the syllable affixed causes a doubling of the final consonant of the stem, the added consonant goes with the added syllable; as, **glad-den, rob-ber, allot-ted, begin-ning, confer-ree, confer-rable, prefer-ring**

2. When the suffix displaces a final **e** silent of the stem; as, **māk'er, wāv'ing, hāt'ing, desīr'ing, promōt'er, overrūl'ing, overrāt'ed, baptīz'ing.**

LIMITATIONS. — This second case applies especially to the inflections of nouns and verbs having the primary accent on the last syllable of the stem, and to known derivatives in **er, est, ish,** and the like, from English words of this accentuation, and thus does not include **pros'tra-ted, a'era'ted, an'teda'ted, eman'cipa'ted, ex'erci'sing, com'promi'ser, deo'dori'zer, Is'raeli'tish, an'tido'tal,** and the like, which have a long — or modified long — vowel in the penult and follow Rule VI. The Rule, as a whole, while it applies to the recognized derivatives of many words besides those of primary accent at the end, — as to **vis'it-ing,** etc., — which are in little danger of being mispronounced, does *not* apply to any of these which differ from their English originals in spelling (as **ab'sti-nence** from **abstain'**), or in accentuation (as **pres'i-dent** from **pre-side'**, **in'ci-den'tal** from **in'ci-dent, tri-um'phant** from **tri'umph, im'pu-ta'tion** from **im-pute'**, **for-mal'ity** from **form**), or in special meaning (as **trus-tee'** from **trust, re-spec'tive** from **re-spect'**, **ver'bal** from **verb, sol'vent** from **solve**), etc.

3. Double suffixes may be separated, as, **logical-ly, magic-al, spheric-al, theologic-al, mythologic-al, heathen-ish-ly**, but when they come under the above limitations, the syllabic division must be determined by the general Rules (VI., VII., etc.). Thus we have **ma-nī'a-cal** (cf **ma'ni-ac**), **Mid'i-an-ī'tish** (from **Mid'i-an-ite**), **Is'ra-el-ī'tish** (from **Is'ra-el-ite**), etc.

Rule VI. When a single consonant (or digraph or trigraph; Rule II) comes between two sounded vowels (or equivalents, Rule II), it naturally joins the following vowel, as in **fa-ther, fa-vor, wa-ter, rea-son, poi-son, beau-ti-ful, prohi-bi-tion** (Rule IV.), **invali-date, provi-dence, sena-tor, senato-rial, fe-lo-nious, felo-ny, nomi-nal, no-ti-fy, no-ti-fi-ca-tion, ro-ta-to-ry, pla-guy, pla-gui-ly, ro-guish.**

EXCEPTION 1. When the preceding vowel is short and under an accent, as, **hăb'it, habĭt'ual, prŏph'et, prophĕt'ic, lĭv'i-l, livĭd'ity, acĕd'emy, ăc'adĕm'ic, admŏn'ish, bŏs'om, wŏm'an, pŭn'ish** — For **vi'sion, văl'iant,** etc., see Rule IV., A, 2, and B, 3.

EXCEPTION 2. In a prefix or an initial syllable, a short vowel though unaccented may take the following consonant; as, **ĭm-ăgine, ăb-ăctor, cŏncăcre, in-augurate, ĕn-ămor, dĭs-ărm, mĭs-anthropy, sŭb-ăstral**

EXCEPTION 3. The unaccented vowel **ŭ** or an equivalent, and sometime one of the other short or obscure vowels (**ŏ, ĭ, ŏ, *a*, *e***) especially in an unaccented root syllable, may take the following consonant, as, **visĭon-ary** (Rule V, 1), **custŏm-ary, symptŏm-atology, systĕm-atic, muskĕt-eer, visĭt-ation, circuit-eer, Mennŏn-ite, woman-ish, macad*a*m-ize, novel-ist.**

EXCEPTION 4. A long vowel may take the following consonant according to Rules IV., V., as, **āl-ien, mūk-er,** etc.

Rule VII. When two or more consonants, capable of beginning a syllable, come between two sounded vowels, —

A. ALL may be joined to the FOLLOWING vowel (see B below): —

1. When the preceding vowel is long and accented, or is capable of ending an unaccented syllable (§ 275 B); as, **enā'bling, Hē'brew, rų'bric, cȳ'clone, sā'cred, I'dler, hȳ'dra, trī'fler, bū'gler, ō'gress, pō'ple, Ā'pril, prē'script, hā'tred, neū'tral, inte-gral, terri-bly.**

2. When the following vowel is in an accented syllable; as, **o-blige', vi-bra'tion, cy-clop'ic, So-crat'ic, a-chro'matism, a-cros'tic, hy-drau'lic, reflect', re-frain', ana-glyph'ic, emi-gra'tion, re-ple'tion, e-qua'tion** [-kwā-], **i-gua'nodon** [-gwà-], **re-proof', de-scrip'tion, re-spect', re-splen'dent, be-stride', be-stow'al, be-twixt'.**

B. ONE of them may be joined to the PRECEDING vowel: —

1. When this vowel is short; as, **tăb-let, ăg-let, ăs-thenic, ăph-logistic, Af-rican, ĕq-uity** [-kw-], **liq-uid, fŭs-cation, jăs-per, ăs-tral, vĕstige, ĕs-teem, ancĕs-try, illŭs-tration, regĭs-tration, prŏs-tration, ŏb-lation, ŏb-ligation, nĕc-rological, prŏc-lamation, ăch-romatic, mĕd-ley, ăt-las, Păt-rick, rĕs-cue, bĭs-cuit, mŭs-ket, dŏs-man, dĕspotism, ĕs-pecial, ăb-rupt, săc-rament, pŏt-rify, Ĭs-lamism, omnĭscient.** — For **spē-çial, vi-sion,** etc., see Rule IV., A — For **troū-ble, doū-ble,** etc., see Rule IX — For **băgn-io, serăgl-io,** etc, see Rule X.

2. When the consonants are **st, str,** or **sp,** especially if the preceding or following syllable is under an accent, as, **mas'ter, empās'tic, aus-tere', aus'tral, Aus'trian, Aus-trā'lian, Eas'ter, hās'ty, hās'tily, pās'ty, pās'try, oys'ter, roys'ter, aus'cultation, aus-pi'cious, theopneus'tic, acous'tics, Lancas-tē'rian.**

C. COMBINATIONS like **st,** which are capable of ending as well as of beginning a syllable, may be joined etymologically to the PRECEDING vowel, according to Rule V., as, **hāst-ed, wāst-ing, ēast-ern, wĕst-ern, lāst-ed, cōast-er, pōstage, wāsp-ish, lisp-er, grāsp-er, āsk-er.**

Rule VIII. When two or more consonants, not capable of beginning a syllable, come between two sounded vowels, one or more, but not the whole of them, is joined to the preceding vowel, whether this vowel be long or short, as, **an-gel, chan-ging, cam-bric, fer-tile, oc-tave, sym-bol, min-strel, mortgage, in-jury, com-punc-tion, con-ver-sation, ar-chitec-ture, convul-sive, con-temp-tible, in-ciden-tal, trium-phant, diph-thong, for-mality.**

NOTE. — This Rule is particularly exemplified when a consonant is doubled, as the syllabic division is then usually made between these two letters; as, **bab-ble, stab-bing** (Rule V., 1), **rob-ber, bed-ding, red-der, dif-fer, ruf-fian, cabal-ler, metal-lic, excel-ling, excel-lence, expel-lable, mantil-la, distil-lation, rebel-lion, mil-lion, medal-lion, hal-liard, bril-liant, surveil-lance, pan-nier, ban-ner, Am-monite, dap-per, bar-ren, barring, os-say, pas-sion, ses-sion, mis-sion, at-tack, at-tic, diz-zy.** — See Rule II., EXC

EXCEPTION This Rule gives way to Rule V, when the derivative retains the spelling and accentuation and meaning of the root or the original word; as, **bank'er, bound'ed, cart'er, com'pass-es, dress'es, add'ing, ebb'ing, distill'er, conscript'ing, conflict'ing, nŏrth'ĕrn-ĕr, tŏmpt'ed, tĕll'er, tĕll'ing**

Rule IX. A. Words ending in **le** after a consonant other than **l** or **r**, and words from the French ending in **re** after a consonant other than **r**, generally follow Rules VII and VIII, the **le** or **re** being treated as a vowel followed by **l** or **r**, but in accordance with printers' usage, the **le** is not allowed to stand alone in the last syllable, as **a-ble, fee-ble, sensi-ble, trou-ble, cir-cle, spec-kle, tic-kle, buckle, grac-kle** [or **grā-kle**], **cod-dle** [or **cŏ-dle**], **tri-fle, muf-fle, kin-dle, han-dle, an-gle, an-kle, min-gle, ap-ple, cou-ple, sup ple, noz-zle** [or **nŏ-sle**], **ti-tle, bat-tle, this-tle, star-tle, daz-zle, sa bre, fi-bre, a-cre, massa-cre, lu-cre, mau-gre, sepul-chre, o-chre, elec-tre, spec-tre, me-tre, mi-tre, cen-tre, accou-tre, lus-tre, li-vre.**

B. Suffixes and inflections upon such words do not make separate syllables unless they begin with a consonant, as, **a-bler, a-blest, trou-bled, trou-bling, trifling, fee bly,** etc., **sa-bred, mi-tred, sa-bring, mi-tring, massa-crer,** etc. [cf **bat-tle-ment, i-dle-ness, sup-ple-ly, sa-ber-ing, mi-tered,** etc].

Rule X. Certain letters or combinations in foreign words, into which the sound of consonant **y** enters, are properly kept together in the same syllable, as, **gl** [= **ly**] in **serăgl-io, imbrō-glio, ō-glio, gn** [**ny**] in **băgn-io, cō-gnac,** etc. — For **ll** (in English), see Rule VIII., NOTE.

Rule XI. In writing and printing no syllable is separable which does not include a vowel Thus **chasm, hour, prism, James's,** etc, are treated as monosyllables

§ 277. SYNOPSIS OF WORDS DIFFERENTLY PRONOUNCED BY DIFFERENT ORTHOËPISTS.

THIS Synopsis, originally prepared for the Octavo abridgment of Webster's Dictionary in 1829, revised for the same in 1847, revised again and transferred to the Unabridged Dictionary in 1864, has been again revised, and adapted to present conditions in its selection of words and authorities and in its representation of the leading pronunciations now current. The words are about the same in number (nearly 1350) as in the edition of 1864, but many changes have been made in the list to increase its interest and usefulness. Recent authorities have been substituted for some that were formerly given. The aim of this Synopsis is not simply to gratify curiosity, but mainly to give information about words — especially important words — whose present pronunciation is a matter of doubt or controversy.

Of the dictionaries here cited, five — viz., Walker's, Smart's, Stormonth's, the Imperial, and the Encyclopædic — are English, and two — Webster's and Worcester's — are American. There are other orthoepists who are in good standing as authorities; but of those whose work is complete and available, these best represent the modes of pronunciation which now obtain consideration. In the table the modes of pronunciation given in the column under the caption *Webster* are those of this edition of Webster's Dictionary. The best editions of the works of all the lexicographers cited have been used in the preparation of the list.

John Walker, who was born in a parish of Middlesex, the metropolitan county of England, possessed superior qualifications for editing a pronouncing dictionary. In

early life he was an actor, and familiarly acquainted with Garrick and other theatrical celebrities who trod the stage at a time when it was universally considered the model of correct speech. Subsequently, he established himself as a teacher of elocution in London, Oxford, and various provincial towns in England, as well as in Scotland and Ireland; and becoming highly distinguished in that capacity, was patronised by many of the English nobility and gentry. In 1791, he published the first edition of his "Critical Pronouncing Dictionary and Expositor of the English Language." This work, which embodied the results of much careful observation and long-continued study of "the analogies of the language," became at once the popular manual of pronunciation, and ran through many editions, both in England and America. And even now, after the lapse of more than fourscore years since the issue of the last of the four editions revised by Walker himself, though custom has much changed in regard to many words, and though more recent and very meritorious works have taken its place, Walker's opinion and authority are too important to justify us in rejecting them altogether. The edition cited in this Synopsis, under the name of *Walker*, is the stereotype edition published in London in 1809 under the editorship of Mr. *John Murdoch*, who had long been intimately acquainted both with Walker personally and with his system, and was recommended for this special work by Walker himself a considerable time before the decease of the latter in 1807.

For many years the proprietors of Walker's Dictionary held the English market securely; and in 1836 they issued, under the title of "Walker Remodelled," and afterwards "Walker's Pronouncing Dictionary of the English Language adapted to the Present State of Literature and Science," an excellent and elaborate Pronouncing Dictionary by *B. H. Smart*, who, in an "epitomised" edition published in 1840, says of himself, "I pretend to reflect the oral usage of English such as it is at present among the sensible and well-educated in the British metropolis; and I am now to state what my opportunities have been of learning that usage. I am a Londoner, the son of a Londoner, and have lived nearly all my life in London. My early days were spent in preparing for a literary profession; and a 'Practical Grammar of English Pronunciation,' which I published thirty years ago, is an evidence of the length of time during which my attention has been fixed on the subject in view. It has been said that the example of pronunciation should be taken not exclusively from those who move only in the highest circles, nor yet from those who devote all their time to learning. I have been able to observe the usage of all classes. As a teacher of the English language and literature, I have been admitted into some of the first families in the kingdom; as one partial to books, I have come much into contact with bookish men; while, as a public reader and lecturer, I have been obliged to fashion my own pronunciation to the taste of the day. Thus prepared, I may not unwarrantably believe that my opinion may have some value with those who seek the opinion of another to regulate their pronunciation." In this Synopsis, the eighth edition of the above-mentioned Dictionary, issued in 1874, with a Supplement, etc., is quoted under the name of *Smart*.

The Pronouncing Dictionaries of Dr. *Joseph E. Worcester* give evidence of long-continued and conscientious attention to the subject of pronunciation. His quarto edition of 1859, with its Supplement issued in 1882, is here quoted under the name of *Worcester*.

The Dictionary of Rev. *James Stormonth* is one of the three new dictionaries cited in the Synopsis. Mr. Stormonth himself was a Scotchman, and died in 1882, but the pronunciation of his dictionary has been edited by Rev *Philip Henry Phelp*, who received his degrees of B. A. and M. A. at St. John's College, Cambridge, Eng.; and it is thus, as truly as that of Smart, representative of English conservative progress, and closely allied to Walker's in its general system of pronunciation

In the previous Synopsis there was cited, under the name of *Cull*, the "Comprehensive English Dictionary" of Dr. *John Ogilvie*, of Aberdeen, Scotland, in which the pronunciation is professedly "adapted to the best modern usage," by *Richard Cull*, Esq., of London, one of the contributors to the Penny Cyclopedia, and well known as an enthusiastic and learned phonologist. "The best modern usage," however, is assumed to be that of educated society in the city of London; and the assertion is made that "no system of pronunciation can be regarded as correct unless it be in strict conformity" with this standard. It must be added, that though both Smart and Cull claimed to exhibit the most approved London usage, they differed widely and often as to what that usage is. But the above-named Dictionary has been superseded in this Synopsis by another, also bearing Dr. Ogilvie's name, but not Mr. Cull's, "The *Imperial Dictionary* of the English Language," issued in 1888, as "carefully revised and greatly augmented," under the editorship of *Charles Annandale*, M. A., LL. D., Dr. Ogilvie having died in 1867.

"The *Encyclopædic Dictionary*," edited by Rev. *Robert Hunter*, M. A., LL. D., and issued in fourteen parts, 1879–1888, is the most recent dictionary which is cited in this Synopsis, and the most copious in its list of words. The Preface, in the last part, says: "The work has been carried on under the personal supervision of Mr. *John Williams*, M. A., late scholar of Trinity College, Oxford [Eng.], who has revised and signed every page for press, and who is responsible for the general arrangement of the work, especially as regards matters of style, pronunciation, etc." This dictionary is more nearly allied than are the others, in its system of pronunciation, to the long promised, but still incomplete, "*New English Dictionary* on Historical Principles," which is edited by *James A. H. Murray*, LL D., sometime President of the Philological Society, though it is far more simple than the latter in its notation of sounds. The Encyclopædic Dictionary's *a* in *ask*, *asp*, is not the *a* in *am* (ă) — which is thus given by Walker, Smart, Stormonth, and the Imperial Dictionary — but the *a* in *father* (ä); and its *a* in *a-mend'*, *com'ma*, is, in distinction from either of the preceding, marked as the obscure *a* in *a-midst'*, and in this agrees with Smart and Webster. Unlike Walker, it distinguishes the ā in *fāte* from the *a* in *fare;* the ē in *wē* from the *e* in *here*, the ī in *pīne* from the *i* in *sire;* the ō in *gō* from the *o* in *wore;* the ū in *mūte* from the *u* in *cure*. More than Smart's or Stormonth's, or even the Imperial Dictionary, it revolts from Walker's systematic disregard of etymology in the pronunciation of derivatives and compounds. Thus, instead of Walker's *bīp'ar-tīte*, *hĕr'o-izm*, *Plăt'o-nist*, this pronounces *bī-pär'tite*, *hē'ro-izm*, *Plā'to-nist*, the meanings of which are readily understood from their likeness to *pär'tite* (or *part*), *hēro*, and *Plā'to*.

The diverse systems of notation employed by the orthoepists whose modes of pronunciation are here reported are of necessity represented by that which is used in this Dictionary, and although, as a consequence, the precise shade of sound intended may not in all cases be expressed with minute accuracy, yet it is believed that very few, if any, important discrepancies will be found to exist. It should be noticed, however, that Stormonth and the Imperial, as well as Walker, ascribe the sound of *a* in *am* (our ă) to the *a* in such words as *ask*, *sym'pa-thy*, *a-mend'*, *com'ma*, for which this Dictionary has *ä;* that Walker makes no distinction between the *e* in *herd* (our ĕ) and the *e* (ĕ) in *end* or *in-her'it;* that Worcester's obscure sounds — as of *a* in *ab-do'men*, *a-mend'*, *li'ar*, *cour'age;* *e* in *brit'er*, *fu'el;* *i* in *ru'in;* *o* in *o-bey'*, *confess';* *u* in *cir'cus*, *dep'u-ty*, etc. — are represented here, as in the revision of this Synopsis made in 1864, by unmarked vowels; that Smart's apostrophe is used for his pronunciation, as he used it, to mark "the sound as of a partially suppressed *e;*" and that the number of words for which two modes of pronunciation are used is considerably increased, for reasons which will be obvious to those who carefully study this Synopsis.

☞ In this Synopsis, brackets [ ] indicate the pronunciation of kindred words taken to serve in place of the Synoptical words, when the latter are not found in the particular dictionaries thus represented.

ORTHOGRAPHY.

OBSERVATIONS.

THE English language, as being the offspring of two parent languages very different in form and spirit, and having been, in no inconsiderable degree, modified in its growth by influences from various other tongues, contains, as was inevitable, very many anomalies; and in no particular are these anomalies more numerous and striking than in its orthography, with the single exception, perhaps, of its orthoepy. Neither the Anglo-Saxon nor the Norman-French could boast of any great regularity in orthography, though the spelling of words in these two languages was far less arbitrary than it is in the modern English. When, therefore, the vocabularies of these two languages, widely different both in their orthographical structure and their phonological character, were combined, the result was a language in which the orthography has almost reached the extreme of irregularity. To such an extent, in fact, have the signs representing sounds been multiplied, that many of the letters are pronounced in several different ways, while the letters, or combinations of letters, for a single sound amount, in some cases, to scores. Indeed, it is computed that many words of no more than two syllables may be spelled in several thousand different modes, by the use of combinations actually employed in other words in the language. The word *scissors*, for instance, may be thus written, as is computed by Ellis, in nearly six thousand different ways. Of course, comparatively very few of these possible forms of spelling are ever employed in the case of any one word; yet the causes of disorder mentioned above have operated so effectually, that the words in respect to which even the most careful writers are at variance are numbered by thousands, while those in which an orthography contrary to analogy has been universally adopted are equally numerous.

Bad as is the orthography of the present day, however, it is order itself compared with that of a few centuries ago. It would, of course, be unreasonable to expect that there should be any general correspondence of orthographical forms in the works of different authors before the types of the printer gave prominence to certain forms, which finally became recognized as standards; and manuscripts conclusively prove that the wildest license prevailed in spelling words. Even proper names, which would naturally receive more attention, and be written with more care than any other class of words, are found recorded in great multitudes of forms, several variations being sometimes found in the same manuscript or work. Disraeli states that "Leicester has subscribed his own name eight different ways," and that "the name *Villers* is spelled fourteen different ways in the deeds of that family." A still more remarkable instance is stated by Lower; namely, that the family of *Mainwaring* has the extraordinary number of one hundred and thirty-one variations of that single name, all drawn from authorized documents. But there is evidence that, in the midst of all this confusion, there were some writers who were attentive to the proper forms of words, and who were notable exceptions to the general rule. The spelling of the Ormulum, which was written in the thirteenth century, though strange and cumbrous, is very remarkable for its regularity; and the author strenuously urges his copyists to follow his orthography with the utmost exactness (See page xliii.) So also Chaucer, more than a century later, carefully revised and corrected his own works; and he enjoined upon his scribe to "write more trew" that which was intrusted to him, saying that he was obliged "it to correct and eke to rubbe and scrape," because of the negligence and haste with which it had been copied.

The invention of printing commenced a new era, though for a long time even this had little effect to fix the exterior form of the language. Indeed, much of the perverse orthography of books printed two or three centuries ago is to be attributed to the printer, who often inserted or expunged letters as the length of the lines or convenience of spacing required. It is no uncommon thing to find, in the works of Chaucer, Spenser, and other early writers, or in books printed two or three centuries ago, the same words occurring in several different forms upon the same page. Even as late as the time of Shakespeare, orthography was very unsettled, and, as Halliwell states, the name of the great bard himself was written in more than thirty different ways. The printers, however, were not solely, nor even chiefly, responsible for this confusion; for it is certain that their arbitrary changes and deviations from uniformity would not have been tolerated had they been made in defiance of established usage, and there is abundant evidence to prove that writers themselves were careless in the extreme. The fact must not be overlooked, that in the writings of Wyclif, Chaucer, and other early authors, there were still many remnants of the Semi-Saxon inflection, which have since utterly disappeared, and which gave to some words a variety of form to be attributed neither to the carelessness of the writer, nor to an unsettled orthography. For copious examples, see pages xlii–xliv.

The irregularities found in early books, though continuing for so long a time, were neither unnoticed nor looked upon with indifference. On the contrary, not only have numerous complete systems for the reformation of orthography been proposed, but various scholars have advocated, with more or less acuteness and learning, changes in regard to a great number of particular points. Sir Thomas Smith, Secretary of State to Queen Elizabeth, was the first who endeavored to introduce a regular system of orthography; after him, William Bullokar brought forward another system, a few years after this, Dr. Gill, Master of St. Paul's School, in London, a teacher of considerable eminence, proposed another scheme; and, still later, Charles Butler devised a new method of spelling, and printed a book in which it was employed. These writers agreed essentially as to the manner in which they sought to attain the end proposed, their plan being to reduce the spelling of words to uniform principles and make it practically phonetic, by the use of new characters, by applying various diacritical marks to the old letters, and by making the letters, or their combinations of characters, represent certain definite sounds. It is needless to say that these projects were never carried into practice.

In the time of Charles I., many changes were introduced; and it was very common, even among eminent scholars, to spell words according to their pronunciation, omitting such letters as were deemed superfluous. These attempts at improvement, being made upon no settled or uniform principles, had little or no permanent effect upon the language. Another elaborate plan was proposed, in the seventeenth century, by Bishop Wilkins, similar in its general character to those of Smith, Bullokar, Gill, and Butler, and equally unsuccessful.

The celebrated Dictionary of Dr. Samuel Johnson, first published in 1755, has contributed more than any work written, either before or since, to fix the external form of the language and to diminish the number of irregularities; for though numerous inconsistencies are to be found in it, and many oversights, the learning of the author, and the sound judgment and practical wisdom which he displayed, gave it at once an authority which it has not even yet entirely lost; and the orthography of the present day, though it has received some important modifications since his time, is substantially the same as that exhibited in his dictionary. The changes in the spelling of words, introduced by Dr. Johnson, were generally made in order to restore the ancient orthography, or to remove some anomaly, and perhaps the most important office performed by his work was its having settled usage definitely in favor of some one of the numerous forms in which many words were written, thus removing the cause of much confusion. Among the most prominent alterations made by him were the restoration of *k* to many words which had long been written without it, as in *musick*, *rhetorick*, and the like, and the insertion of *u* in the termination of many words which previously ended in *or*, as in *ancestour*, *authour*, *errour*, and others. The former of these changes, a revival of the "ancient practice," was not received with favor, nor was this spelling adopted by subsequent writers, the latter, as it was thought to be justified by the analogy of the corresponding termination *eur* in the French, through which language many, perhaps a majority, of the words affected by it were derived from the Latin, was generally followed. Johnson's practice in this respect, however, was not in harmony with his theory, for he wrote only about half the words of this class with the ending *our*, leaving the rest in *or*, though for no reason that would not equally apply to them all. Yet this notable inconsistency was not only overlooked, but was perpetuated, and still exists in the orthography of English writers. In the United States a different practice prevails, as will presently be mentioned.

The scheme of Pinkerton, who, in 1785, under the name of Robert Heron, proposed to render the language more euphonious by adding vowels to words ending in consonants, and by pronouncing the silent final vowels of others, in a manner perfectly arbitrary, is too ridiculous to deserve further mention. About twenty years later another absurd plan was published by Elphinstone, who printed a book in order to introduce it, but without success. During the last century, several English divines, as Lardner, Benson, and others, employed in many words methods of spelling peculiar to themselves, chiefly such as had long been abandoned, as in writing *ie* for final *y*; in adding *e* to words ending in *as*; and in the use of such forms as *præface*, *persue*, *procede*, *sais* (for *says*), and the like. So also Mitford used many singular forms, such as *aland*, *intire*, *endevor*, *mee* (for *mere*), *tho* (for *though*), *spred*, etc. It is proper to mention here also the innovations of Archdeacon Hare, in the present century, who, on the ground of pronunciation, etymology, and analogy, employed in his works such forms as *atchieve*, *compell*, *enure*, *firy* (for *fiery*), *forein*, *invey* (for *inveigh*), *highth*, *ploughman*, *smugler*, and the like. He not only omitted the hyphen in many compound words where it has been usually inserted, but also advocated the omission of the apostrophe in the possessive case, and the substitution of *t* for *ed* in those preterits in which the latter termination is pronounced like *t*, as in *exprest*, *fixt*, *publisht*, etc., for *expressed*, *fixed*, *published*, etc. This substitution of *t* for *ed*, however, is not peculiar to Hare, since it accords with the usage of the early writers and of many, both poets and prose writers, in later times. The use of the hyphen, also, in compound words, has not even yet been settled in all its minutiæ.

Besides the imperfect attempts mentioned above, many plans have been devised, at different times, for reducing the spelling of words to absolute uniformity and the greatest simplicity, by a complete reform in the method of representing the sounds of words by written characters; that is, by employing a new alphabet in which each sign stands for one, and only one, definite sound, and each sound is represented by one, and only one, character. Such a method of spelling was invented by Dr Franklin, in the last century, though he never brought it to perfection, and scarcely used it, except in a brief correspondence with a friend. The most recent, and in every respect the most comprehensive and philosophical, scheme of this kind, is that of which Mr. A. J. Ellis, of Cambridge, England, has been the most prominent advocate and representative, and to a large extent the inventor. The alphabet in this system contains about forty characters, each of which represents but a single sound, so that a word written according to this method could be pronounced in only one way. Although this system has received great publicity, and has had many earnest supporters, it has gained no ground in the public favor, and has finally been abandoned by its author as a means of reforming orthography. The schemes of Lepsius, Müller, and others who have endeavored to form philosophical alphabets of universal application, are hardly to be mentioned here, as they are but indirectly related to English orthography.

In 1828, Dr. Webster published his Dictionary of the English Language, and the changes in spelling advocated by him have had no inconsiderable influence upon

orthography, especially in the United States. These alterations were proposed by him chiefly on the ground of etymology and of analogy, from a desire, on the one hand, to make the words correspond, as far as practicable, with their primitive forms, so as to reveal more clearly their etymological affinities, and on the other to reduce as much as possible the number of anomalies and exceptional cases. Of the words whose orthography had been changed for the former reason, many were restored to their ordinary forms by Dr. Webster himself in the second edition of his work, published in 1841, and others still were restored in subsequent editions. The alterations of the second class have been received with favor and adopted by a large portion of the writers in the United States, and by some authors also in England.

It is to be observed that many of Dr. Webster's deviations from the usage of his time were not innovations, but restorations of older forms which were once very generally employed. The most important points in which his orthography differs from that of most other modern lexicographers, and in reference to which there is still difference of usage among scholars, are stated in the following list, in which the numbers refer to the sections of the Rules for Spelling Certain Classes of Words (see below), where the cases are mentioned particularly. These are, the not doubling the final consonant in derivatives of words like *travel*, *worship*, etc. (§ 8); doubling the final letter in such words as *fulfill*, *instill*, etc. (§ 16); retaining the *i* in derivatives of *villain* (§ 27); writing *defense*, *offense*, etc., for *defence*, *offence*, etc., and *practice* for *practise* (§ 27); writing the termination *-er* for *-re* in words like *center*, *meter*, etc. (§ 31); writing *mold* and *molt* without *u* (§ 34). It may be remarked further with regard to words often written with the termination *-re*, but which in this book are spelled with two endings, *-er* and *-re*, that the use of *-er*, as in *meter*, etc., is but a restoration of the older spelling; and the same is true of the substitution of the termination *-or* for *-our*.

RULES FOR SPELLING CERTAIN CLASSES OF WORDS,

FOUNDED ON THE ORTHOGRAPHY OF DR. WEBSTER, AS EXHIBITED IN THIS VOLUME.

§ 1. The letters *f* and *l*, at the end of monosyllables, and standing immediately after single vowels, are generally doubled: as in *staff*, *cliff*, *doff*, *puff*; *all*, *bell*, *hill*, *toll*, *null*. The words *clef*, *if*, *of*, *pal*, *nil*, and *sol*, are the most important exceptions.

§ 2. The letter *s*, at the end of a monosyllable, and standing immediately after a single vowel, is generally doubled, except when — e. g., in *o's*, *spade's*, *tones*, *loves*, *has*, *is*, *was*, etc. — it is used to form the possessive case or plural of a noun, or the third person singular of a verb; as in *grass*, *press*, *kiss*, *moss*, *truss*. The only important exceptions are *as*, *gas*, *yes*, *gris*, *his*, *this*, *pus*, *plus*, *bus* (for *omnibus*), *thus*, and *us*.

§ 3. Besides *f*, *l*, and *s*, the only consonants that are ever doubled at the end of a word are *b*, *d*, *g*, *m*, *n*, *p*, *r*, *t*, and *z*. The following list contains nearly all the words in which these letters are doubled, including some which are spelled more or less with a single consonant. namely, *abb*, *ebb*; *add*, *odd*, *dodd*, *wadd* (Min.), *rudd*; *jagg*, *egg*, *bigg* (n. & v.), *snigg*, *vugg*, *lamm*, *scomm*, *mumm* (to mask), *Ann*, *ann* (Law), *inn*, *Finn*, *finn*, *wynn*, *bunn*, *sunn* (Bot.); *Lapp*, *wapp*, *gnarr*, *parr*, *err*, *birr*, *shirr*, *skirr*, *dorr*, *mhorr*, *burr*, *hurr*, *murr*, *purr*; *brett*, *fl ett*, *butt* (Naut.), *mitt*, *plitt*, *smitt*, *pott* (paper), *butt*; *fizz*, *frizz*, *buzz*, *fuzz*, *huzz*.

NOTE. — The words *let*, *net*, and *set* are sometimes incorrectly spelled *lett*, *nett*, and *sett*; and some other words which should have the final letter single are spelled, by some writers, with it doubled.

§ 4. A consonant standing at the end of a word immediately after a diphthong or double vowel is rarely doubled. The words *ail*, *peat*, *haul*, *door*, and *marm*, are examples. The words *feoff*, *enfeoff*, *gneiss*, *speiss*, *houss* (obs) are exceptions. The word *guess* is only an apparent exception, as the *u* does not strictly form a diphthong with the *e*, but serves merely to render the *g* hard.

§ 5. Monosyllables ending, as pronounced, with the sound of *k*, and in which *c* follows the vowel, have usually *k* added after the *c*, as in *black*, *fleck*, *click*, *knock*, and *buck*. The words *bac*, *lac*, *sac*, *tac*, *talc*, *zinc*, *ploc*, *roc*, *soc*, *arc*, *marc*, *orc*, *torc*, *disc*, and *fisc*, are exceptions.

Words of more than one syllable, ending in *-ic* or *-iac*, which formerly ended in *k*, also words derived from the Latin or Greek, or from other sources, and similar to these, or formed in an analogous manner, are now written without the *k*; as, *maniac*, *elegiac*, *zodiac*, *cubic*, *music*, *public*. The word *derrick* is an exception. Words of more than one syllable, in which *c* is preceded by other vowels than *i* or *a*, commonly end in *ck*; as, *arrack*, *barrack*, *hammock*, *hillock*, *wedlock*. The words *almanac*, *carac*, *sandarac*, *limbec*, *rebec*, *varec*, *zebec*, *manioc* or *mandioc*, *havoc*, are exceptions. *Almanac*, *limbec*, *rebec*, and *havoc*, however, are sometimes written with *k* after the *c*, especially in England; and *carac* is oftener written *carack* or *carrack*.

§ 6. In derivatives formed from words ending in *c*, by adding a termination beginning with *e*, *i*, or *y*, the letter *k* is inserted after the *c*, in order that the latter may not be inaccurately pronounced like *s* before the following vowel. as, *colic*, *colicky*; *traffic*, *trafficked*, *trafficking*, *trafficker*; *physic*, *physicked*, *physicking*; *zinc*, *zincked*, *zincking*, *zincky*. We find also *zinc'ing*, *zinc'ite*, *zink'y* (as from *zink*), etc., not conformed to this rule.

§ 7. In derivatives formed by adding a termination beginning with a vowel to monosyllables and words accented on the last syllable, when these words end in a single consonant (except *h* and *x*) preceded by a single vowel, that consonant is doubled: as, *clan*, *clan'nish*; *plan*, *planned*, *plan'ning*, *plan'ner*; *bag*, *bag'gage*; *hot*, *hot'ter*, *hot'test*; *wit*, *wit'ty*; *cabal'*, *cabal'ler*, *abet'*, *abet'ted*, *abet'ting*, *abet'tor*; *begin'*, *begin'ning*, *begin'ner*; *infer'*, *inferred'*, *infer'ring*. The consonant is doubled in these words in order to preserve the short sound of the vowel, as otherwise the latter would be liable to be pronounced long. Thus, *plănned*, *hŏttest*, and *abĕtted*, would naturally be pronounced *plāned*, *hōtest*, and *abēted*, if the consonant were not doubled. Words of this class, in which the final consonant is preceded by *qu*, followed by a single vowel, form no exception to the rule, since the *u* performs the office of the consonant *w*: as, *squab*, *squab'bish*, *squab'by*; *squat*, *squat'ting*, *squat'ter*, *quit*, *quit'ted*, *quit'ting*; *acquit'*, *acquit'ted*, *acquit'ting*.

The derivatives of the word *gas* (except *gas'sing* and *gas'sy*) are written with but one *s*; as, *gas'eous*, *gase'ity*, *gas'ify*. *Excellence*, as being from the Latin *excellens*, retains the double *l*, though one *l* has been dropped from the termination of *excel'*. Besides these, the chief exceptions to the rule are those derivatives in which the accent of the primitive is thrown back upon another syllable: as, *cabal'*, *cab'alism*, *cab'alist*; *prefer'*, *preference*; *refer'*, *reference*; *defer'*, *deference*. But *infer'able*, *transfer'able*, are common exceptions. It is no exception to this rule that *chancellor*, and the derivatives of *metal* and *crystal*, as *metalloid*, *metallurgy*, *crystalline*, *crystallize*, and the like, are written with the *l* doubled, since they are derived respectively from the Latin *cancellarius* (through the French), and *metallum*, and the Greek κρύσταλλος. So also the word *tranquillity* retains the double *l*, as being from the Latin *tranquillitas*, while the English derivatives of *tranquil*, though often written with two *l*'s, are more properly written with only one, as *tranquilize*, *tranquilizer*, and the like.

§ 8. When a diphthong, or a digraph representing a vowel sound, precedes the final consonant of a word, or the accent of a word ending in a single consonant falls on any other syllable than the last, or when the word ends in two different consonants, the final consonant is not doubled in derivatives formed by the addition of a termination beginning with a vowel: as, *daub*, *daubed*, *daub'er*; *need*, *need'y*; *brief*, *brief'er*, *brief'est*; *trav'ail*, *trav'ailed*, *trav'ailing*; *rev'el*, *rev'eled*, *rev'eling*; *trav'el*, *trav'eling*, *trav'eler*; *prof'it*, *prof'ited*; *act*, *act'ed*, *ac'tor*; *perform'*, *perform'er*; *stand*, *stand'ing*.

The final consonant is doubled in the derivatives of a few words ending in *g* in order to diminish the liability to its being pronounced like *j*, before *e* or *i*: as, *hum'bug'*, *hum'bugged'*, *hum'bug'ging*, *per'wig*, *per'wigged*. The derivatives of *kid'nap'*, which properly has a secondary accent on the final syllable, are spelled with or without the *p* doubled; as, *kid'naped'* or *kid'napped'*, *kid'nap'ing* or *kid'nap'ping*, *kid'nap'er* or *kid'nap'per*. The word *wool'en* is more generally thus written, in the United States, with one *l*; but in England it is written *wool'len*.

NOTE. — There is a large class of words ending in a single consonant, and accented on some other syllable than the last, the final consonants of which are, by very many writers and lexicographers, doubled in their derivatives, unnecessarily and contrarily to analogy. These words are chiefly those ending in *l*, with also a few of other terminations. The following list, the words in which are chiefly verbs, includes the most important of those in regard to which usage varies: namely, *apparel*, *barrel*, *bevel*, *bias*, *bowel* and its compounds, *cancel*, *carburet* and all similar words ending in *-uret*, *carol*, *carol*, *channel*, *chisel*, *counsel*, *cudgel*, *dial*, *dishevel*, *dowel*, *drivel*, *duel*, *empanel*, *enamel*, *equal*, *funnel*, *gambol*, *gravel*, *grovel*, *handsel*, *hatchel*, *imperil*, *jewel*, *kennel*, *kidnap*, *label*, *laurel*, *level*, *libel*, *marshal*, *marvel*, *metal* (see § 7), *medal*, *model*, *panel*, *parallel*, *parcel*, *pencil*, *peril*, *pistol*, *pommel*, *quarrel*, *ravel*, *revel*, *rival*, *rowel*, *shovel*, *shrivel*, *snivel*, *tassel*, *tinsel*, *trammel*, *travel*, *tunnel*, *unravel*, *vial*, *victual*, *worship*. Worcester doubles the final letters of all these words, except *parallel*, in forming derivatives by the addition of terminations beginning with vowels, though he remarks, with respect to those ending in *l*, that "it better accords with the analogy of the language" to spell their derivatives with but one *l*. Smart retains the double consonant in this class of words solely on the ground that usage favors it, but remarks that "the double *p* in *worshipped*, *worshipper*, etc., the second *l* in *travelling*, *traveller*, etc., are quite unnecessary on any other score than to satisfy the prejudices of the eye." Cooley doubles the consonant in a majority of the derivatives of words of this class, but writes a single consonant in many, as in those of *apparel*, *barrel*, *bevel*, *channel*, *drivel*, *gambol*, etc. Stormonth doubles the final consonant in this class, except in the derivatives of *channel*, *dial*, *parallel*, *pistol*, and in some of those from *equal*, *peril*, *quarrel*, *victual*, *worship*. The *Imperial* agrees with Stormonth in respect to derivatives of *dial*, *equal*, *parallel*, *peril*, *pistol*, *victual*, and most derivatives of *worship*; doubles the *l* in derivatives of *channel*, gives *caroling* or *carolling* as a noun, *duellist* and *duelist*, *enamelar* and *enamellar*, and so *-or* and *-ist*; has *quarrellous* and *quarrelous* — Stormonth giving only the latter, but both agreeing in *quarrelled*, *quarrelling*, *quarreller*, — while the *Imperial* increases the breach with *trammeler* and *trammeller*, *worshipper* and *worshiper*, *gamboled* or *gambolled*, *gamboling* or *gambolling*, etc. The *Encyclopædic Dictionary* gives both ways for derivatives of *bias*, *channel* (except *channelize*), *drivel*, *ravel*, etc.; but marks *beveled* and *beveling* as rare, and *worshiper* as obsolete; generally omits the participles, except in citations; and appears to favor the use of the double *l*, etc., in most of these derivatives. Perry wrote the derivatives of these words with but one *l*, according to the rule, and the same practice was advocated by Walker. Conformity to the regular rule has been advocated also by other eminent scholars; but, for the accommodation of the whole English-speaking public, both of the prevalent spellings are usually given in this Dictionary, that with the single consonant having the first place. See "A List of Words," after § 36.

§ 9. Derivatives formed from words ending in a double consonant, by adding one or more syllables, commonly retain both consonants: as, *ebb*, *ebbing*; *odd*, *oddly*; *stiff*, *stiffness*; *fell*, *fellable*; *skill*, *skillful*, *skillfulness*, *will*, *willful*, *willfulness*; *dull*, *dullness*; *full*, *fullness*. So also the double *l* is retained in the words *installment*, *inthrallment*, *thralldom*, and *enrollment* (from *install*, *inthrall*, *thrall*, and *enroll*), in order to prevent a false pronunciation if spelled with one *l*. Many writers and lexicographers, especially in England, omit one *l* in these words, as also in the derivatives of *skill*, *will*, *dull*, and *full*, formed by adding the syllables *-ly* and *-ness*. See §§ 16, 17.

The derivatives of *pontiff* are exceptions to the rule, being written with only one *f*; as, *pontific*, *pontifical*, *pontificial*, and the like. One *l* is also dropped in a few words

formed by adding the termination *-ly* to words ending in *ll*, in order to prevent the concurrence of three *l's*: as, *ill, illy; dull, dully; full, fully.* Words similarly formed by adding the termination *-less*, however, are written either with the three *l's*, a hyphen being inserted before the termination, or with two *l's*, and without the hyphen; as, *skill-less* or *skilless, smell-less* or *smelless.*

§ 10. In derivatives formed from words ending with silent *e*, the *e* is generally retained when the termination begins with a consonant: as, *pale, paleness; hate, hateful; incite, incitement; chaste, chastely, chasteness; move, movement.* When, however, the *e* is immediately preceded by another vowel (except *e*), it is often dropped from the derivative: as, *woe* (sometimes *wo*), *woful* or *woeful; due, duly; argue, argument; true, truly; awe, awful;* and the derivatives and compounds of these words.

The words *wholly, nursling, wisdom, abridgment, acknowledgment, lodgment, judgment,* and the compounds of some of these, are exceptions. The last four, however, are written, by many authors, *abridgement, acknowledgement, lodgement, judgement.*

§ 11. In derivatives formed from words ending with silent *e*, when the termination begins with a vowel, the *e* is generally omitted, except in the cases mentioned in the next paragraph: as, *bride, bridal; guide, guidance; plume, plumage; use, usable, usage; grieve, grievance; come, coming; shape, shaping; move, movable; sale, salable; fleece, fleecy; force, forcible; true, truism.*

The *e* is retained in the words *hoeing, shoeing,* and *toeing* (from *hoe, shoe,* and *toe*), in order to guard against mispronunciation, and is generally, for a like reason, excluded from *shoer* (cf. *hoed, shod, toed*). It is retained, also, in the words *dyeing, singeing, springeing, swingeing, tingeing* (from *dye, singe, springe, swinge, tinge*), to distinguish them from *dying, singing, springing, swinging, tinging* (from *die, sing, spring, swing, ting*). The word *mileage*, as commonly written, does not omit the *e*, though it is sometimes, and more correctly, spelled *milage.* The words *lineage, lineal,* and *pineal*, though apparently exceptions, are not really such, since they are derived not directly from *line* and *pine*, but from the Latin *linea* (through the French), *lineals*, and *pinea.* The *e*, standing, in a derivative, before a termination beginning with *a* or *o*, and immediately after *c* or *g*, is retained in order to prevent the pronunciation of these consonants with the hard sound: as, *peace, peaceable; notice, noticeable; manage, manageable, change, changeable; advantage, advantageous; outrage, outrageous; mortgage, mortgageor.* The latter word is sometimes improperly written *mortgagor*, and pronounced *mor'ga-jor'.* Walker wrote *moveable* and *saleable*, Worcester gives only *movable, salable,* and *usable*, Smart and Stormonth give only — what the *Imperial* and the *Encyclopædic* prefer — *movable* and *saleable*; the *Imperial* joins Stormonth in inserting *usable* only; while the *Encyclopædic* marks *salable, usable,* and *useable* as obsolete.

§ 12. In derivatives formed from words ending in *ie*, by adding the termination *-ing*, the *e* is usually dropped, and the *i* changed to *y*, in order to prevent two *i's* from coming together: as, *die, dying; hie, hying* — but Ash, Stormonth, and the *Imperial* write *hieing; — lie, lying; tie, tying, vie, vying.*

§ 13. In derivatives of words ending in *y*, preceded by a consonant, and formed by appending any termination except one beginning with *i*, the *y* is usually changed into *i*: as, *icy, iciest, icily; mercy, merciless; tidy, tidiness; modify, modifies; foggy, fogginess; earthy, earthiness; pity, pitiful.*

The derivatives of adjectives of one syllable ending in *y*, preceded by a consonant, are exceptions, and usually retain the *y*: as, *shy, shyness, sly, slyest, dry, dryly, spry, spryer, spryest; wry, wryness.* But the adjectives *drier* and *driest*, from *dry*, are commonly written with *i* instead of *y*, and the forms *drily, shily, slily*, are not uncommon. Derivatives formed by adding the termination *-ship*, as *secretaryship, suretyship, ladyship*, and the like, also retain the *y*, though some authors write them with *i*, according to the rule. Derivatives in *-like*, as *citylike, countrylike*, and those formed from *baby* and *lady*, keep the *y.* The *y* is also retained in the possessive case of nouns, when formed by adding *s* with the apostrophe, as, *country's, everybody's.*

§ 14. Derivatives formed by affixing a termination to words ending in *y* preceded by a vowel, generally retain the *y* unchanged as, *gay, gayety, gayly; play, player, plays; sway, swayed; obey, obeying; joy, joyful; enjoy, enjoyed; buy, buying, gluey, glueyness*

The words *daily, laid, paid, said, saith, slain*, and *staid* (from *day, lay, pay, say, slay*, and *stay*), with their compounds, are exceptions *Staid*, however, is sometimes written *stayed. Gaiety* and *gaily* also occur. *Says* is regular in form, but not in pronunciation. *Dewiness* is a recognized exception. Derivatives from words ending in *uy*, as *colloquies*, from *colloquy*, are not exceptions to the rule, as *u*, in such cases, is not strictly a vowel, but stands for the consonant *w.*

§ 15. Derivatives formed by appending a syllable beginning with a vowel to words ending with a vowel sound, generally retain the letter or letters representing such sound as, *huzza, huzzaed; agree, agreeable, agreeing, weigh, weighing; dough, doughy, echo, echoed; woo, wooer; bow, bowed; beau, beauish* We sometimes see *cooes, wooes* (from the verbs *coo, woo*), but it is better to write *coos, woos*, with *taboos, shampoos*, and the like. Cf. *Hindoos*, etc., in § 18. *Cooed* and *wooed* are proper, like other participles in *-ed.*

Derivatives of words of this class ending in silent *e*, as also those formed from words ending in double *e* by adding a termination beginning with *e*, drop the final *e*: as, *hoe, hoed, sue, sued; owe, owed; free, freer, freest; see, seer; oversee, overseer, agree, agreed, agreer.* The cases mentioned in sections 11, 12, and 13 are also exceptions.

§ 16. Derivatives formed by prefixing one or more syllables to words ending in a double consonant commonly retain both consonants: as, *tipstaff, rebuff, recall, befall, inthrall, disinthrall, foretell, undersell, fulfill, enroll, emboss* (from *staff, buff, call, fall, thrall, tell, sell, fill, roll, boss*).

The word *until* is an exception, being always written with one *l.* Those words of this class which end in *ll* are written by some authors, especially in England, with one *l*; as, *recal, befal, inthral, foretel, fulfil, enrol.* The words *distill* and *instill* should be written with the *l* doubled, though they are often written *distil* and *instil*, with only one *l.*

§ 17. Compound words formed by joining two or more words commonly retain all the letters of the simple words; as, *stiff-necked, well-bred, dull-eyed, save-all, wide-mouthed.*

There are numerous exceptions to this rule, many of them compounds which by long use have acquired the force of single words. They are the following: namely, some compounds of *all* and *well*; as, *almighty, almost, alone, already, also, although, altogether, always, withal, therewithal, welcome, wherewithal, welfare*; — compounds of *mass*; as, *Candlemas, Christmas, Lammas, Michaelmas*, etc., — words of which the second part is the adjective *full*; as *artful, hateful, rueful, woeful* or *woful*; also, the words *chilblain, dumfound, expire* and its derivatives (cf. *inspire*), *fulfill* (see § 16), *namesake, neckerchief, numskull, pastime, standish, where'er*, and *wherever.*

§ 18. The plural of nouns regularly ends in *s*, or, in certain classes of words, in *es.*

When the noun in the singular ends with such a sound that the sound of *s* can unite with it, and be pronounced without forming a separate syllable, *s* only is added in forming the plural. as, *bay, bays; shah, shahs; sea, seas; tree, trees; pie, pies; Hindoo, Hindoos; woe, woes; canto, cantos, virtue, virtues; purlieu, purlieus; claw, claws; cab, cabs, panic, panics; bead, beads; chief, chiefs; bag, bags; path, paths; ache, aches; plaque, plaques, lock, locks; bell, bells; gem, gems; fan, fans; cup, cups; ear, ears; act, acts.* A few plurals from nouns ending in *o* preceded by a consonant, end in *es*: as, *echo, echoes; cargo, cargoes; embargo, embargoes; motto, mottoes, potato, potatoes.* Other nouns of this class generally form their plurals regularly, though usage differs with regard to some of them. Those in which final *o* is preceded by a vowel form their plurals regularly; as, *cameo, cameos; punctilio, punctilios.* The plural of *alkali* is written *alkalis* or *alkalies*; that of *rabbi*, either *rabbis* or *rabbies.* With regard to other nouns ending in *s* usage differs, though they are more properly written with the termination *es.*

When the noun in the singular ends with such a sound (as that of *ch* in *much, sh, j, s, z*, or *z*) that the sound of *s* can not unite with it in pronunciation, but must form a separate syllable, *e* is inserted before *s* in forming the plural, unless the word ends with silent *e*, in which case the latter serves to form a separate syllable with *s*: as, *church, churches; rush, rushes, age, ages; edge, edges, lace, laces; gas, gases; class, classes, alias, aliases, marquis, marquises, case, cases, loss, losses; box, boxes; maze, mazes.* For *classis, crisis*, and like words, see § 25.

To express the plural of a letter, figure, or any character or sign, or of a word mentioned without regard to its meaning, the letter *s*, generally preceded by the apostrophe, is appended, as in the phrases, "The two *l's* in *all*," "The two *0's* in *400*;" "Two *8's* in Orion," "The *why's* and *wherefore's* of the question" Some writers, however, omit the apostrophe in such cases, joining the *s* immediately to the letter, character, or word, as in the phrases "The two *ls* in *all*," "Two *8s* in Orion;" "The *pros* and *cons.*" Others still write the names of the letters with their proper plural endings, instead of the letters themselves; as, the two *ees, efs, ells, esses*, and the like. The plurals of letters are also rarely expressed by simply doubling them, without adding any plural sign, as, "The two *ee* in *bee*," "The two *ll* in *all*;" but this practice is not to be commended, as *ee, ll*, etc, are properly read *double e, double ll*, and the like.

§ 19. Nouns ending in *y* preceded by a consonant form their plural by adding *es* and changing *y* into *i*: as, *mercy, mercies, lady, ladies, sky, skies; army, armies; pity, pities.* This rule includes words ending in *quy*, in which *u*, being pronounced like *w*, is strictly a consonant, as, *colloquy, colloquies* The plural of proper nouns ending in *y* preceded by a consonant, is formed by changing *y* into *ies*, according to the rule; as, "The three *Maries*" Many good writers, however, form the plural of such words by simply adding *s*, as, "The three *Marys*"

When the singular of a noun ends in *y* preceded by a vowel (except *u* having the power of *w*), the plural is regularly formed by adding *s* only: as, *day, days, key, keys, money, moneys, monkey, monkeys, attorney, attorneys, alloy, alloys, guy, guys* Some plurals of the latter class are often, but less properly, written with the termination *ies*, as, *monies, attornies*, and the like.

NOTE — Nouns now ending in *y* formerly ended in *ie*, and formed their plurals regularly by adding *s*, as, *memorie, memories, mercie, mercies. Y* was finally substituted for *ie* in the singular, but the plural still retains its old form.

§ 20. The plurals of a few nouns ending in *f* or *fe* are irregularly formed by changing *f* or *fe* into *ves* The following words, with their compounds, are the principal examples namely, *life, lives; knife, knives, wife, wives; leaf, leaves; sheaf, sheaves; loaf, loaves, beef, beeves; thief, thieves, calf, calves; half, halves; elf, elves; shelf, shelves, self, selves; wolf, wolves.* The plural of *staff* is sometimes written *staffs*, but more commonly *staves*, except when it means a corps of officers, either military or civil, in which sense it is always written *staffs.* The plural of *wharf* is generally written *wharfs* in England, in the United States it is more commonly written *wharves*, as it is also by some recent English writers. The plural of *scarf* is *scarfs*, rarely *scarves.* The plurals of *hoof* and *turf*, formerly written *hooves* and *turves*, are now written *hoofs* and *turfs.* The plurals of other nouns ending in *f, fe*, or *ff*, are formed regularly by the addition of *s* only.

§ 21. In the following nouns, the singular and the plural differ in their vowels or vowel sounds namely, *man, men, woman, women, goose, geese, foot, feet, tooth, teeth, brother, brethren* (see §§ 22, 23), *louse, lice, mouse, mice.* Compounds ending with these words form their plurals in the same manner. as, *workman, workmen; dormouse, dormice.* Words which end in the syllable *-man*, and are not compounds, form their plurals regularly, by adding *s* only as, *cayman, caymans; desman, desmans; firman, firmans; talisman, talismans, German, Germans; Mussulman, Mussulmans; Ottoman, Ottomans; Turcoman, Turcomans.* The plurals of *talisman* and *Mussulman* are sometimes incorrectly written *talismen* and *Mussulmen*

§ 22. A few plurals end in *-en*: namely, *brother, brethren* (see §§ 21, 23), *child, children; ox, oxen.* To these may be added the obsolete forms, *eyen* or *eyne, kine, shoon, hosen, housen, sistren* (from *eye, cow, shoe, hose, house, sister*), all of which, though some have received a slightly different form, end, as pronounced, with the sound of *n.*

§ 23. The words *brother, die, pea*, and *penny*, have each two plurals of different forms and with different significations: as, *brothers*, male children of the same parent, also members of the same society, association, class, or profession; *brethren*, members of the same religious or ecclesiastical body, the word in this form being rarely used except in connection with religion, or in scriptural language, where it also has the same meaning that *brother* has in ordinary language: *dies*, implements for making impressions by stamping, or for making screws, also the cubical parts of pedestals; *dice*, the cubical blocks used in games of chance: *peas*, seeds of the pea-plant, when a definite number is mentioned, *pease*, the same in bulk, or spoken of collectively: *pennies*, the coins, especially when a definite number is mentioned; *pence*, the amount reckoned by these coins. See also these words in the Dictionary. For *acquaintance*, as formerly both singular and plural, see ACQUAINTANCE, *n.*, 2, in the Dictionary.

§ 24. A few words, mostly names of animals, have the same form in the plural as in the singular; as, *deer*, *sheep*, *swine*, *grouse*, *trout*, and the like. This is true also of gentile nouns in *-ese*; as, *Chinese*, *Portuguese*, *Tyrolese*, *Japanese*. *Fish*, *fowl*, and some other words, may be used for an indefinite number; or the individuals may be designated as *fishes*, etc.

§ 25. Many words adopted from foreign languages retain their original plurals: as, *datum*, *data*; *criterion*, *criteria*; *genus*, *genera*; *larva*, *larvæ*; *classis*, *classes* (see *class*, pl. *classes*, in § 18), *crisis*, *crises*; *matrix*, *matrices*; *focus*, *foci*; *monsieur*, *messieurs*.

Many words of this class, while retaining the original plurals, have also a second, formed after the analogy of English words of similar termination: as, *formula*, *formulæ* or *formulas*; *beau*, *beaux* or *beaus*; *focus*, *foci* or *focuses*; *index*, *indices* or *indexes*; *stratum*, *strata* or *stratums*; *bandit*, *banditti* or *bandits*; *cherub*, *cherubim* or *cherubs*; *seraph*, *seraphim* or *seraphs*. The plurals of the last two words are sometimes incorrectly written *cherubims* and *seraphims*, with double plural terminations, without regard to the fact that in Hebrew words *-im* is a plural ending.

§ 26. In certain loose compounds consisting of a noun followed by an adjective or other qualifying expression, the plural is commonly formed by making the same change in the noun as when it stands alone: as, *court-martial*, *courts-martial*; *cousin-german*, *cousins-german*; *son-in-law*, *sons-in-law*. When, however, the adjective is so closely joined to the noun that the compound has the force of a simple word, the plural of the compound is commonly formed like that of any other word of the same termination: as, *cupful*, *cupfuls*; *handful*, *handfuls*.

§ 27. There are many words, besides those mentioned in the preceding paragraphs, in respect to which usage, even that of the best authors, is variable. The most important of these words are mentioned in this and the succeeding sections.

The derivatives of the word *villain*, as *villainous*, *villainy*, etc., though often written *villanous*, *villany*, etc., properly retain the *i*, according to the practice of many writers, like those of other words similarly ending in *ain*: as, *mountainous*, from *mountain*; *captaincy*, from *captain*; and the like.

The words *connection*, *deflection*, *inflection*, and *reflection*, follow the spelling of the words *connect*, *deflect*, *inflect*, and *reflect*, though often written, especially in England, *connexion*, *deflexion*, *inflexion*, and *reflexion*. See Note under CONNECTION, in the Dictionary.

The word *woe*, though often written without the final *e*, should retain it, like most other nouns of one syllable and of similar form; as, *doe*, *floe*, *foe*, *hoe*, *sloe*, *toe*, and the like. Monosyllables other than nouns, and words of more than one syllable, having a similar termination, omit the *e*; as, *do*, *go*, *no*, *so*, *canto*, *motto*, *potato*.

The words *defense*, *expense*, *offense*, and *pretense* are properly written thus, though often spelled with *c* instead of *s*, for the *s* belongs to the words from which they are derived, and is also used in all their derivatives. See Note under OFFENSE, in the Dictionary.

The words *drought* and *height* were formerly written *drouth* and *hight*, and are still often thus written in America. See DROUTH, in the Dictionary.

The verb *practice* is thus written like the noun, in preference to the form *practise*, though the latter spelling is used by many writers, especially in England. The difference in spelling between the noun and the verb is properly observed, in words of this kind, only in such as are accented on the last syllable, as *device*, *devise*. See Note under PRACTISE, in the Dictionary.

Derivatives of the Greek ἕδρα (seat, base, side; pronounced *hĕd'rȧ*), as *polyhedron*, *tetrahedron*, *octahedral*, and the like, are properly thus written with *h* before the *e* of the termination, but are sometimes written *polyedron*, *tetraedron*, *octaedral*, etc., without the *h*.

§ 28. There is a class of adjectives ending either in *-able* or in *-ible*, of which a large majority have the termination *-able*; as, *blamable*, *laudable*, *legible*, *mutable*, *navigable*, *vendible*. Many of them are from Latin words ending in *-abilis* or *-ibilis*, some are from the French; and not a few are formed by adding the termination to English words. Those from Latin words end respectively in *-able* or *-ible*, according as they are derived from words ending in *-abilis* or *-ibilis*. as, *mutable* (L. *mutabilis*); *potable* (L. *potabilis*); *credible* (L. *credibilis*); *vendible* (L. *vendibilis*). Those formed from English words generally end in *-able*, as, *avoidable*, *eatable*, *fordable*, *laughable*, *liable*, *salable*, *serviceable*. There are a few words respecting which usage is variable: as, *addible* or *addable*; *conversable* or *conversible*; *inferable* or *inferrible*; *referable* or *referrible*.

§ 29. There is a class of words beginning with *en-* or *in-*, as *enclose* or *inclose*, *enquire* or *inquire*, *ensure* or *insure*, and the like, many of which take either form of the prefix indifferently. They are chiefly derived from the Latin, either directly or through the French, the prefix *in-* belonging to the former language, and *en-* to the latter. In some of these words, *en-* is to be preferred; in others, *in-*; in many of them, either may be used indifferently. See the List of Words Spelled in Two or More Ways, and the different words of this class in the Dictionary.

§ 30. There was formerly considerable diversity of usage in respect to the terminations *-ant* and *-ent*, both of which were, in certain cases, used almost indifferently; as in the words *confidant* or *confident*, *dependant* or *dependent*, and the like. Present usage, however, is definitely settled in favor of one or the other form, in nearly or quite every word of this class, though not always upon uniform principles. Thus, the abstract noun *confidence* and the adjective *confident* are universal, while the common noun is sometimes the English *confident*, but often the French *confidant*. The abstract noun *dependence* and the adjective *dependent* have almost entirely superseded *dependance* and *dependant*, while the noun *dependant*, which was at least as commonly seen in Walker's time as the noun *dependent*, has now yielded its place in great measure to *dependent* (see Note under DEPENDANT, in the Dictionary). On the other hand, we now have both the adjectives and the common nouns *attendant* and *repentant*; and the abstract nouns *attendance* and *repentance*. It may be remarked that the terminations *-ant* and *-ance* belong properly to words derived from the French or from Latin verbs of the first conjugation; *-ent* and *-ence* to words derived from Latin verbs of the other three conjugations. *-ence* and *-ance* were also formerly confounded in some words, the one or the other being used indifferently.

§ 31. There is a class of words ending in *-er*, some of which are written by most authors with the termination *-re*; as, *center*, *meter*, *theater*, etc., which are often written *centre*, *metre*, *theatre*, etc. *Acre*, *chancre*, *lucre*, *nacre*, *massacre*, and *ogre* retain the termination *-re*, in order to preserve the hard sound of the *c* and *g*. Still, we have the adjective *eager*, the noun *eagre* or *eager*, and the preposition *mauger* or *maugre*.

§ 32. There are two classes of chemical words ending respectively in *-id* or *-ide* and *-in* or *-ine*, in regard to which usage has varied. Most of them were formerly written without the final *e*; but in present usage *-ide* is preferred to *-id*, and there is an attempt to establish a technical distinction between *-in* and *-ine*. See *-INE* in the Dictionary (cf. § 104, *Guide to Pronunciation*). The word *tannin* is always written without the final *e*. *Oxide* is now generally written with the termination *-ide*. See Note under OXIDE, in the Dictionary.

§ 33. There is a class of words ending, as pronounced, with the sound of long *i*, followed by *z*, some of which are differently written, by different authors, with either *-ize* or *-ise* to represent this sound: as, *criticise* or *criticize*; *civilize* or *civilise*; *naturalize* or *naturalise*, *patronize* or *patronise*. These words are mostly verbs, and are chiefly derived from Greek words ending in *-ιζω* (see *-IZE*, in the Dictionary), or from French words ending in *-iser* or *-ise*. There are a few from other sources, but formed in analogy with those derived from these languages. Those formed from Greek words properly have the termination *-ize*; as, *anathematize*, *baptize*, *characterize*, *dramatize*, *tantalize*. The spellings *catechise*, *criticise*, *exorcise*, are, however, in common use, but *catechize* and *criticize* are also allowed. Those formed in an analogous manner from English words are likewise written with *-ize*; as, *albumenize*, *bastardize*, *memorize*, *sensitize*. But those derived from the French verb *prendre* (participle *pris* or *prise*) end in *-ise*; as, *apprise*, *comprise*, *emprise*, *enterprise*, *surprise*. The following are the principal English verbs ending in *-ise*; namely, *advertise*, *advise*, *affranchise*, *apprise*, *arise*, *catechise*, *chastise*, *circumcise*, *comprise*, *compromise*, *criticise*, *demise*, *despise*, *devise*, *disenfranchise*, *disfranchise*, *disguise*, *emprise*, *enfranchise*, *exercise*, *exorcise*, *franchise*, *merchandise*, *premise*, *revise*, *supervise*, *surmise*, *surprise*. It may be remarked that most of those in respect to which usage varies are more frequently written in England with the termination *-ise*, and in the United States with the termination *-ize*.

§ 34. The words *mold* and *molt*, and their compounds and derivatives, are written in this Dictionary with *o* instead of *ou*, in analogy with the words *bold*, *bolt*, *colt*, *gold*, etc., from which the *u* has been dropped. Most authors, however, write these words *mould* and *moult*, and their derivatives in like manner; and this spelling is also given in this Dictionary as alternative.

§ 35. There is a numerous class of words almost universally written in the United States with the termination *-or*, many of which are written in England with the termination *-our*; as, *candor*, *favor*, *honor*, *labor*, *rumor*, *vigor*. English usage, however, is not uniform with respect to these words, many of them being written with *-or* in English books. See the Observations on Orthography, prefixed to these rules.

§ 36. There is a small class of words ending with the syllable *-ped* (from Lat. *pes*, *pedis*, foot), the termination of some of which was formerly, and is still frequently, written *-pede*; as, *biped*, *centiped*, *milliped*, *palmiped*, *quadruped*, *solliped*, and the like. The words *biped* and *quadruped* are universally written without the final *e*; and most of the others, according to the best usage, should be written in the same manner. *Centipede*, however, is frequent; and *velocipede* is practically the only form in use.

A LIST OF WORDS SPELLED IN TWO OR MORE WAYS.

The design of the following List is, in the first place, to present those words in reference to which *present* usage, in the United States or in England, sanctions more than one method of spelling the same word; and, secondly, a considerable number of words, which, though not differently spelled by living reputable writers, yet are to be found in the orthography of the second column in the works of respectable authors of the last century, or the early part of the present century, and are, therefore, often presented to the eye of the modern reader. Such a list, it is thought, will be found very convenient for consultation. For anything more full, a Glossary would be the appropriate resort. The first column, in the following List, presents the orthography recognized in the body of this Dictionary as the preferable one, or that in general use; the second column, one less desirable, or the usage of former times. Those forms in the second column which a good writer at the present day would not probably employ, but which are found only in writings of the past, have a dagger [†] prefixed. One class of words which might properly have been added, is, from their great number, omitted. It is that of words of more than one syllable ending in *re* or *re*, as, *music*, *musick*, *public*, *publick*, etc. It is deemed sufficient to mention the class, and to state that the termination in *ck* is wholly disused. A similar remark is applicable to a portion of the words terminating formerly in *our*, now in *or*. Those of this class in the following List, in which both forms are given, are still sometimes used in both forms, the termination in *or* being that most favored in the United States, while *our* is the form generally preferred in England. Words of this class not given in the List are used only in *or* by living writers. Subject to a like remark is a class of words terminating in *-ize* or *-ise*; as, *systematize* or *systematise*, etc., — the former mode, according to which such words are spelled in America, being in accordance with their etymology, and the latter that affected by English printers. When in this List the word in the first column is followed by *or*, as, "Abatis, *or* Abattis," it is implied that the second form is nearly, often quite, in as good use as the first.

EXPLANATORY NOTES.

*** In the vocabulary, words from foreign languages, both ancient and modern, which have not become anglicized, are printed with two bars before them, as, ‖ **Aard'-vark'**, ‖ **A'ban'don'**, ‖ **Ao'a-ri'na**.

*** Words which are to be written or printed with a hyphen between their components have this hyphen indicated by a mark longer and heavier than the short light hyphen used to indicate the division between unaccented syllables, as, **A'ble-bod'ied**; **Aus'tro-Hun-ga'ri-an**, **E-lec'tro-bi-ol'o-gy**.

*** Part of a word is often omitted in the respelling for pronunciation when this omission can be readily supplied from a near word, usually the next preceding word, which has this part pronounced. The well-known suffixes **-bly**, **-ed** (when not contracted), **-ess**, **-est**, **-ing**, **-ish**, **-ist**, **-less**, **-ly**, **-ness**, and **-ship**, are not usually respelled. See **De'vi-a'tion** and **Hu'mor-ous-ly**, whose full respelling would be (dē'vĭ-ā'shŭn) and (hū'mĕr-ŭs-lȳ *or* ū'mĕr-ŭs-lȳ).

*** The figures in connection with the respelling refer to sections in the Guide to Pronunciation, pp. lv-lxxxviii.

*** The sign √ prefixed to a number in the etymologies refers to the same number in the list of Indo-Germanic Roots, pp. xlvii-liii.

*** For plurals which are not given, see the Rules for Spelling under Orthography, §§ 18–26, pp. xc-xcii.

*** Where reference is made to an illustration in the Appendix — "See *Illust.* in Append."—such illustration will be found there under its proper head. (See *Index*, p. vi.)

*** When instead of, or in addition to, a definition, there is a reference, introduced by *See*, to another word, the word referred to is the one usually preferred.

*** It will be observed that the *hyphen* is less frequently used than in former editions. Some words which are not infrequently so connected are given as continuous words, others as phrases. The hyphen in compounds seems to make the component words visibly distinct. The practice of lexicographers, authors, and printers is so various in this matter that in a multitude of instances it is hypercritical or whimsical to pronounce dogmatically that either the use or the omission of the hyphen is the only correct form. The general principle followed in this work is to refrain from using the hyphen, (1) when the words have the same meaning in unconnected succession as when joined, and (2) when the compound may have the form of a continuous word without confusing the eye. But this principle, however reasonable, can not be rigidly applied, because good usage, which must be respected, does not invariably conform to it.

A

DICTIONARY

OF

THE ENGLISH LANGUAGE.

A

A (*named* ā *in the English, and most commonly* ă *in other languages*). The first letter of the English and of many other alphabets. The capital A of the alphabets of Middle and Western Europe, as also the small letter (a), besides the forms in Italic, black letter, etc , are all descended from the old Latin A, which was borrowed from the Greek *Alpha*, of the same form , and this was made from the first letter (ℵ) of the Phœnician alphabet, the equivalent of the Hebrew *Aleph*, and itself of Egyptian origin. The *Aleph* was a consonant letter, with a guttural breath sound that was not an element of Greek articulation , and the Greeks took it to represent their vowel *Alpha* with the ă sound, the Phœnician alphabet having no vowel symbols

This letter, in English, is used for several different vowel sounds. See *Guide to Pronunciation*, §§ 43-74 The regular long *a*, as in *fate*, etc , is a comparatively modern sound, and has taken the place of what, till about the early part of the 17th century, was a sound of the quality of ä (*a* in *far*).

2. (*Mus*) The name of the sixth tone in the model major scale (that in C), or of the first tone of the minor scale, which is named after it the scale in A minor The second string of the violin is tuned to the A in the treble staff. — **A sharp** (A♯) is the name of a musical tone intermediate between A and B — **A flat** (A♭) is the name of a tone intermediate between A and G.

A per se (L. *per se* by itself), one preeminent , a nonesuch. [*Obs*]

> O fair Cresëide, the flower and *A per se*
> Of Troy and Greece *Chaucer*

A (ā, *emph* ā) **1** [Shortened form of *an*. AS *ān* one See ONE] An adjective, commonly called the indefinite article, and signifying *one* or *any*, but less emphatically. "At *a* birth ," "In *a* word ," "At *a* blow " *Shak* It is placed before nouns of the singular number denoting an individual object, or a quality individualized, before collective nouns, and also before plural nouns when the adjective *few* or the phrase *great many* or *good many* is interposed , as, *a* dog, *a* house, *a* man , *a* color ; *a* sweetness , *a* hundred, *a* fleet, *a* regiment , *a* few persons, *a* great many days. It is used for *an*, for the sake of euphony, before words beginning with a consonant sound [for exception of certain words beginning with h, see AN]; as, *a* table, *a* woman, *a* year, *a* unit, *a* eulogy, *a* ewe, *a* oneness, such *a* one, etc Formerly *an* was used both before vowels and consonants.

2. [Originally the preposition *a* (*an*, *on*)] In each , to or for each ; as, "twenty leagues *a* day," "a hundred pounds *a* year," "a dollar *a* yard," etc

A (ȧ), *prep.* [Abbreviated form of *an* (AS *on*) See ON] **1.** In , on , at , by. [*Obs*] "*A* God's name " "Torn *a* pieces " "Stand *a* tiptoe." "*A* Sundays " *Shak.* "Wit that men have now *a* days " *Chaucer.* "Set them *a* work." *Robynson* (*More's Utopia*)

2. In process of , in the act of ; into , to , — used with verbal substantives in *-ing* which begin with a consonant This is a shortened form of the preposition *an* (which was used before the vowel sound), as in *a* hunting, *a* building, *a* begging "Jacob, when he was *a* dying " *Heb.* xi. 21. "We 'll *a* birding together " "It was *a* doing." *Shak* "He burst out *a* laughing " *Macaulay* The hyphen may be used to connect *a* with the verbal substantive (as, *a*-hunting, *a*-building) or the words may be written separately This form of expression is now for the most part obsolete, the *a* being omitted and the verbal substantive t..sted as a participle.

A. [From AS. *of* off, from. See OF] Of [*Obs*]

> "The name of John *a* Gaunt " "What time *a* day is it?" *Shak.* "It 's six *a* clock." *B Jonson.*

A. A barbarous corruption of *have*, of *he*, and sometimes of *it* ! of *they*. "So would I *a* done " "*A* brushes his hat." *Shak.*

A. An expletive, void of sense, to fill up the meter

> A merry heart goes all the day,
> Your sad tires in a mile-*a*. *Shak*

A-. A, as a prefix to English words, is derived from various sources (1) It frequently signifies *on* or *in* (from *an*, *a*, forms of AS *on*), denoting a state, as in *a*foot, on foot, *a*bed, *a*miss, *a*sleep, *a*ground, *a*loft, *a*way (AS *onweg*), and analogically, *a*blaze, *a*tremble, etc. (2) AS *of* off, from, as in *a*down (AS *ofdūne* off the *dun* or hill) (3) AS *ā-* (Goth. *us-*, *ur-*, Ger. *er-*), usually giving an intensive force, and sometimes the sense of *away*, *on*, *back*, as in *a*rise, *a*bide, *a*go. (4) Old English *y-* or *i-* (corrupted from the AS inseparable particle *ge-*, cognate with OHG *ga-*, *gi* , Goth. *ga-*), which, as a prefix, made no essential addition to the meaning, as in *a*ware (5) French *à* (L *ad* to), as in *a*base, *a*chieve. (6) L. *a*, *ab*, *abs*, from, as in *a*vert (7) Greek insep. prefix *ἀ* without, or privative, not, as in *a*byss, *a*theist , akin to E *un-*.

Besides these, there are other sources from which the prefix *a* takes its origin.

2. To banish, to expel [*Obs.*] *Mir for Mag.*

A-ban'don (ă-băn'dŭn), *v. t.* [*imp. & p. p.* ABANDONED (-dŭnd), *p. pr. & vb. n.* ABANDONING.] [OF *abandoner*, F. *abandonner*, *a* (L. *ad*) + *bandon* permission, authority, LL. *bandum*, *bannum*, public proclamation, interdiction, *bannire* to proclaim, summon of Germanic origin; cf. Goth. *bandwjan* to show by signs, to designate, OHG. *ban* proclamation. The word meant to proclaim, put under a ban, put under control, hence, as in OE., to compel, subject, or to leave in the control of another, and hence, to give up. See BAN.] **1.** To cast or drive out, to banish, to expel, to reject. [*Obs.*]

That he might . . *abandon* them from him *Udall.*
Being all this time *abandoned* from your bed *Shak.*

2 To give up absolutely, to forsake entirely; to renounce utterly, to relinquish all connection with or concern in; to desert, as a person to whom one owes allegiance or fidelity, to quit; to surrender.

Hope was overthrown, yet could not be *abandoned* *I Taylor*

3. Reflexively: To give (one's self) up without attempt at self-control; to yield (one's self) unrestrainedly, — often in a bad sense.

He *abandoned* himself . . to his favorite vice *Macaulay*

4. (*Mar. Law*) To relinquish all claim to, — used when an insured person gives up to underwriters all claim to the property covered by a policy, which may remain after loss or damage by a peril insured against

Syn. — To give up, yield; forego; cede; surrender; resign; abdicate; quit, relinquish, renounce, desert; forsake; leave, retire, withdraw from. — To ABANDON, DESERT, FORSAKE. These words agree in representing a person as *giving up* or *leaving* some object, but differ as to the mode of doing it. The distinctive sense of *abandon* is that of giving up a thing absolutely and finally, as, to *abandon* one's friends, places, opinions, good or evil habits, a hopeless enterprise, a shipwrecked vessel. *Abandon* is more widely applicable than *forsake* or *desert*. The Latin original of *desert* appears to have been originally applied to the case of deserters from military service. Hence, the verb, when used of *persons* in the active voice, has usually or always a bad sense, implying some breach of fidelity, honor, etc., the leaving of something which the person should rightfully stand by and support; as, to *desert* one's colors, to *desert* one's post, to *desert* one's principles or duty. When used in the passive, the sense is not necessarily bad; as, the fields were *deserted*, a *deserted* village, *deserted* halls. *Forsake* implies the breaking off of previous habit, association, personal connection, or that the thing left had been familiar or frequented, as, to *forsake* old friends, to *forsake* the paths of rectitude, the blood *forsook* his cheeks. It may be used either in a good or in a bad sense

A-ban'don, *n.* [F. *abandon*, fr. *abandonner*. See ABANDON, *v.*] Abandonment, relinquishment [*Obs.*]

A'ban'don' (ă'băn'dŏn'), *n.* [F. See ABANDON.] A complete giving up to natural impulses, freedom from artificial constraint, careless freedom or ease.

A-ban'doned (ă-băn'dŭnd), *a.* **1.** Forsaken, deserted. "Your *abandoned* streams" *Thomson.*

2. Self-abandoned, or given up to vice, extremely wicked, or sinning without restraint; irreclaimably wicked; as, an *abandoned* villain.

Syn. — Profligate; dissolute, corrupt; vicious, depraved; reprobate; wicked, unprincipled, graceless, vile. — ABANDONED, PROFLIGATE, REPROBATE. These adjectives agree in expressing the idea of great personal depravity. *Profligate* has reference to open and shameless immoralities, either in private life or political conduct; as, a *profligate* court, a *profligate* ministry. *Abandoned* is stronger, and has reference to the searing of conscience and hardening of heart produced by a man's giving himself wholly up to iniquity, as, a man of *abandoned* character. *Reprobate* describes the condition of one who has become insensible to reproof, and who is morally abandoned and lost beyond hope of recovery

God gave them over to a *reprobate* mind. *Rom* i 28.

A-ban'doned-ly, *adv.* Unrestrainedly

A-ban'don-ee' (ă-băn'dŭn-ē'), *n.* (*Law*) One to whom anything is legally abandoned.

A-ban'don-er (ă-băn'dŭn-ẽr), *n.* One who abandons *Beau & Fl*

A-ban'don-ment (-ment), *n.* [Cf. F. *abandonnement*.] **1** The act of abandoning, or the state of being abandoned; total desertion, relinquishment.

Ab'ar-tic'u-la'tion (ăb'ăr-tĭk'ū-lā'shŭn), *n.* [L. *ab* + E. *articulation* of F. *abarticulation*. See ARTICLE.] (*Anat.*) Articulation, usually that kind of articulation which admits of free motion in the joint, diarthrosis. *Coxe.*

A-base' (ă-bās'), *v. t.* [*imp. & p. p.* ABASED (ă-bāst'), *p. pr. & vb. n.* ABASING.] [F. *abaisser*, LL. *abassare*, *abbassare*, *ad* + *bassare*, fr. *bassus* low. See BASE, *a.*]

1 To lower or depress, to throw or cast down, as, to *abase* the eye [*Archaic*] *Bacon.*

Saying so, he *abased* his lance. *Shelton*

2. To cast down or reduce low or lower, as in rank, office, condition in life, or estimation of worthiness, to depress; to humble, to degrade.

Whosoever exalteth himself shall be *abased* *Luke* xiv 11.

Syn. — To ABASE, DEBASE, DEGRADE. These words agree in the idea of bringing down from a higher to a lower state. *Abase* has reference to a bringing down in condition or feelings; as, to *abase* the proud, to *abase* one's self before God. *Debase* has reference to the bringing down of a thing in purity, or *making it base* It is, therefore, always used in a bad sense, as, to *debase* the coin of the kingdom, to *debase* the mind by vicious indulgence, to *debase* one's style by coarse or vulgar expressions. *Degrade* has reference to a bringing down from some higher *grade* or from some standard. Thus, a priest is *degraded* from the clerical office When used in a moral sense, it denotes a bringing down in character and just estimation, as, *degraded* by intemperance, a *degrading* employment, etc "Art is *degraded* when it is regarded only as a trade."

A-based' (ă-bāst'), *a.* **1** Lowered, humbled.

2. (*Her.*) [F. *abaissé*.] Borne lower than usual, as a fess; also, having the ends of the wings turned downward towards the point of the shield.

A-bas'er (ă-bās'ẽr), *n.* He who, or that which, abases

A-bash' (ă-băsh'), *v. t.* [*imp. & p. p.* ABASHED (ă-băsht'), *p. pr. & vb. n.* ABASHING.] [OE. *abaisshen*, *abasshen*, *abashen*, OF. *esbahir*, F. *ébahir*, to astonish, fr. L. *ex* + the interjection *bah*, expressing astonishment. In OE. somewhat confused with *abase*. Cf. FINISH.] To destroy the self-possession of; to confuse or confound, as by exciting suddenly a consciousness of guilt, mistake, or inferiority, to put to shame; to disconcert, to discomfit.

Abashed, the devil stood,
And felt how awful goodness is *Milton.*

He was a man whom no check could *abash* *Macaulay*

Syn. To confuse; confound; disconcert, shame. — To ABASH, CONFUSE, CONFOUND. *Abash* is a stronger word than *confuse*, but not so strong as *confound*. We are *abashed* when struck either with sudden shame or with a humbling sense of inferiority, as, Peter was *abashed* by the look of his Master So a modest youth is *abashed* in the presence of those who are greatly his superiors We are *confused* when, from some unexpected or startling occurrence, we lose clearness of thought and self-possession. Thus, a witness is often *confused* by a severe cross-examination, a timid person is apt to be *confused* in entering a room full of strangers. We are *confounded* when our minds are overwhelmed, as it were, by something wholly unexpected, amazing, dreadful, etc., so that we have nothing to say. Thus, a criminal is usually *confounded* at the discovery of his guilt.

Satan stood
Awhile as mute, *confounded* what to say *Milton*

A-bash'ed-ly (ă-băsh'ĕd-lĭ), *adv.* In an abashed manner

6. (*Law*) (*a*) To bring entirely down or put an end to, to do away with; as, to *abate* a nuisance, to *abate* a writ. (*b*) (*Eng. Law*) To diminish, to reduce. Legacies are liable to be *abated* entirely or in proportion, upon a deficiency of assets.

To abate a tax, to remit it either wholly or in part

A-bate' (ă-bāt'), *v. i.* [See ABATE, *v. t.*] **1.** To decrease, or become less in strength or violence; as, pain *abates*, a storm *abates*.

The fury of Glengarry . . . rapidly *abated*. *Macaulay.*

2. To be defeated, or come to naught; to fall through; to fail; as, a writ *abates*.

To abate into a freehold, To abate in lands (*Law*), to enter into a freehold after the death of the last possessor, and before the heir takes possession. See ABATEMENT, 4.

Syn. — To subside, decrease; intermit; decline; diminish, lessen. — To ABATE, SUBSIDE. These words, as here compared, imply a coming down from some previously raised or excited state. *Abate* expresses this in respect to degrees, and implies a diminution of force or of intensity; as, the storm *abates*, the cold *abates*, the force of the wind *abates*, or, the wind *abates*, a fever *abates*. *Subside* (to settle down) has reference to a previous state of agitation or commotion; as, the waves *subside* after a storm, the wind *subsides* into a calm. When the words are used figuratively, the same distinction should be observed. If we conceive of a thing as having different degrees of intensity or strength, the word to be used is *abate*. Thus we say, a man's anger *abates*, the ardor of one's love *abates*, "Winter's rage *abates*." But if the image be that of a sinking down into quiet from preceding excitement or commotion, the word to be used is *subside*; as, the tumult of the people *subsides*, the public mind *subsided* into a calm. The same is the case with those emotions which are tumultuous in their nature; as, his passion *subsides*, his joy quickly *subsided*, his grief *subsided* into a pleasing melancholy. Yet if, in such cases, we were thinking of the degree of violence of the emotion, we might use *abate*, as, his joy will *abate* in the progress of time, and so in other instances.

A-bate' (ă-bāt'), *n.* Abatement. [*Obs.*] *Sir T. Browne.*

A-bate'ment (-ment), *n* [OF. *abatement*, F. *abattement*.] **1.** The act of abating, or the state of being abated; a lessening, diminution, or reduction; removal or putting an end to, as, the *abatement* of a nuisance is the suppression thereof

2 The amount abated, that which is taken away by way of reduction, deduction, decrease; a rebate or discount allowed

3. (*Her.*) A mark of dishonor on an escutcheon.

4 (*Law*) The entry of a stranger, without right, into a freehold after the death of the last possessor, before the heir or devisee. *Blackstone.*

Natural *abilities* are like natural plants, that need pruning by study *Bacon*

The public men of England, with much of a peculiar kind of *ability* *Macaulay*

Syn. — Capacity, talent; cleverness; faculty, capability; efficiency; aptitude, aptness, address, dexterity, skill. — Ability, Capacity. These words come into comparison when applied to the higher intellectual powers. *Ability* has reference to the *active* exercise of our faculties. It implies not only native vigor of mind, but that ease and promptitude of execution which arise from mental training Thus, we speak of the *ability* with which a book is written, an argument maintained, a negotiation carried on, etc. It always supposes something to be *done*, and the power of *doing* it *Capacity* has reference to the *receptive* powers In its higher exercises it supposes great quickness of apprehension and breadth of intellect, with an uncommon aptitude for acquiring and retaining knowledge. Hence it carries with it the idea of *resources* and undeveloped power. Thus we speak of the extraordinary *capacity* of such men as Lord Bacon, Blaise Pascal, and Edmund Burke. "*Capacity*," says H. Taylor, "is requisite to devise, and *ability* to execute, a great enterprise" The word *abilities*, in the plural, embraces both these qualities, and denotes high mental endowments.

Ab-scind' (Ab-sInd'), *v. t* [L *abscindere*, *ab* + *scindere* to rend, cut. See Schism.] To cut off. [*R.*] "Two syllables . . . *abscinded* from the rest." *Johnson.*

Ab-sci'sion (-sĭzh'ŭn), *n* [L *abscisio*] See Abscission

Ab'sciss (Ab'sĭs), *n.*; *pl.* Abscisses (-ĕz). See Abscissa

Ab-scis'sa (Ab-sĭs'sâ), *n*, E *pl* Abscissæ, L *pl* Abscissæ. [L., fem. of *abscissus*, p. p. of *abscindere* to cut off. See Abscind.] (*Geom.*) One of the elements of reference by which a point, as of a curve, is referred to a system of fixed rectilineal coordinate axes. When referred to two intersecting axes, one of them called the axis of abscissas, or of X, and the other the axis of ordinates, or of Y, the *abscissa* of the point is the distance cut off from the axis of X by a line drawn through it and parallel to the axis of Y. When a point in space is referred to three axes having a common intersection, the *abscissa* may be the distance measured parallel to either of them, from the point to the plane of the other two axes. Abscissas and ordinates taken together are called coordinates — OX or PY is the *abscissa* of the point P of the curve, OY or PX its ordinate, the intersecting lines OX and OY being the axes of abscissas and ordinates respectively, and the point O their origin

Ab-scis'sion (Ab-sĭzh'ŭn), *n.* [L. *abscissio* See Abscind.] **1** The act or process of cutting off. "Not to be cured without the *abscission* of a member" *Jer Taylor.*

2. The state of being cut off *Sir T. Browne*

3. (*Rhet*) A figure of speech employed when a speaker having begun to say a thing stops abruptly. thus, "He is a man of so much honor and candor, and of such generosity — but I need say no more"

Ab-scond' (Ab-skŏnd'), *v. i* [*imp & p p* Absconded, *p pr. & vb n.* Absconding] [L *absconderc* to hide, *ab, abs* + *condere* to lay up; *con* + *dĕre* (only in comp) to put. Cf. Do.] **1.** To hide, withdraw, or be concealed.

The marmot *absconds* all winter *Ray*

2. To depart clandestinely; to steal off and secrete one's self,—used especially of persons who withdraw to avoid a legal process, as, an *absconding* debtor

That very homesickness which, in regular armies, drives so many recruits to *abscond* *Macaulay*

So *absolute* she seems,
And in herself complete *Milton*

3 Viewed apart from modifying influences or without comparison with other objects, actual, real,—opposed to *relative* and *comparative*, as, *absolute* motion; *absolute* time or space.

Absolute rights and duties are such as pertain to man in a state of nature as contradistinguished from *relative* rights and duties, or such as pertain to him in his social relations

4 Loosed from, or unconnected by, dependence on any other being, self-existent, self-sufficing

☞ In this sense God is called *the Absolute* by the Theist. The term is also applied by the Pantheist to the universe, or the total of all existence, as only capable of relations in its parts to each other and to the whole, and as dependent for its existence and its phenomena on its mutually depending forces and their laws

5 Capable of being thought or conceived by itself alone, unconditioned, non-relative.

☞ It is in dispute among philosophers whether the term, in this sense, is not applied to a mere logical fiction or abstraction, or whether *the absolute*, as thus defined, can be known, as a reality, by the human intellect.

To Cusa we can indeed articulately trace, word and thing, the recent philosophy of *the absolute* *Sir W Hamilton*

6 Positive, clear, certain, not doubtful. [*R.*]

I am *absolute* 'twas very Cloten *Shak*

The young stranger had been *abstracted* and silent *Blackw Mag*

3. To separate, as ideas, by the operation of the mind, to consider by itself, to contemplate separately, as a quality or attribute. *Whately*

4 To epitomize; to abridge *Franklin.*

5. To take secretly or dishonestly; to purloin, as, to *abstract* goods from a parcel, or money from a till

Von Rosen had quietly *abstracted* the bearing-reins from the harness *W Black.*

6. (*Chem.*) To separate, as the more volatile or solu-ble parts of a substance, by distillation or other chem-ical processes. In this sense *extract* is now more gener-ally used

Ab-stract', *v i* To perform the process of abstrac-tion. [*R.*]

I own myself able to *abstract* in one sense *Berkeley*

Ab'stract' (ăb'străkt'), *n.* [See ABSTRACT, *a*] **1** That which comprises or concentrates in itself the essential qualities of a larger thing or of several things. Specif-ically, A summary or an epitome, as of a treatise or book, or of a statement; a brief.

An *abstract* of every treatise he had read *Watts.*

Man, the *abstract*
Of all perfection, which the workmanship
Of Heaven hath modeled. *Ford*

2. A state of separation from other things; as, to con-sider a subject in the *abstract*, or apart from other asso-ciated things.

3. An abstract term.

The concretes "father" and "son" have, or might have, the *abstracts* "paternity" and "filiety." *J. S. Mill.*

4. (*Med.*) A powdered solid extract of a vegetable sub-stance mixed with sugar of milk in such proportion that one part of the abstract represents two parts of the orig-inal substance.

Ab-strac'tion (ăb-străk'shŭn), *n.* [Cf F. *abstraction.* See ABSTRACT, *a*] **1** The act of abstracting, separating, or withdrawing, or the state of being withdrawn; with-drawal.

A wrongful *abstraction* of wealth from certain members of the community *J S. Mill.*

2. (*Metaph.*) The act or process of leaving out of con-sideration one or more properties of a complex object so as to attend to others; analysis. Thus, when the mind considers the form of a tree by itself, or the color of the leaves as separate from their size or figure, the act is called *abstraction.* So, also, when it considers *white-ness*, *softness*, *virtue*, *existence*, as separate from any par-ticular objects.

☞ *Abstraction* is necessary to classification, by which things are arranged in genera and species. We separate in idea the qualities of certain objects, which are of the same kind, from others which are different, in each, and arrange the objects having the same properties in a class, or collected body.

Abstraction is no positive act: it is simply the negative of at-tention. *Sir W Hamilton*

3. An idea or notion of an abstract, or theoretical na-ture; as, to fight for mere *abstractions.*

4. A separation from worldly objects; a recluse life, as, a hermit's *abstraction.*

‖ **A-bu'na** (ä-bo͞o'nä), *n.* [Eth. and Ar, our father] The Patriarch, or head of the Abyssinian Church.

A-bun'dance (ä-bŭn'dans), *n.* [OE. (*h*)*abundaunce*, *abundance*, F. *abondance*, L. *abundantia*, fr. *abundare*. See ABOUND] An overflowing fullness, ample sufficiency; great plenty, profusion, copious supply; superfluity, wealth; — strictly applicable to quantity only, but sometimes used of number.

It is lamentable to remember what *abundance* of noble blood hath been shed with small benefit to the Christian state *Raleigh*

Syn. — Exuberance; plenteousness; plenty; copiousness, overflow, riches, affluence; wealth. — ABUNDANCE, PLENTY, EXUBERANCE. These words rise upon each other in expressing the idea of fullness. *Plenty* denotes a sufficiency to supply every want, as, *plenty* of food, *plenty* of money, etc. *Abundance* expresses more, and gives the idea of superfluity or excess; as, *abundance* of riches, an *abundance* of wit and humor, often, however, it only denotes plenty in a high degree. *Exuberance* rises still higher, and implies a bursting forth on every side, producing great superfluity or redundance, as, an *exuberance* of mirth, an *exuberance* of animal spirits, etc

A-bun'dant (-dant), *a.* [OE. (*h*)*abundant*, *aboundant*, F. *abondant*, fr. L. *abundans*, p. pr. of *abundare*. See ABOUND.] Fully sufficient, plentiful, in copious supply, — followed by *in*, rarely by *with*. "*Abundant* in goodness and truth." *Exod.* xxxiv. 6.

Abundant number (*Math.*), a number, the sum of whose aliquot parts exceeds the number itself. Thus, 1, 2, 3, 4, 6, the aliquot parts of 12, make the number 16. This is opposed to a *deficient* number, as 14, whose aliquot parts are 1, 2, 7, the sum of which is 10, and to a *perfect* number, which is equal to the sum of its aliquot parts, as 6, whose aliquot parts are 1, 2, 3.

Syn. — Ample, plentiful, copious, plenteous, exuberant, overflowing, rich; teeming, profuse, bountiful, liberal. See AMPLE.

A-bun'dant-ly, *adv.* In a sufficient degree, fully, amply; plentifully; in large measure.

6. Deceitful practice; deception; cheat. [*Obs.*]

Or is it some *abuse*, and no such thing? *Shak.*

Abuse of distress (*Law*), a wrongful using of an animal or chattel distrained, by the distrainer.

Syn. — Invective; contumely; reproach; scurrility; insult; opprobrium. — ABUSE, INVECTIVE. *Abuse* is generally prompted by anger, and vented in harsh and unseemly words. It is more personal and coarse than *invective*. *Abuse* generally takes place in private quarrels, *invective* in writing or public discussions. *Invective* may be conveyed in refined language and dictated by indignation against what is blameworthy. *C. J. Smith.*

A-buse'ful (ä-būs'fo͝ol), *a.* Full of abuse; abusive. [*R.*] "*Abuseful* names." *Bp. Barlow.*

A-bus'er (ä-bū'zẽr), *n.* One who abuses [in the various senses of the verb].

A-bu'sion (ä-bū'zhŭn), *n.* [OE. *abusyon*, *abusioun*, OF. *abusion*, fr. L. *abusio* misuse of words, fr. *abuti*. See ABUSE, *v. t.*] Evil or corrupt usage, abuse, wrong; reproach; deception; cheat. [*Obs.*] *Chaucer.*

A-bu'sive (ä-bū'sĭv), *a.* [Cf. F. *abusif*, fr. L. *abusivus*.] **1.** Wrongly used; perverted; misapplied.

I am . . necessitated to use the word Parliament improperly, according to the *abusive* acceptation thereof. *Fuller.*

2. Given to misusing; also, full of abuses. [*Archaic*] "The *abusive* prerogatives of his see." *Hallam.*

3. Practicing abuse, prone to ill treat by coarse, insulting words or by other ill usage; as, an *abusive* author, an *abusive* fellow.

4. Containing abuse, or serving as the instrument of abuse, vituperative; reproachful, scurrilous. "An *abusive* lampoon." *Johnson.*

5. Tending to deceive; fraudulent, cheating. [*Obs.*] "An *abusive* treaty" *Bacon.*

Syn. — Reproachful; scurrilous; opprobrious; insolent, insulting, injurious, offensive, reviling.

Ac'e-phal (ăs'ē-făl), *n* [Gr. ἀκέφαλος; ἀ priv. + κεφαλή head: cf. F. *acéphale*, LL *acephalus*.] (*Zoöl.*) One of the Acephala.

‖ **A-ceph'a-la** (ā-sĕf'ā-lā), *n pl.* [NL., fr. Gr. ἀκέφαλα, adj neut. pl., headless. See ACEPHAL.] (*Zool*) That division of the Mollusca which includes the bivalve shells, like the clams and oysters, — so called because they have no evident head. Formerly the group included the Tunicata, Brachiopoda, and sometimes the Bryozoa. See MOLLUSCA.

A-ceph'a-lan (-lan), *n* Same as ACEPHAL.

A-ceph'a-lan, *a* (*Zoöl*) Belonging to the Acephala.

‖ **A-ceph'a-li** (ā-sĕf'ā-lī), *n pl.* [LL., pl. of *acephalus*. See ACEPHAL.] **1.** A fabulous people reported by ancient writers to have no heads.

2. (*Eccl. Hist*) (*a*) A Christian sect without a leader. (*b*) Bishops and certain clergymen not under regular diocesan control.

3. A class of levelers in the time of K. Henry I.

A-ceph'a-list (-lĭst), *n.* One who acknowledges no head or superior. *Dr. Gauden.*

A-ceph'a-lo-cyst (ā-sĕf'ā-lō-sĭst), *n.* [Gr. ἀκέφαλος without a head + κύστις bladder.] (*Zoöl.*) A larval entozoon in the form of a subglobular or oval vesicle, or hydatid, filled with fluid, sometimes found in the tissues of man and the lower animals; — so called from the absence of a head or visible organs on the vesicle. These cysts are the immature stages of certain tapeworms. Also applied to similar cysts of different origin.

A-ceph'a-lo-cys'tic (ā-sĕf'ā-lō-sĭs'tĭk), *a.* Pertaining to, or resembling, the acephalocysts.

A-ceph'a-lous (ā-sĕf'ā-lŭs), *a.* [See ACEPHAL.] **1.** Headless.

2. (*Zool.*) Without a distinct head; — a term applied to bivalve molluska.

3 (*Bot.*) Having the style spring from the base, instead of from the apex, as is the case in certain ovaries.

4. Without a leader or chief. *Chambers.*

5. Wanting the beginning.

A false or *acephalous* structure of sentence. *De Quincey.*

6. (*Pros.*) Deficient at the beginning, as a line of poetry *Brande.*

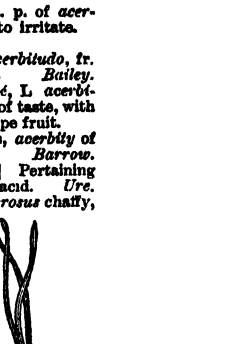
Ac'er-ate (ăs'ẽr-āt), *n.* [See ACRID.] (*Chem.*) A combination of aceric acid with a salifiable base.

Ac'er-ate, *a.* Acerose; needle-shaped.

A-cerb' (ā-sẽrb'), *a.* [L. *acerbus*, fr. *acer* sharp: cf. F. *acerbe*. See ACRID.] Sour, bitter, and harsh to the taste, as unripe fruit; sharp and harsh.

A-cerb'ate (-āt), *v. t.* [L. *acerbatus*, p. p. of *acerbare*, fr. *acerbus*.] To sour; to imbitter; to irritate.

A-cerb'ic (ā-sẽr'bĭk), *a.* Sour or severe.



A-cerb'i-tude (ā-sẽr'bĭ-tūd), *n.* [L. *acerbitudo*, fr. *acerbus*.] Sourness and harshness. [*Obs.*] *Bailey.*

A-cerb'i-ty (ā-sẽr'bĭ-tў), *n.* [F. *acerbité*, L *acerbitas*, fr. *acerbus*. See ACERB.] **1.** Sourness of taste, with bitterness and astringency, like that of unripe fruit.

2. Harshness, bitterness, or severity, as, *acerbity* of temper, of language, of pain. *Barrow.*

A-ce'ric (ā-sē'rĭk), *a.* [L *acer* maple.] Pertaining to, or obtained from, the maple; as, *aceric* acid. *Ure.*

Ac'er-ose' (ăs'ẽr-ōs'; 277), *a.* [(*a*) L. *acerosus* chaffy, fr. *acus*, gen. *aceris*, chaff; (*b*) as if fr. L *acus* needle: cf. F. *acéreux*.] (*Bot.*) (*a*) Having the nature of chaff; chaffy. (*b*) Needle-shaped, having a sharp, rigid point, as the leaf of the pine.

Acerose Leaves

Ac'er-ous (-ŭs), *a.* Same as ACEROSE.

A-cer'ous, *a.* [Gr. ἀ priv. + κέρας a horn.] (*Zoöl.*) (*a*) Destitute of tentacles, as certain molluska. (*b*) Without antennæ, as some insects.

A-cer'val (ā-sẽr'val), *a.* [L. *acervalis*, fr. *acervus* heap.] Pertaining to a heap. [*Obs.*]

A-cer'vate (-vāt), *v. t.* [L. *acervatus*, p. p. of *acervare* to heap up, fr. *acervus* heap.] To heap up. [*Obs.*]

A-cer'vate (-vāt), *a.* Heaped, or growing in heaps, or closely compacted clusters.

Ac'er-va'tion (ăs'ẽr-vā'shŭn), *n.* [L. *acervatio*] A heaping up, accumulation. [*R.*] *Johnson.*

A-cer'va-tive (ā-sẽr'vā-tĭv), *a.* Heaped up; tending to heap up

A-cer'vose (-vōs), *a.* Full of heaps. [*R.*] *Bailey.*

A-cer'vu-line (-vū-lĭn *or* -lin), *a.* Resembling little heaps.

A-ces'cence (ā-sĕs'sens), } *n.* [Cf F. *acescence*. See
A-ces'cen-cy (-sen-sў), } ACESCENT.] The quality of being acescent; the process of acetous fermentation; a moderate degree of sourness. *Johnson.*

A-ces'cent (-sent), *a.* [L. *acescens, -entis*, p. pr. of *acescere* to turn sour; inchoative of *acere* to be sour cf. F. *acescent*. See ACID] Turning sour; readily becoming tart or acid; slightly sour. *Faraday.*

A-ces'cent, *n.* A substance liable to become sour.

Ac'e-ta-ble (ăs'ē-tā-b'l), *n.* An acetabulum; or about one eighth of a pint. [*Obs.*] *Holland.*

Ac'e-tab'u-lar (ăs'ē-tăb'ū-lẽr), *a.* Cup-shaped; saucer-shaped; acetabuliform.

‖ **Ac'e-tab'u-lif'e-ra** (-tăb'ū-lĭf'ē-rā), *n. pl.* [NL. See ACETABULIFEROUS] (*Zool.*) The division of Cephalopoda in which the arms are furnished with cup-shaped suckers, as the cuttlefishes, squids, and octopus; the Dibranchiata. See CEPHALOPODA.

Ac'e-tab'u-lif'er-ous (ăs'ē-tăb'ū-lĭf'ẽr-ŭs), *a.* [L. *acetabulum* a little cup + *-ferous*.] Furnished with fleshy cups for adhering to bodies, as cuttlefish, etc.

Ac'e-tab'u-li-form (-tăb'ū-lĭ-fôrm), *a.* [L. *acetabulum* + *-form*.] (*Bot.*) Shaped like a shallow cup; saucer-shaped; as, an *acetabuliform* calyx. *Gray.*

‖ **Ac'e-tab'u-lum** (-tăb'ū-lŭm), *n.* [L., a little saucer for vinegar, fr. *acetum* vinegar, fr. *acere* to be sour.] **1.** (*Rom. Antiq.*) A vinegar cup; socket of the hip bone; a measure of about one eighth of a pint, etc.

2. (*Anat.*) (*a*) The bony cup which receives the head of the thigh bone. (*b*) The cavity in which the leg of an insect is inserted at its articulation with the body. (*c*) A sucker of the sepia or cuttlefish and related animals (*d*) The large posterior sucker of the leeches. (*e*) One of the lobes or cotyledons of the placenta in ruminating animals.

A-ce'tal (ā-sē'tal), *n.* [*Acetic* + *alcohol*.] (*Chem.*) A limpid, colorless, inflammable liquid produced by the slow oxidation of alcohol under the influence of platinum black. *Eng. Cyc.*

Ac'et-al'de-hyde (ăs'ēt-ăl'dē-hīd), *n.* Acetic aldehyde See ALDEHYDE

Ac'et-am'ide (-ăm'īd *or* -id), *n.* [*Acetyl* + *amide*.] (*Chem.*) A white crystalline solid, derived from ammonia by replacement of an equivalent of hydrogen by acetyl.

Ac'e-ta'ri-ous (ăs'ē-tā'rĭ-ŭs), *a.* [L. *acetaria*, n. pl., salad, fr. *acetum* vinegar, fr. *acere* to be sour.] Used in salads; as, *acetarious* plants.

Ac'e-ta-ry (ăs'ē-tā-rȳ), *n.* [L. *acetaria* salad plants.] An acid pulp in certain fruits, as the pear. *Grew.*

Ac'e-tate (-tāt), *n.* [L. *acetum* vinegar, fr. *acere* to be sour.] (*Chem.*) A salt formed by the union of acetic acid with a base or positive radical; as, *acetate* of lead, *acetate* of potash.

Ac'e-ta'ted (-tā'tĕd), *a.* Combined with acetic acid.

A-ce'tic (ă-sē'tĭk *or* ă-sēt'ĭk; 277), *a.* [L. *acetum* vinegar, fr. *acere* to be sour.] (*Chem.*) (*a*) Of or pertaining to vinegar; producing vinegar; as, *acetic* fermentation. (*b*) Pertaining to, containing, or derived from, acetyl, as *acetic* ether, *acetic* acid. The latter is the acid to which the sour taste of vinegar is due.

A-cet'i-fi-ca'tion (ă-sĕt'ĭ-fĭ-kā'shŭn), *n.* The act of making acetous or sour, the process of converting, or of becoming converted, into vinegar.

A-cet'i-fi'er (ă-sĕt'ĭ-fī'ẽr), *n.* An apparatus for hastening acetification. *Knight.*

A-cet'i-fy (ă-sĕt'ĭ-fī), *v. t.* [*imp. & p. p.* Acetified (-fīd); *p. pr. & vb. n.* Acetifying (-fī'ĭng).] [L. *acetum* vinegar + *-fy.*] To convert into acid or vinegar.

A-cet'i-fy, *v. i.* To turn acid. *Encyc. Dom. Econ.*

Ac'e-tim'e-ter (ăs'ē-tĭm'ē-tẽr), *n.* [L. *acetum* vinegar + *-meter:* cf. F. *acétimètre.*] An instrument for estimating the amount of acetic acid in vinegar or in any liquid containing acetic acid.

Ac'e-tim'e-try (-trȳ), *n.* The act or method of ascertaining the strength of vinegar, or the proportion of acetic acid contained in it. *Ure.*

Ac'e-tin (ăs'ē-tĭn), *n.* (*Chem.*) A combination of acetic acid with glycerin. *Brande & C.*

Ac'e-tize (ăs'ē-tiz), *v. i.* To acetify. [*R.*]

Ac'e-tom'e-ter (ăs'ē-tŏm'ē-tẽr), *n.* Same as Acetimeter. *Brande & C.*

Ac'e-tone (ăs'ē-tōn), *n.* [See Acetic.] (*Chem.*) A volatile liquid consisting of three parts of carbon, six of hydrogen, and one of oxygen; pyroacetic spirit, — obtained by the distillation of certain acetates, or by the destructive distillation of citric acid, starch, sugar, or gum, with quicklime.

☞ The term is also applied to a number of bodies of similar constitution, more frequently called *ketones.* See Ketone.

Ac'e-ton'ic (ăs'ē-tŏn'ĭk), *a.* Of or pertaining to acetone; as, *acetonic* acid, *acetonic* bodies.

Ac'e-tose' (ăs'ē-tōs'), *a.* Sour like vinegar, acetous

Ac'e-tos'i-ty (ăs'ē-tŏs'ĭ-tȳ), *n.* [LL. *acetositas.* See Acetous.] The quality of being acetous, sourness.

Ac'e'tous (ă-sē'tŭs, 277), *a.* [L *acetum* vinegar, fr. *acere* to be sour.] **1.** Having a sour taste, sour; acid. "An *acetous* spirit." *Boyle.* "A liquid of an *acetous* kind." *Bp Lowth.*

2. Causing, or connected with, acetification, as, *acetous* fermentation.

Acetous acid, a name formerly given to vinegar.

Ac'e-tyl (ăs'ē-tĭl), *n.* [L *acetum* vinegar + Gr ὕλη substance. See -yl.] (*Chem.*) A complex, hypothetical radical, composed of two parts of carbon to three of hydrogen and one of oxygen. Its hydroxide is acetic acid.

A-cet'y-lene (ă-sĕt'ĭ-lēn), *n.* (*Chem.*) A gaseous compound of carbon and hydrogen, in the proportion of two atoms of the former to two of the latter It is a colorless gas, with a peculiar, unpleasant odor, and is often produced in imperfect combustion by a Bunsen's gas-burner, the flame of which has passed down the tube, and burns at the base: — called also *ethine* *Watts*

Ache (āch), *n.* [F. *ache,* L *apium* parsley] A name given to several species of plants, as, smallage, wild celery, parsley. [*Obs.*] *Holland*

A-cha'an (ă-kē'an), **A-cha'ian** (ă-kā'yan), *a.* [L. *Achaeus, Achaius,* Gr Ἀχαιος] Of or pertaining to Achaia in Greece, also, Grecian. — *n.* A native of Achaia; a Greek.

‖ **A-char'ne-ment** (ă-shär'nĕ-mĕn), *n* [F.] Savage fierceness; ferocity

Ach'ate (āk'ĕt), *n* An agate [*Obs.*] *Evelyn*

A-chate' (ă-kāt'), *n* [F *achat* purchase. See Cates] **1.** Purchase, bargaining [*Obs.*] *Chaucer.* **2.** *pl.* Provisions. Same as Cates. [*Obs.*] *Spenser.*

‖ **Ach'a-ti'na** (ăk'ă-tī'nă *or* -tē'nă), *n* [NL., from Gr. ἀχάτης agate] (*Zool.*) A genus of land snails, often large, common in the warm parts of America and Africa.

A-cha-tour' (ă-kà-tōōr'), *n.* [See Cater] Purveyor; acater. [*Obs.*] *Chaucer*

Ache (āk), *n* [OE *ache,* AS *æce, ece,* fr. *acan* to ache. See Ache, *v. i.*] Continued pain, as distinguished from sudden twinges, or spasmodic pain. "Such an *ache* in my bones." *Shak.*

☞ Often used in composition, as, a head*ache*, an ear*ache*, a tooth*ache*.

Ache (āk), *v. i* [*imp. & p. p.* Ached (ākt), *p. pr. & vb. n.* Aching (āk'ĭng).] [OE. *aken,* AS *acan,* both strong verbs, AS *acan,* imp *ōc,* p. p *acen,* to ache, perh. orig. to drive, and akin to *agent.*] To suffer pain, to have, or be in, pain, or in continued pain, to be distressed. "My old bones *ache.*" *Shak.*

The sins that in your conscience *ache.* *Keble*

A-che'an (ă-kē'an), *a. & n.* See Achæan, Achaian

A-chene' (ă-kēn'), *n* [Gr ἀ priv. + χαίνειν to gape] (*Bot.*) A small, dry, indehiscent fruit, containing a single seed, as in the buttercup; — called a *naked seed* by the earlier botanists. [Written also *akene* and *achænium.*]

A-che'ni-al (ă-kē'nĭ-al), *a.* Pertaining to an achene

Ach'e-ron (ăk'ē-rŏn), *n.* [L., fr. Gr. Ἀχέρων.] (*Myth.*) A river in the Nether World or infernal regions; also, the infernal regions themselves. By some of the English poets it was supposed to be a flaming lake or gulf. *Shak.*

Ach'e-ron'tic (ăk'ē-rŏn'tĭk), *a.* Of or pertaining to Acheron; infernal; hence, dismal, gloomy, moribund.

A-chiev'a-ble (ă-chēv'ă-b'l), *a.* Capable of being achieved. *Barrow.*

A-chiev'ance (ă-chēv'ans), *n.* [Cf. OF. *achevance.*] Achievement. [*Obs.*] *Sir T. Elyot.*

A-chieve' (ă-chēv'), *v. t.* [*imp. & p. p.* Achieved (-chēvd'); *p. pr. & vb. n.* Achieving (-chēv'ĭng).] [OE. *achevен,* OF *achever, achiever, F. achever,* to finish; à (L. *ad*) + OF. *chef,* F. *chef,* end, head, fr. L. *caput* head. See Chief] **1.** To carry on to a final close; to bring out into a perfected state; to accomplish, to perform; — as, to *achieve* a feat, an exploit, an enterprise.

Supposing faculties and powers to be the same, far more may be *achieved* in any line by the aid of a capital, invigorating motive than without it *I Taylor*

2. To obtain, or gain, as the result of exertion, to succeed in gaining, to win.

Some are born great, some *achieve* greatness *Shak*
Thou hast *achieved* our liberty *Milton*

[*Obs.*, with a material thing as the aim]

Show all the spoils by valiant kings *achieved* *Prior*
He hath *achieved* a maid
That paragons description. *Shak*

3. To finish; to kill. [*Obs.*] *Shak.*

Syn. — To accomplish, effect; fulfill; complete, execute, perform; realize; obtain. See Accomplish

A-chieve'ment (-ment), *n.* [Cf. F *achèvement,* E. Hatchment] **1** The act of achieving or performing, an obtaining by exertion, successful performance, accomplishment; as, the *achievement* of his object

2. A great or heroic deed; something accomplished by valor, boldness, or praiseworthy exertion, a feat

[The exploits] of the ancient saints . . do far surpass the most famous *achievements* of pagan heroes *Barrow*
The highest *achievements* of the human intellect *Macaulay*

3. (*Her.*) An escutcheon or ensign armorial, now generally applied to the funeral shield commonly called *hatchment.* *Cussans*

A-chiev'er (-ẽr), *n* One who achieves; a winner

Ach'il-le'an (ăk'ĭl-lē'an), *a.* Resembling Achilles, the hero of the Iliad, invincible.

A-chil'les' ten'don (ă-kĭl'lēz tĕn'dŭn), *n.* [L *Achillis tendo*] (*Anat.*) The strong tendon formed of the united tendons of the large muscles in the calf of the leg, and inserted into the bone of the heel, — so called from the mythological account of Achilles being held by the heel when dipped in the River Styx.

A-chi'lous (ă-kī'lŭs), *a.* [Gr. ἀ priv. + χεῖλος lip] (*Bot.*) Without a lip.

Ach'ing (āk'ĭng), *a* That aches; continuously painful. See Ache — **Ach'ing-ly,** *adv.*

The *aching* heart, the *aching* head *Longfellow*

‖ **A'chi-o'te** (ä'chĭ-ō'tā), *n.* [Sp. *achiote,* fr Indian *achiotl*] Seeds of the annotto tree, also, the coloring matter, annotto.

A-chlam'y-date (ă-klăm'ĭ-dāt), *a* [Gr. ἀ priv + χλαμύς, -υδος, a short cloak] (*Zool.*) Not possessing a mantle, — said of certain gastropods.

Ach'la-myd'e-ous (ăk'lă-mĭd'ē-ŭs), *a* (*Bot.*) Naked, having no floral envelope, neither calyx nor corolla

‖ **A-cho'li-a** (ă-kō'lĭ-ă), *n.* [NL, from Gr. ἀχολία, ἀ priv. + χολή bile] (*Med.*) Deficiency or want of bile.

Ach'o-lous (ăk'ō-lŭs), *a* (*Med.*) Lacking bile.

Ach'ro-mat'ic (ăk'rō-măt'ĭk), *a* [Gr. ἀχρώματος colorless, ἀ priv. + χρῶμα, χρωματος, color cf F. *achromatique.*] **1.** (*Opt.*) Free from color, transmitting light without decomposing it into its primary colors.

2 (*Biol.*) Uncolored; not absorbing color from a fluid, — said of tissue.

Achromatic lens (*Opt.*), a lens composed usually of two separate lenses, a convex and a concave, of substances having different refractive and dispersive powers, as crown and flint glass, with the curvatures so adjusted that the chromatic aberration produced by the one is corrected by the other, and light emerges from the compound lens undecomposed — **Achromatic prism** See Prism. — **Achromatic telescope,** or **microscope,** one in which the chromatic aberration is corrected, usually by means of a compound or achromatic object glass, and which gives images free from extraneous color.

Ach'ro-mat'ic-al-ly (-ĭ-kal-lȳ), *adv.* In an achromatic manner.

Ach'ro-ma-tic'i-ty (-mă-tĭs'ĭ-tȳ), *n* Achromatism

A-chro'ma-tin (ă-krō'mă-tĭn), *n* (*Biol.*) Tissue which is not stained by fluid dyes. *W Flemming*

A-chro'ma-tism (-tĭz'm), *n* [Cf F *achromatisme.*] The state or quality of being achromatic, as, the *achromatism* of a lens, achromaticity *Nichol*

A-chro'ma-ti-za'tion (ă-krō'mă-tĭ-zā'shŭn), *n.* [Cf. F. *achromatisation.*] The act or process of achromatizing.

A-chro'ma-tize (ă-krō'mă-tiz), *v. t.* [*imp & p p* Achromatized (-tizd), *p pr & vb n* Achromatizing (-tĭz'ĭng)] [Gr. ἀ priv. + χρῶμα color] To deprive of color, to make achromatic

A-chro'ma-top'sy (-tŏp'sȳ), *n.* [Gr. ἀ priv + χρῶμα color + ὄψις sight] Color blindness; inability to distinguish colors, Daltonism

A-chron'ic (ă-krŏn'ĭk), *a* See Acronyc.

Ach'ro-ŭ-dex'trin (ăk'rō-ū-dĕks'trĭn), *n* [Gr ἄχροος colorless + E *dextrin*] (*Physiol Chem.*) Dextrin not colorable by iodine See Dextrin

Ach'ro-ous (ăk'rō-ŭs), *a.* [Gr. ἄχροος, ἀ priv + χρόα color] Colorless, achromatic

A-chy'lous (ă-kī'lŭs), *a.* [Gr. ἄχυλος without juice.] (*Physiol.*) Without chyle.

A-chy'mous (ă-kī'mŭs), *a.* [Gr. ἄχυμος without juice.] (*Physiol.*) Without chyme.

‖ **A-cic'u-la** (ă-sĭk'ū-lă), *n., pl.* Aciculæ (-lē) [L, a small needle, dimin of *acus* needle] (*Nat Hist.*) One of the needlelike or bristlelike spines or prickles of some animals and plants, also, a needlelike crystal.

A-cic'u-lar (-lẽr), *a.* Needle-shaped, slender like a needle or bristle, as some leaves or crystals, also, having sharp points like needles — **A-cic'u-lar-ly,** *adv*

A-cic'u-late (ă-sĭk'ū-lāt), **A-cic'u-la'ted** (-ū-lā'tĕd), *a.* (*Nat. Hist.*) (*a*) Furnished with aciculæ (*b*) Acicular. (*c*) Marked with fine irregular streaks as if scratched by a needle. *Lindley.*

A-cic'u-li-form (ă-sĭk'ū-lĭ-fôrm), *a.* [L. *aciculа* needle + *-form.*] Needle-shaped; acicular.

A-cic'u-lite (-līt), *n.* (*Min.*) Needle ore. *Brande & C.*

Ac'id (ăs'ĭd), *a.* [L. *acidus* sour, fr. the root *ak* to be sharp: cf. F. *acide.* Cf. Acute.] **1.** Sour, sharp, or biting to the taste; tart; having the taste of vinegar; as, *acid* fruits or liquors. **Also fig.:** Sour-tempered.

He was stern and his face as *acid* as ever. *A. Trollope.*

2. Of or pertaining to an acid; as, *acid* reaction.

Ac'id, *n.* **1.** A sour substance.

2. (*Chem.*) One of a class of compounds, generally but not always distinguished by their sour taste, solubility in water, and reddening of vegetable blue or violet colors. They are also characterized by the power of destroying the distinctive properties of alkalies or bases, combining with them to form salts, at the same time losing their own peculiar properties. They all contain hydrogen, united with a more negative element or radical, either alone, or more generally with oxygen, and take their names from this negative element or radical. Those which contain no oxygen are sometimes called *hydracids* in distinction from the others which are called *oxygen acids* or *oxacids.*

☞ In certain cases, sulphur, selenium, or tellurium may take the place of oxygen, and the corresponding compounds are called respectively *sulphur acids* or *sulphacids, selenium acids,* or *tellurium acids.* When the hydrogen of an acid is replaced by a positive element or radical, a salt is formed, and hence acids are sometimes named as salts of hydrogen, as *hydrogen nitrate* for nitric acid, *hydrogen sulphate* for sulphuric acid, etc In the old chemistry the name *acid* was applied to the oxides of the negative or nonmetallic elements, now sometimes called *anhydrides.*

A-cid'ic (ă-sĭd'ĭk), *a.* (*Min.*) Containing a high percentage of silica; — opposed to *basic.*

Ac'id-if'er-ous (ăs'ĭd-ĭf'ẽr-ŭs), *a.* [L. *acidus* sour + *-ferous.*] Containing or yielding an acid.

A-cid'i-fi'a-ble (ă-sĭd'ĭ-fī'ă-b'l), *a* Capable of being acidified, or converted into an acid.

Ac'id-if'ic (ăs'ĭd-ĭf'ĭk), *a.* Producing acidity, converting into an acid. *Dana*

A-cid'i-fi-ca'tion (ă-sĭd'ĭ-fĭ-kā'shŭn), *n* [Cf F. *acidification.*] The act or process of acidifying, or changing into an acid.

A-cid'i-fi'er (ă-sĭd'ĭ-fī'ẽr), *n* (*Chem.*) A simple or compound principle, whose presence is necessary to produce acidity, as oxygen, chlorine, bromine, iodine, etc.

A-cid'i-fy (-fī), *v. t.* [*imp & p p* Acidified (-fīd); *p pr & vb. n* Acidifying (-fī'ĭng)] [L *acidus* sour, acid + *-fy:* cf. F. *acidifier*] **1.** To make acid; to convert into an acid, as, to *acidify* sugar.

2. To sour, to embitter

4 Admissibility [*Obs. & R*] *Shak*

5 (*Eng Law*) The act of giving possession of a copyhold estate *Bouvier*

Syn.—Admission, access, entrance, initiation. ADMITTANCE, ADMISSION These words are, to some extent, in a state of transition and change. *Admittance* is now chiefly confined to its primary sense of access into some locality or building Thus we see on the doors of factories, shops, etc., "No *admittance*" Its secondary or moral sense, as "*admittance* to the church," is almost entirely laid aside *Admission* has taken to itself the secondary or figurative senses, as, *admission* to the rights of citizenship, *admission* to the church; the *admissions* made by one of the parties in a dispute And even when used in its primary sense, it is not identical with *admittance* Thus, we speak of *admission* into a country, territory, and other larger localities, etc., where *admittance* could not be used. So, when we speak of *admission* to a concert or other public assembly, the meaning is not perhaps exactly that of *admittance*, viz., access within the walls of the building, but rather a reception into the audience, or access to the performances. But the lines of distinction on this subject are not definitely drawn.

A-dorn' (ă-dōrn'), *v. t.* [*imp. & p. p.* ADORNED (ă-dōrnd'); *p. pr. & vb. n.* ADORNING.] [OE. *aournen, anournen, adornen*, OF. *aorner*, fr. L. *adornare; ad* + *ornare* to furnish, embellish. See ADORE, ORNATE] To deck or dress with ornaments, to embellish; to set off to advantage, to render pleasing or attractive.

As a bride *adorneth* herself with her jewels. *Isa.* lxi 10

At church, with meek and unaffected grace,
His looks *adorned* the venerable place *Goldsmith*

Syn. — To deck; decorate; embellish; ornament, beautify, grace; garnish, dignify, exalt, honor. — To ADORN, ORNAMENT, DECORATE, EMBELLISH We *decorate* and *ornament* by putting on some *adjunct* which is attractive or beautiful, and which serves to heighten the general effect. Thus, a lady's head-dress may be *ornamented* or *decorated* with flowers or jewelry, a hall may be *decorated* or *ornamented* with carving or gilding, with wreaths of flowers, or with hangings *Ornament* is used in a wider sense than *decorate* To *embellish* is to beautify or ornament richly, not so much by mere additions or details as by modifying the thing itself as a whole. It sometimes means gaudy and artificial decoration. We *embellish* a book with rich engravings, a style is *embellished* with rich and beautiful imagery, a shopkeeper *embellishes* his front window to attract attention *Adorn* is sometimes identical with *decorate*, as when we say, a lady was *adorned* with jewels. In other cases, it seems to imply something more. Thus, we speak of a gallery of paintings as *adorned* with the works of some of the great masters, or *adorned* with noble statuary and columns Here *decorated* and *ornamented* would hardly be appropriate. There is a value in these works of genius beyond mere show and ornament. *Adorn* may be used of what is purely moral, as, a character *adorned* with every Christian grace Here neither *decorate*, nor *ornament*, nor *embellish* is proper.

All (al), *a* [OE *al*, pl *alle*, AS *eal*, pl *ealle*, Northumbrian *alle*, akin to D & OHG *al*, Ger *all*, Icel *allr*, Dan. *al*, Sw *all*, Goth *alls*, and perh to Ir and Gael *uile*, W. *oll*] 1 The whole quantity, extent, duration, amount, quality, or degree of, the whole, the whole number of, any whatever, every, as, *all* the wheat, *all* the land; *all* the year, *all* the strength, *all* happiness, *all* abundance; loss of *all* power, beyond *all* doubt, you will see us *all* (or all of us)

Prove *all* things hold fast that which is good 1 *Thess* v 21

2 Any. [*Obs.*] "Without *all* remedy" *Shak*

☞ When the definite article "the," or a possessive or a demonstrative pronoun, is joined to the noun that *all* qualifies, *all* precedes the article or the pronoun, as, *all* the cattle; *all* my labor, *all* his wealth, *all* our families, *all* your citizens, *all* their property, *all* other joys.

This word, not only in popular language, but in the Scriptures, often signifies, indefinitely, a large portion or number, or a great part Thus, *all* the cattle in Egypt died, *all* Judea and *all* the region round about Jordan, *all* men held John as a prophet, are not to be understood in a literal sense, but as including a large part, or very great numbers

3. Only; alone, nothing but.

I was born to speak *all* mirth and no matter *Shak*

All the whole, the whole (emphatically). [*Obs.*] "*All the whole* army" *Shak.*

All, *adv.* 1 Wholly; completely; altogether; en-

tirely; quite; very; as, *all* bedewed, my friend is *all* for amusement. "And cheeks *all* pale." *Byron.*

☞ In the ancient phrases, *all* too dear, *all* too much, *all* so long, etc., this word retains its appropriate sense or becomes intensive.

2. Even, just. (Often a mere intensive adjunct) [*Obs.* or *Poet.*]

All as his straying flock he fed. *Spenser*
A damsel lay deploring
All on a rock reclined *Gay*

All to, or All-to. In such phrases as "*all to* rent," "*all to* break," "*all-to* frozen," etc., which are of frequent occurrence in our old authors, the *all* and the *to* have commonly been regarded as forming a compound adverb, equivalent in meaning to *entirely, completely, altogether*. But the sense of entireness lies wholly in the word *all* (as it does in "*all* forlorn," and similar expressions), and the *to* properly belongs to the following word, being a kind of intensive prefix (orig. meaning *asunder* and answering to the LG. *ter-*, HG *zer-*). It is frequently to be met with in old books, used without the *all*. Thus Wyclif says, "The vail of the temple was *to rent*;" and of Judas, "He was hanged and *to-burst* the middle," i. e., burst in two, or asunder. — **All along.** See under ALONG. — **All and some,** individually and collectively, one and all. [*Obs.*] "Displeased *all and some*." *Fairfax.* — **All but.** (*a*) Scarcely, not even. [*Obs.*] *Shak.* (*b*) Almost, nearly. "The fine arts were *all but* proscribed" *Macaulay.* — **All hollow,** entirely, completely; as, to beat any one *all hollow* [*Low*] — **All one,** the same thing in effect, that is, wholly the same thing — **All over,** over the whole extent, thoroughly; wholly; as, she is her mother *all over* [*Colloq.*] — **All the better,** wholly the better, that is, better by the whole difference. — **All the same,** nevertheless. "There they [certain phenomena] remain rooted *all the same*, whether we recognize them or not." *J. C. Shairp* "But Rugby is a very nice place *all the same*." *T. Arnold.* — See also under ALL, *n.*

All (ôl), *n* The whole number, quantity, or amount, the entire thing; everything included or concerned, the aggregate, the whole, totality, everything or every person, as, our *all* is at stake.

Death, as the Psalmist saith, is certain to *all* *Shak.*
All that thou sest is mine *Gen.* xxxi 43

All is used with *of*, like a partitive, as, *all* of a thing, *all* of us.

After all, after considering everything to the contrary nevertheless. — **All in all,** a phrase which signifies *all* things to a person, or everything desired, (also *adverbially*) wholly, altogether.

Thou shalt be *all in all*, and I in thee,
Forever *Milton*
Trust me not at all, or *all in all* *Tennyson*

All in the wind (*Naut.*), a phrase denoting that the sails are parallel with the course of the wind, so as to shake — **All told,** all counted; in all — **And all,** and the rest; and everything else; and everything connected. "Bring our crown *and all*." *Shak.* — **At all** (*a*) In every respect wholly; thoroughly. [*Obs.*] "She is a shrew *at all*(*l*)" *Chaucer.* (*b*) A phrase much used by way of enforcement or emphasis, usually in negative or interrogative sentences, and signifying *in any way or respect, in the least degree* or *to the least extent, in the least, under any circumstances*; as, he has no ambition *at all*; has he any property *at all*? "Nothing *at all*." *Shak.* "If thy father *at all* miss me." 1 *Sam.* xx. 6. — **Over all,** everywhere [*Obs.*] *Chaucer.*

☞ *All* is much used in composition to enlarge the meaning, or add force to a word In some instances, it is completely incorporated into words, and its final consonant is dropped, as in *al*mighty, *al*ready, *al*ways, but, in most instances, it is an adverb prefixed to adjectives or participles, but usually with a hyphen, as, *all*-bountiful, *all*-glorious, *all*-important, *all*-surrounding, etc. In others it is an adjective; as, *all*-power, *all*-giver. Anciently many words, as, *al*about, *al*nground, etc., were compounded with *all*, which are now written separately.

All, *conj.* [Orig. *all*, adv., wholly · used with *though* or *if*, which being dropped before the subjunctive left *all* as if in the sense *although*.] Although, albeit. [*Obs.*]

All they were wondrous loth. *Spenser*

2 Devotion, loyalty, as, *allegiance* to science

Syn. — Loyalty, fealty — ALLEGIANCE, LOYALTY These words agree in expressing the general idea of fidelity and attachment to the "powers that be" *Allegiance* is an obligation to a ruling power. *Loyalty* is a feeling or sentiment towards such power. *Allegiance* may exist under any form of government, and, in a republic, we generally speak of *allegiance* to the government, to the state, etc. In well conducted monarchies, *loyalty* is a warm-hearted feeling of fidelity and obedience to the sovereign. It is personal in its nature; and hence we speak of the *loyalty* of a wife to her husband, not of her *allegiance*. In cases where we personify, *loyalty* is more commonly the word used; as, *loyalty* to the constitution, *loyalty* to the cause of virtue, *loyalty* to truth and religion, etc.

Hear me, recreant, on thine *allegiance* hear me! *Shak*
So spake the Seraph Abdiel, faithful found, . . .

2 Anything which represents by suggestive resemblance, an emblem

3 (*Paint. & Sculpt.*) A figure or representation which has a meaning beyond the notion directly conveyed by the object painted or sculptured.

Syn. — Metaphor, fable. — ALLEGORY, PARABLE "An *allegory* differs both from fable and *parable*, in that the properties of persons are fictitiously represented as attached to things, to which they are as it were transferred . . . A figure of Peace and Victory crowning some historical personage is an *allegory*." "I am the Vine, ye are the branches" [*John* xv. 1 6] is a spoken *allegory*. In the *parable* there is no transference of properties. The *parable* of the sower [*Matt.* xiii 3-23] represents all things as according to their proper nature. In the *allegory* quoted above the properties of the vine and the relation of the branches are transferred to the person of Christ and His apostles and disciples" *C. J. Smith*

An *allegory* is a prolonged metaphor. Bunyan's "Pilgrim's Progress" and Spenser's "Faerie Queene" are celebrated examples of the *allegory*

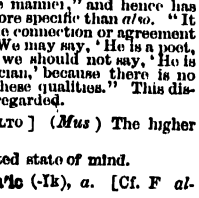
Al'so (ąl'sō), *adv & conj.* [*All* + *so.* OE. *al so*, AS *ealswā*, *alswā*, *ælswā*, *eal*, *al*, *æl*, all + *swa* so See All, So, As] **1** In like manner, likewise [*Obs.*]

2. In addition; besides; as well; further, too

Lay up for yourselves treasures in heaven . for where your treasure is, there will your heart be *also* *Matt* vi 20



3. Even as; as, so [*Obs.*] *Chaucer.*

Syn.—Also, Likewise, Too. These words are used by way of *transition*, in leaving one thought and passing to another. *Also* is the widest term It denotes that what follows is *all so*, or entirely like that which preceded, or may be affirmed with the same truth, as, "If you were there, I was there *also*," "If our situation has some discomforts, it has *also* many sources of enjoyment." *Too* is simply less formal and pointed than *also*, it marks the transition with a lighter touch, as, "I was there *too*," "a courtier yet a patriot *too*" *Pope. Likewise* denotes literally "in like manner," and hence has been thought by some to be more specific than *also*. "It implies," says Whately, "some connection or agreement between the words it unites. We may say, 'He is a poet, and *likewise* a musician;' but we should not say, 'He is a *prince*, and *likewise* a musician,' because there is no natural connection between these qualities." This distinction, however, is often disregarded.

Alt (Ălt), *a. & n.* [See Alto] (*Mus*) The higher part of the scale. See Alto.

To be in alt, to be in an exalted state of mind.

‖ **Al'u-la** (Al'ū-lă), *n.* [NL, dim of L *ala* a wing] (*Zoöl.*) A false or bastard wing. See under BASTARD.

Al'u-lar (-lẽr), *a* (*Zool*) Pertaining to the alula.

Al'um (Al'ŭm), *n.* [OE *alum, alom*, OF. *alum*, F. *alun*, fr L. *alumen* alum] (*Chem*) A double sulphate formed of aluminium and some other element (esp an alkali metal) or of aluminium and ammonium. It has twenty-four molecules of water of crystallization.

☞ Common *alum* is the double sulphate of aluminium and potassium. It is white, transparent, very astringent, and crystallizes easily in octahedrons The term is extended so as to include other double sulphates similar to alum in formula.

Al'um (Al'ŭm), *v. t.* To steep in, or otherwise impregnate with, a solution of alum, to treat with alum. *Ure*

‖ **A-lu'men** (ă-lū'mĕn), *n.* [L.] (*Chem*) Alum.

A-lu'mi-na (ă-lū'mĭ-nă), *n.* [L. *alumen, aluminis* See ALUM.] (*Chem.*) One of the earths, consisting of two parts of aluminium and three of oxygen, Al_2O_3

☞ It is the oxide of the metal aluminium, the base of aluminous salts, a constituent of a large part of the earthy alliceous minerals, as the feldspars, micas, scapolites, etc., and the characterizing ingredient of common clay, in which it exists as an impure silicate with water, resulting from the decomposition of other aluminous minerals. In its natural state, it is the mineral corundum.

A-lu'mi-nate (ă-lū'mĭ-nāt), *n.* (*Chem.*) A compound formed from the hydrate of aluminium by the substitution of a metal for the hydrogen.

A-lu'mi-na'ted (-nā'tĕd), *a.* Combined with alumina.

Al'u-mine (Al'ū-mĭn), *n.* [F.] Alumina. *Davy*

Al'u-min'ic (Al'ū-mĭn'Ik), *a.* Of or containing aluminium, as, *aluminic* phosphate

A-lu'mi-nif'er-ous (ă-lū'mĭ-nĭf'ẽr-ŭs), *a.* [L. *alumen* alum + *-ferous.* cf F. *alumnifère*] Containing alum.

A-lu'mi-ni-form (ă-lū'mĭ-nĭ-fôrm *or* Al'ū-mĭn'Ĭ-fôrm), *a.* [L *alumen* + *-form.*] Having the form of alumina.

Al'u-min'i-um (Al'ū-mĭn'Ĭ-ŭm), *n.* [L *alumen.* See ALUM.] (*Chem.*) The metallic base of alumina. This metal is white, but with a bluish tinge, and is remarkable for its resistance to oxidation, and for its lightness, having a specific gravity of about 2 6. Atomic weight 27 08. Symbol Al.

Aluminium bronze or gold, a pale gold-colored alloy of aluminium and copper, used for journal bearings, etc.

A-lu'mi-nize (ă-lū'mĭ-nīz), *v. t.* To treat or impregnate with alum, to alum.

A-lu'mi-nous (ă-lū'mĭ-nŭs), *a* [L *aluminosus*, fr *alumen* alum: cf. F *alumineux*] Pertaining to or containing alum, or alumina, as, *aluminous* minerals, *aluminous* solution.

A-lu'mi-num (ă-lū'mĭ-nŭm), *n.* See ALUMINIUM.

Al'um-ish (Al'ŭm-Ish), *a* Somewhat like alum

‖ **A-lum'na** (ă-lŭm'nă), *n fem*, *pl.* ALUMNÆ (-nē). [L See ALUMNUS.] A female pupil, especially, a graduate of a school or college.

‖ **A-lum'nus** (ă-lŭm'nŭs), *n*, *pl.* ALUMNI (-nī). [L., fr *alere* to nourish] A pupil, especially, a graduate of a college or other seminary of learning

Al'um root' (rōōt') (*Bot*) A North American herb (*Heuchera Americana*) of the Saxifrage family, whose root has astringent properties

Al'um schist' (shĭst'), } (*Min*) A variety of shale or
Al'um shale' (shāl'), } clay slate, containing iron pyrites, the decomposition of which leads to the formation of alum, which often effloresces on the rock

Al'um stone' (stōn') (*Min*) A subsulphate of alumina and potash, alunite.

Al'u-nite (Al'ū-nīt), *n.* (*Min*) Alum stone

A-lu'no-gen (ă-lū'nŏ-jĕn), *n* [F *alun* alum + *-gen*] (*Min*) A white fibrous mineral frequently found on the walls of mines and quarries, chiefly hydrous sulphate of alumina; — also called *feather alum*, and *hair salt*

Al'ure (Al'ūr), *n.* [OF *alure, aleure*, walk, gait, fr *aler* (F *aller*) to go] A walk or passage, — applied to passages of various kinds

The sides of every street were covered with fresh *alures* of marble *T Warton.*

Al'u-ta'ceous (Al'ū-tā'shŭs), *a.* [L *alutaceus*, fr. *aluta* soft leather] **1.** Leathery.

2. Of a pale brown color, leather-yellow *Brande.*

Al'u-ta'tion (-shŭn), *n* [See ALUTACEOUS] The tanning or dressing of leather [*Obs*] *Bount*

Al've-a-ry (Al'vĕ-ă-rĭ), *n*, *pl* ALVEARIES (-rĭz) [L *alvearium, alveare*, beehive, fr *alveus* a hollow vessel, beehive, from *alvus* belly, beehive] **1.** A beehive, or something resembling a beehive *Barn*

2 (*Anat*) The hollow of the external ear *Quincy*

Al've-a'ted (-ā'tĕd), *a* [L *alveatus* hollowed out] Formed or vaulted like a beehive

Al've-o-lar (Al'vĕ-ō-lẽr *or* Al-vē'ō-lẽr, 277), *a* [L *alveolus* a small hollow or cavity cf. F *alvéolaire*] (*Anat*) Of, pertaining to, or resembling, alveoli or little cells, sacs, or sockets

Alveolar processes, the processes of the maxillary bones, containing the sockets of the teeth.

Al've-o-la-ry (-lă-rĭ), *a* Alveolar [*R*]

Al've-o-late (Al'vĕ-ō-lāt), *a.* [L *alveolatus*, fr *alveolus*] (*Bot*) Deeply pitted, like a honeycomb.

Al've-ole (-ōl), *n* Same as ALVEOLUS.

Al-ve'o-li-form (Al-vē'ō-lĭ-fôrm), *a.* [L *alveolus* + *-form*] Having the form of alveoli, or little sockets, cells, or cavities

‖ **Al-ve'o-lus** (Al-vē'ō-lŭs), *n*, *pl* ALVEOLI (-lī). [L, a small hollow or cavity, dim of *alveus* cf. F. *alvéole.* See ALVEARY] **1.** A cell in a honeycomb

2 (*Zool*) A small cavity in a coral, shell, or fossil.

3 (*Anat*) A small depression, sac, or vesicle, as the socket of a tooth, the air cells of the lungs, the ultimate saccules of glands, etc

‖ **Al've-us** (Al'vĕ-ŭs), *n.*, *pl.* ALVEI (-ī) [L] The channel of a river. *Weale*

Al'vine (Al'vĭn *or* -vīn), *a* [L. *alvus* belly cf F *alvin*] Of, from, in, or pertaining to, the belly or the intestines, as, *alvine* discharges, *alvine* concretions

Am'i-an'thoid (-thoid), *a* [*Amianthus* + *-oid*; cf. F. *amiantoide.*] Resembling amianthus

Am'i-an'thus (-thŭs), *n.* [L *amiantus*, Gr ἀμίαντος λίθος (lit., unsoiled stone) a greenish stone, like asbestus, ἀ priv + μιαίνειν to stain, to defile, so called from its incombustibility] (*Min*) Earth flax, or mountain flax, a soft silky variety of asbestus.

Am'ic (ăm'ĭk), *a.* [L *ammonia* + *-ic*] (*Chem*) Related to, or derived from, ammonia, — used chiefly as a suffix, as, *amic* acid, phosphamic acid

Amic acid (*Chem*), one of a class of nitrogenized acids somewhat resembling amides.

Am'i-ca-bil'i-ty (ăm'ĭ-kȧ-bĭl'ĭ-tў), *n* The quality of being amicable, friendliness, amicableness *Ash*

Am'i-ca-ble (ăm'ĭ-kȧ-b'l), *a* [L. *amicabilis*, fr *amicus* friend, fr. *amare* to love See AMIABLE] Friendly, proceeding from, or exhibiting, friendliness, after the manner of friends; peaceable, as, an *amicable* disposition, or arrangement.

That which was most remarkable in this contest was the *amicable* manner in which it was managed. *Prideaux*

Amicable action (*Law*), an action commenced and prosecuted by amicable consent of the parties, for the purpose of obtaining a decision of the court on some matter of law involved in it. *Bouvier. Burrill.* — **Amicable numbers** (*Math.*), two numbers, each of which is equal to the sum of all the aliquot parts of the other.

Syn. — Friendly; peaceable; kind; harmonious. — AMICABLE, FRIENDLY. Neither of these words denotes any great warmth of affection, since *friendly* has by no means the same strength as its noun *friendship*. It does, however, imply something of real cordiality; while *amicable* supposes very little more than that the parties referred to are not disposed to quarrel. Hence, we speak of *amicable* relations between two countries, an *amicable* adjustment of difficulties. "Those who entertain *friendly* feelings toward each other can live *amicably* together."

Am'i-ca-ble-ness (ăm'ĭ-kȧ-b'l-nĕs), *n.* The quality of being amicable, amicability.

Am'i-ca-bly, *adv.* In an amicable manner.

Am'ice (ăm'ĭs), *n* [OE. *amyse*, prob. for *amyt*, OF. *amit, ameit*, fr. L *amictus* cloak, the word being confused with *amice, almuce*, a hood or cape. See next word.] A square of white linen worn at first on the head, but now about the neck and shoulders, by priests of the Roman Catholic Church while saying Mass.

☞ Examples of the use of the words *amice*, a square of linen, and *amice, ames*, or *amyss*, a hood or cape, show confusion between them from an early date.

Am'ice, *n.* [OE. *amuce, amisse*, OF. *almuce, aumuce*, F *aumusse*, LL. *almucium, almucia, aumucia* of unknown origin; cf. G *mütze* cap, prob. of the same origin. Cf. MOZETTA] (*Eccl*) A hood, or cape with a hood, made of or lined with gray fur, formerly worn by the clergy; — written also *amess, amyss*, and *almuce*

A-mid' (ȧ-mĭd'), *prep.* See AMIDST

Am'ide (ăm'ĭd *or* ăm'ĭd; 277), *n.* [*Ammonia* + *-ide.*] (*Chem.*) A compound formed by the union of amidogen with an acid element or radical. It may also be regarded as ammonia in which one or more hydrogen atoms have been replaced by an acid atom or radical.

Acid amide, a neutral compound formed by the substitution of the amido group for hydroxyl in an acid.

Am'i-din (ăm'ĭ-dĭn), *n* [Cf. F. *amidine*, fr. *amidon* starch, fr. L. *amylum*, Gr. ἄμυλον fine meal, neut. of ἄμυλος not ground at the mill, — hence, of the finest meal; ἀ priv. + μυλος, μύλη, mill See MEAL] (*Chem.*) Starch modified by heat so as to become a transparent mass, like horn. It is soluble in cold water

A-mi'do (ȧ-mī'dō), *a.* [From AMIDE.] (*Chem.*) Containing, or derived from, amidogen.

Amido acid, an acid in which a portion of the nonacid hydrogen has been replaced by the amido group. The amido acids are both basic and acid. — **Amido group**, amidogen, NH_2.

A-mid'o-gen (ȧ-mĭd'ō-jĕn), *n.* [*Amide* + *-gen*] (*Chem.*) A compound radical, NH_2, not yet obtained in a separate state, which may be regarded as ammonia from the molecule of which one of its hydrogen atoms has been removed; — called also the *amido group*, and in composition represented by the form *amulo.*

A-mid'ships (ȧ-mĭd'shĭps), *adv.* (*Naut*) In the middle of a ship, with regard to her length, and sometimes also her breadth. *Totten.*

A-midst' (ȧ-mĭdst'), } *prep* [OE *amidde, amiddes*,
A-mid' (ȧ-mĭd'), } *on midden*, AS *on middan, on middum*, in the middle, fr *midde* the middle The *s* is an adverbial ending, originally marking the genitive, the *t* is a later addition, as in *whilst, amongst, alongst* See MID] In the midst or middle of, surrounded or encompassed by; among. "This fair tree *amidst* the garden" "Unseen *amid* the throng." "*Amidst* thick clouds" *Milton* "*Amidst* acclamations." "*Amidst* the splendor and festivity of a court" *Macaulay*

But rather famish them *amid* their plenty *Shak*

Syn. — AMIDST, AMONG These words differ to some extent from each other, as will be seen from their etymology. *Amidst* denotes in the *midst* or middle of, and hence surrounded by, as, this work was written *amidst* many interruptions. *Among* denotes a mingling or intermixing with distinct or separable objects, as, "He fell *among* thieves." "Blessed art thou *among* women." Hence, we say, *among* the moderns, *among* the ancients, *among* the thickest of the trees, *among* these considerations, *among* the reasons I have to offer. *Amid* and *amidst* are commonly used when the idea of separate or distinguishable objects is not prominent Hence, we say, they kept on *amidst* the storm, *amidst* the gloom, he was sinking *amidst* the waves, he persevered *amidst* many difficulties; in none of which cases could *among* be used. In like manner, Milton speaks of Abdiel, —

The seraph Abdiel, faithful found;
Among the faithless faithful only he,

because he was then considered as one of the angels. But when the poet adds, —

From *amidst* them forth he passed,

we have rather the idea of the angels as a collective body.

Those squalid cabins and uncleared woods *amidst* which he was born. *Macaulay*

Am'ine (ăm'ĭn *or* ăm'ēn; 277), *n.* [*Ammonia* + *-ine.*] (*Chem*) One of a class of strongly basic substances derived from ammonia by replacement of one or more hydrogen atoms by a basic atom or radical.

Am'i-oid (ăm'ĭ-oid), *a.* (*Zoöl*) Like or pertaining to the Amioidei. — *n.* One of the Amioidei.

Am'yl (ăm'ĭl), *n.* [L. *amylum* starch + *-yl.* Cf. AMIDIN] (*Chem*) A hydrocarbon radical, C_5H_{11}, of the paraffine series found in amyl alcohol or fusel oil, etc.

Am'y-la'ceous (ăm'ĭ-lā'shŭs), *a* [L *amylum* starch, Gr *ἄμυλον* See AMIDIN] Pertaining to starch, of the nature of starch starchy

Am'y-late (ăm'ĭ-lāt), *n* (*Chem*) A compound of the radical amyl with oxygen and a positive atom or radical

Am'y-lene (ăm'ĭ-lēn), *n* (*Chem.*) One of a group of metameric hydrocarbons, C_5H_{10}, of the ethylene series. The colorless, volatile, mobile liquid commonly called amylene is a mixture of different members of the group

A-myl'ic (ȧ-mĭl'ĭk), *a* (*Chem*) Pertaining to, or derived from, amyl, as, *amylic* ether

Amylic alcohol (*Chem.*), one of the series of alcohols, a transparent, colorless liquid, having a peculiar odor. It is the hydroxide of amyl — **Amylic fermentation** (*Chem*), a process of fermentation in starch or sugar in which amylic alcohol is produced *Gregory.*

Am'y-lo-bac'ter (ăm'ĭ-lō-băk'tẽr), *n.* [L. *amylum* starch + NL *bacterium* See BACTERIUM.] (*Biol*) A microörganism (*Bacillus amylobacter*) which develops in vegetable tissue during putrefaction. *Sternberg.*

Am'y-loid (ăm'ĭ-loid), **Am'y-loid'al** (-loid'ăl), *a.* [L. *amylum* starch + *-oid*] Resembling or containing amyl, starchlike

Amyloid degeneration (*Med.*), a diseased condition of various organs of the body, produced by the deposit of an albuminous substance, giving a blue color with iodine and sulphuric acid, — called also *waxy* or *lardaceous degeneration*

Am'y-loid (ăm'ĭ-loid), *n.* **1.** A non-nitrogenous starchy food; a starchlike substance.

2. (*Med.*) The substance deposited in the organs in amyloid degeneration.

Am'y-lo-lyt'ic (ăm'ĭ-lō-lĭt'ĭk), *a.* [Gr. ἄμυλον starch + λυτικός solvent, λύειν to dissolve.] (*Physiol*) Effecting the conversion of starch into soluble dextrin and sugar; as, an *amylolytic* ferment *Foster.*

Am'y-lose' (-lōs'), *n.* (*Chem.*) One of the starch group ($C_6H_{10}O_5$)$_n$ of the carbohydrates, as, starch, arabin, dextrin, cellulose, etc.

Am'y-ous (ăm'ĭ-ŭs), *a.* [Gr. ἄμυος.] (*Med.*) Wanting in muscle; without flesh.

Am'yss (ăm'ĭs), *n.* Same as AMICE, a hood or cape.

An (ăn). [AS *ān* one, the same word as the numeral. See ONE, and cf. A.] This word is properly an *adjective*, but is commonly called the *indefinite article*. It is used before nouns of the singular number only, and signifies *one*, or *any*, but somewhat less emphatically. In such expressions as "twice *an* hour," "once *an* age," "a shilling *an* ounce" (see 2d A, 2), it has a distributive force, and is equivalent to *each*, *every*.

☞ *An* is used before a word beginning with a vowel sound; as, *an* enemy, *an* hour. It is also often used before *h sounded*, when the accent of the word falls on the second syllable; as, *an* historian, *an* hyena, *an* heroic deed. Many writers use *a* before *h* in such positions. Anciently *an* was used before consonants as well as vowels.

A-nal'cime (ȧ-năl'sĭm), *n.* [Gr ἀν priv. + ἄλκιμος strong, ἀλκή strength: cf. F. *analcime*] (*Min*) A white or flesh-red mineral, of the zeolite family, occurring in isometric crystals. By friction, it acquires a *weak* electricity; hence its name.

A-nal'cite (-sīt), *n.* [Gr. ἀναλκής weak.] Analcime.

An'a-lec'tic (ăn'ȧ-lĕk'tĭk), *a* Relating to analects; made up of selections; as, an *analectic* magazine.

An'a-lects (ăn'ȧ-lĕkts), } *n. pl* [Gr. ἀνάλεκτα, fr.
‖ An'a-lec'ta (ăn'ȧ-lĕk'tȧ), } ἀναλέγειν to collect; ἀνά + λέγειν to gather.] A collection of literary fragments.

‖ An'a-lem'ma (-lĕm'mȧ), *n* [L *analemma* a sun dial on a pedestal, showing the latitude and meridian of a place, Gr. ἀνάλημμα a support, or thing supported, a

sun dial, fr. *ἀναλαμβάνειν* to take up; *ἀνά* + *λαμβάνειν* to take.] **1.** (*Geom.*) An orthographic projection of the sphere on the plane of the meridian, the eye being supposed at an infinite distance, and in the east or west point of the horizon.

2. An instrument of wood or brass, on which this projection of the sphere is made, having a movable horizon or cursor; — formerly much used in solving some common astronomical problems.

3. A scale of the sun's declination for each day of the year, drawn across the torrid zone on an artificial terrestrial globe.

‖ **An'a-lep'sis** (ăn'ă-lĕp'sĭs), } **An'a-lep'sy** (ăn'ă-lĕp'sĭ), } *n.* [Gr. *ἀνάληψις* a taking up, or again, recovery, from *ἀναλαμβανειν*. See ANALEMMA.] (*Med.*) (*a*) Recovery of strength after sickness. (*b*) A species of epileptic attack, originating from gastric disorder

An'a-lep'tic (-lĕp'tĭk), *a.* [Gr. *ἀναληπτικός* restorative: cf. F. *analeptique*. See ANALEPSIS.] (*Med.*) Restorative; giving strength after disease. — *n.* A restorative

‖ **An'al-ge'si-a** (ăn'ăl-jē'sĭ-ă), *n.* [NL., fr. Gr *ἀναλγησία*, *ἀν* priv. + *ἄλγησις* sense of pain] (*Med.*) Absence of sensibility to pain. *Quain*

An'al-lag-mat'ic (ăn'ăl-lăg-măt'ĭk), *a.* [Gr. *ἀν* priv. + *ἀλλαγμα* a change, fr *ἀλλάσσειν* to change] (*Math.*) Not changed in form by inversion.

Anallagmatic curves, a class of curves of the fourth degree which have certain peculiar relations to circles, — sometimes called *bicircular quartics*. — **Anallagmatic surfaces**, a certain class of surfaces of the fourth degree.

An'al-lan-toi'ic (ăn'ăl-lăn-toĭ'ĭk), *a* (*Anat.*) Without, or not developing, an allantois.

‖ **An'al-lan-toid'e-a** (ăn'ăl-lăn-toĭd'ē-ă), *n. pl* [Gr *ἀν* priv. + E. *allantoidea*] (*Zool.*) The division of Vertebrata in which no allantois is developed. It includes amphibians, fishes, and lower forms

A-nal'o-gal (ă-năl'ō-gal), *a* Analogous. [*Obs.*] *Donne*

An'a-log'ic (ăn'ă-lŏj'ĭk), *a.* [See ANALOGOUS.] Of or belonging to analogy *Geo. Eliot*

An'a-log'ic-al (-lŏj'ĭ-kal), *a* **1** Founded on, or of the nature of, analogy, expressing or implying analogy.

When a country which has sent out colonies is termed the mother country, the expression is *analogical* *J. S. Mill*

2. Having analogy, analogous *Sir M. Hale*

An'a-log'ic-al-ly, *adv.* In an analogical sense, in accordance with analogy, by way of similitude

A prince is *analogically* styled a pilot, being to the state as a pilot is to the vessel *Berkeley*

An'a-log'ic-al-ness, *n* Quality of being analogical

A-nal'o-gism (ă-năl'ō-jĭz'm), *n* [Gr *ἀναλογισμός* course of reasoning, fr *ἀναλογίζεσθαι* to think over, to calculate.] **1** (*Logic*) An argument from the cause to the effect; an *a priori* argument. *Johnson*

2. Investigation of things by the analogy they bear to each other *Crabb*

A-nal'o-gist (-jĭst), *n.* One who reasons from analogy; one who seeks analogies

A-nal'o-gize (-jīz), *v. i.* [Gr *ἀναλογίζεσθαι*.] To explain, or represent, by analogy *Cheyne*

A-nal'o-gize, *v. i* To employ, or reason by, analogy

‖ **A-nal'o-gon** (-gŏn), *n.* [Gr *ἀναλογον*.] Analogue

A-nal'o-gous (ă-năl'ō-gŭs), *a.* [L. *analogus*, Gr. *ἀνάλογος* according to a due ratio, proportionate; *ἀνά* + *λόγος* ratio, proportion. See LOGIC.] Having analogy, corresponding to something else; bearing some resemblance or proportion, — often followed by *to*

Analogous tendencies in arts and manners *De Quincey*

Decay of public spirit, which may be considered *analogous* to natural death *J. H. Newman*

Analogous pole (*Pyroelect.*), that pole of a crystal which becomes positively electrified when heated.

Syn. — Correspondent, similar, like

— **A-nal'o-gous-ly**, *adv.* — **A-nal'o-gous-ness**, *n*

An'a-logue (ăn'ă-lŏg, 11b), *n* [F., fr Gr *ἀναλογον*] **1.** That which is analogous to, or corresponds with, some other thing

The vexatious tyranny of the individual despot meets its *analogue* in the insolent tyranny of the many *I. Taylor*

2 (*Philol.*) A word in one language corresponding with one in another, an analogous term, as, the Latin "pater" is the *analogue* of the English "father"

3. (*Nat. Hist.*) (*a*) An organ which is equivalent in its functions to a different organ in another species or group, or even in the same group, as, the gill of a fish is the *analogue* of a lung in a quadruped, although the two are not of like structural relations. (*b*) A species in one genus or group having its characters parallel, one by one, with those of another group. (*c*) A species or genus in one country closely related to a species of the same genus, or a genus of the same group, in another such species are often called *representative species*, and such genera, *representative genera*. *Dana.*

A-nal'o-gy (ă-năl'ō-jĭ), *n.*; *pl* ANALOGIES (-jĭz). [L. *analogia*, Gr *ἀναλογια*, fr *ἀναλογος* cf. F. *analogie*. See ANALOGOUS.] **1** A resemblance of relations, an agreement or likeness between things in some circumstances or effects, when the things are otherwise entirely different. Thus, learning *enlightens* the mind, because it is to the mind what *light* is to the eye, enabling it to discover things before hidden.

Followed by *between*, *to*, or *with*; as, there is an *analogy between* these objects, or one thing has an *analogy to* or *with* another.

☞ *Analogy* is very commonly used to denote similarity or essential resemblance; but its specific meaning is a similarity of *relations*, and in this consists the difference between the argument from *example* and that from *analogy*. In the former, we argue from the mere similarity of two things, in the latter, from the similarity of their *relations*. *Karslake.*

2. (*Biol.*) A relation or correspondence in function, between organs or parts which are decidedly different.

3 (*Geom.*) Proportion, equality of ratios.

4. (*Gram.*) Conformity of words to the genius, structure, or general rules of a language; similarity of origin, inflection, or principle of pronunciation, and the like, as opposed to *anomaly*. *Johnson.*

An'a-lyse (ăn'ă-līz), *v*, **An'a-ly'ser** (-lī'zĕr), *n*, etc. Same as ANALYZE, ANALYZER, etc.

A-nal'y-sis (ă-năl'ĭ-sĭs), *n*, *pl.* ANALYSES (-sēz). [Gr. *ἀνάλυσις*, fr *ἀναλυειν* to unloose, to dissolve, to resolve into its elements, *ἀνά* up + *λύειν* to loose. See LOOSE.] **1.** A resolution of anything, whether an object of the senses or of the intellect, into its constituent or original elements; an examination of the component parts of a subject, each separately, as the words which compose a sentence, the tones of a tune, or the simple propositions which enter into an argument. It is opposed to *synthesis*.

2. (*Chem.*) The separation of a compound substance, by chemical processes, into its constituents, with a view to ascertain either (*a*) what elements it contains, or (*b*) how much of each element is present. The former is called *qualitative*, and the latter *quantitative analysis*.

3. (*Logic*) The tracing of things to their source, and the resolving of knowledge into its original principles

4. (*Math.*) The resolving of problems by reducing the conditions that are in them to equations

5. (*a*) A syllabus, or table of the principal heads of a discourse, disposed in their natural order. (*b*) A brief, methodical illustration of the principles of a science In this sense it is nearly synonymous with *synopsis*

6. (*Nat. Hist.*) The process of ascertaining the name of a species, or its place in a system of classification, by means of an analytical table or key

Ultimate, Proximate, Qualitative, Quantitative, and **Volumetric analysis** (*Chem.*) See under ULTIMATE, PROXIMATE, QUALITATIVE, etc.

An'a-lyst (ăn'ă-lĭst), *n.* [F. *analyste* See ANALYSIS.] One who analyzes; formerly, one skilled in algebraical geometry; now commonly, one skilled in chemical analysis.

An'a-lyt'ic (ăn'ă-lĭt'ĭk), } *a* [Gr *ἀναλυτικός* cf F **An'a-lyt'ic-al** (-ĭ-kal), } *analytique*. See ANALYSIS.] Of or pertaining to analysis, resolving into elements or constituent parts, as, an *analytical* experiment, *analytic* reasoning, — opposed to *synthetic*

Analytical or **coordinate geometry**. See under GEOMETRY — **Analytic language**, a noninflectional language or one not characterized by grammatical endings. - **Analytical table** (*Nat. Hist.*), a table in which the characteristics of the species or other groups are arranged so as to facilitate the determination of their names.

An'a-lyt'ic-al-ly, *adv* In an analytical manner

An'a-lyt'ics (-ĭks), *n* The science of analysis.

An'a-lyt'za-ble (-lī'zȧ-b'l), *a* That may be analyzed

An'a-ly-za'tion (-ĭ-zā'shŭn), *n.* The act of analyzing, or separating into constituent parts; analysis

An'a-lyze (ăn'ă-līz), *v. t.* [*imp. & p. p.* ANALYZED (-līzd), *p. pr. & vb. n.* ANALYZING.] [Cf F. *analyser* See ANALYSIS.] To subject to analysis, to resolve (anything complex) into its elements, to separate into the constituent parts, for the purpose of an examination of each separately, to examine in such a manner as to ascertain the elements or nature of the thing examined, as, to *analyze* a fossil substance; to *analyze* a sentence or a word, to *analyze* an action to ascertain its morality.

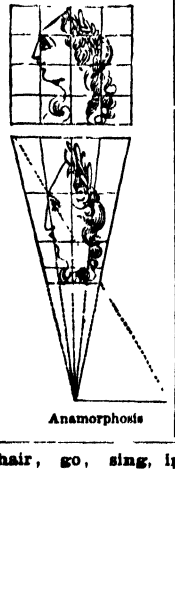
No one, I presume, can *analyze* the sensations of pleasure or pain *Darwin*

An'a-ly'zer (-lī'zĕr), *n* **1** One who, or that which, analyzes.

2 (*Opt.*) The part of a polariscope which receives the light after polarization, and exhibits its properties

An'a-mese' (ăn'ă-mēz'), *a* Of or pertaining to Anam, in southeastern Asia — *n* A native of Anam

‖ **An'am-ne'sis** (ăn'ăm-nē'sĭs), *n* [Gr *ἀναμνησις*, fr *ἀναμιμνήσκειν* to remind, recall to memory, *ἀνά* + *μιμνησκειν* to put in mind] (*Rhet.*) A recalling to mind, recollection



An'am-nes'tic (-nĕs'tĭk), *a* [Gr *ἀναμνηστικός*.] Aiding the memory, as, *anamnestic* remedies.

An-am'ni-ot'ic (ăn-ăm'nĭ-ŏt'ĭk), *a* (*Anat.*) Without, or not developing, an amnion

An'a-mor'phism (ăn'ă-môr'fĭz'm), *n.* [Gr *ἀνά* again + *μορφή* form] **1.** A distorted image

2 (*Biol.*) A gradual progression from one type to another, generally ascending *Huxley.*

An'a-mor'pho-sis (ăn'ă-môr'fō-sĭs *or* -môr-fō'sĭs), *n* [Gr. *ἀναμόρφωσις*, fr *ἀναμορφοῦν* to form anew, *ἀνά* again + *μορφοῦν* to form, *μορφη* form]

Anamorphosis

1 (*Persp.*) A distorted or monstrous projection or representation of an image on a plane or curved surface, which, when viewed from a certain point, or as reflected from a curved mirror or through a polyhedron, appears regular and in proportion; a deformation of an image

2 (*Biol.*) Same as ANAMORPHISM, 2

3 (*Bot.*) A morbid or monstrous development, or change of form, or degeneration.

An'a-mor'pho-sy (-sĭ), *n.* Same as ANAMORPHOSIS

A-nan' (ă-năn'), *interj.* [See ANON.] An expression equivalent to What did you say? Sir? Eh? [*Obs.*] *Shak.*

‖ **A-na'nas** (ă-nā'nȧs), *n.* [Sp. *ananas*, from the native American name.] (*Bot.*) The pineapple (*Ananassa sativa*)

An-an'drous (ăn-ăn'drŭs), *a.* [Gr. *ἀν* priv. + *ἀνήρ* a man.] (*Bot.*) Destitute of stamens, as certain female flowers.

An-an'gu-lar (ăn-ăŋ'gŭ-lĕr), *a.* [Gr. *ἀν* priv. + E. *angular*.] Containing no angle. [*R.*]

An-an'ther-ous (ăn-ăn'thĕr-ŭs), *a.* [Gr. *ἀν* priv. + E. *anther*.] (*Bot.*) Destitute of anthers. *Gray.*

An-an'thous (-thŭs), *a.* [Gr. *ἀν* priv. + *ἄνθος* a flower.] (*Bot.*) Destitute of flowers; flowerless.

An'a-pest (ăn'ă-pĕst), **An'a-pes'tic** (-pĕs'tĭk). Same as ANAPEST, ANAPESTIC.

An'a-pest (ăn'ă-pĕst), *n.* [L. *anapaestus*, Gr. *ἀνάπαιστος* an anapest, *i. e.*, a dactyl reversed, or, as it were, *struck back*, fr. *ἀναπαιειν*; *ἀνά* back + *παίειν* to strike.] **1** (*Pros.*) A metrical foot consisting of three syllables, the first two short, or unaccented, the last long, or accented (⏑ ⏑ –), the reverse of the *dactyl*. In Latin *dĕ-ă-dās*, and in English *in-ter-vene'*, are examples of anapests.

2 A verse composed of such feet

An'a-pes'tic (ăn'ă-pĕs'tĭk), *a.* [L *anapaesticus*, Gr. *ἀναπαιστικος*.] Pertaining to an anapest, consisting of an anapest or of anapests, as, an *anapestic* meter, foot, verse — *n.* Anapestic measure or verse.

An'a-pes'tic-al (-tĭ-kal), *a* Anapestic

‖ **A-naph'o-ra** (ă-năf'ō-rā), *n* [L, fr Gr. *ἀναφορά*, fr. *ἀναφέρειν* to carry up or back, *ἀνα* + *φερειν* to carry.] (*Rhet.*) A repetition of a word or of words at the beginning of two or more successive clauses.

‖ **An-aph'ro-dis'i-a** (ăn-ăf'rō-dĭz'ĭ-ă), *n.* [NL., fr. Gr *ἀν* priv + *ἀφροδισια* sexual pleasure, Ἀφροδιτη the goddess of love.] (*Med.*) Absence of sexual appetite.

An-aph'ro-dis'i-ac (-ăk), *a.* & *n* [Gr *ἀν* priv + *ἀφροδισιακός* pertaining to venery.] (*Med.*) Same as ANTAPHRODISIAC. *Dunglison*

An-aph'ro-dit'ic (-dĭt'ĭk), *a* [Gr. *ἀναφρόδιτος* without love] (*Biol.*) Produced without concourse of sexes.

An'a-plas'tic (ăn'ă-plăs'tĭk), *a* Of or pertaining to anaplasty

An'a-plas'ty (-plăs'tĭ), *n.* [Gr *ἀνά* again + *πλάσσειν* to form cf F *anaplastie*] (*Surg.*) The art or operation of restoring lost parts or the normal shape by the use of healthy tissue

An'a-ple-rot'ic (-plē-rŏt'ĭk), *a* [L *anapleroticus*, fr Gr *ἀναπληροῦν* to fill up, *ἀνα* + *πληροῦν* to fill.] (*Med.*) Filling up, promoting granulation of wounds or ulcers. — *n* A remedy which promotes such granulation

A-nap'no-graph (ă-năp'nō-grăf), *n* [Gr *ἀναπνοη* respiration + *-graph*] A form of spirometer

An'ap-no'ic (ăn'ăp-nō'ĭk), *a* [Gr. *ἀναπνοή* respiration.] (*Med.*) Relating to respiration.

An-ap'o-deic'tic (ăn-ăp'ō-dīk'tĭk), *a.* [Gr *ἀναποδεικτος*, *ἀν* priv. + *ἀποδεικτός* See APODEICTIC.] Not apodeictic, undemonstrable [*R.*]
